Building customer confidence by providing a wide range of quality products and services through team work.

ABOUT HAVELLS

A company with an unflinching commitment to quality, innovation, and customer satisfaction, Havells India Limited has today emerged as a dominant player in the Fast Moving Electrical Goods industry. The company manufactures a number of products ranging from Cables, Wires and Switchgear in domestic and industrial segments, to Fans, Water Heaters, Small Appliances, Air coolers, Personal Grooming, Home Automation, Switches, LED lighting & fixtures in the consumer facing segments. With the acquisition of Lloyd, and the entry into the Water Purifier category, the company has become a fine example of successful transition and transformation from a Fast Moving Electrical Goods manufacturer to a true Consumer Durables company, steadily spreading its operations across India.

Havells started its operations in the 1970s and since then, the company has used a judicious mix of organic growth and inorganic opportunities to boost revenues and scale up business. The company today owns a range of established and prestigious brands like Havells, Lloyd, Crabtree and Standard that are sold through its extensive network of dealers and retailers spread across the country. Havells has 12 state-of-the-art manufacturing units in the country located at Haridwar, Baddi, Sahibabad, Faridabad, Assam, Alwar and Neemrana. These units manufacture globally acclaimed products, synonymous with excellence and precision.

The company has acquired a number of certifications, like BASEC, UL, ISO 9001, ISO 14001, ISO 18001, ISO 50001 for the Cable Plant, Our Test laboratory has the NABL accreditation for testing of cables and calibration of testing equipment. Today, Havells and its brands have emerged as the preferred choice of electrical products for discerning individuals and industrial consumers both in India and abroad.

The company has a strong domestic presence with 40 offices employing close to 6,500 professionals across the country supported by over 7,600 dealers and distributors with world-class service network in 400 cities across India. Given the enormous size, scale and reach of the operations, Havells today boasts of 415 exclusive brands shop known as Havells Galaxies to provide better shopping experience to our consumers.

Manufacturing Process

Manufacturing of Cables

Cables with Aluminium and Copper conductor and polymer insulation are manufactured at Havells India Ltd. (Cable Works) Alwar. Essentially cables comprise of conductors, insulation, inner-sheath, armour and outersheath. The brief description of the process is mentioned as under:

CONDUCTOR

Havells Cables are available with both aluminum and copper conductors. It is manufactured with solid/Stranded Circular/ Shaped Aluminium / Copper Conductor. Stranding makes Cables flexible and easy to handle while shaping makes them compact.

Compaction is provided to all stranded conductor constructions as under:

1. Circular Conductor With one wire in the centre conductor contains 6, 12, 18, 24, 30... wire layers in either unilay or opposite helical directions. The conductor is sized upto 92% compaction.
2. Shaped Conductors In all multicore cables from 16 SQ. mm size, conductors are "shaped". Compaction degree in multicore power cables is upto 92%.
3. Segmental Conductor As a special case Havells cables of 1600 SQ. mm are made up of segmental conductors.

The conductor is manufactured in equal segments and compacted, then laid together. This reduces A.C. losses in the large sized conductor, which are due to skin and proximity effects.

Havells has special construction of conductor to suggest to its customer for meeting their specific need.

Havells copper conductor cables are of the same construction that of cables with Aluminium conductor except for high tensile strength, superior conductivity, better flexibility and ease of jointing, copper cables are used in control, instrumentation, winding, submarine, mining and ship wiring etc. etc applications.

All conductors for Havells cables are manufactured strictly in accordance with National and International specifications.

National specifications IS 8130

International specification IEC 60228 / BS 6360

DIELECTRIC INSULATION

Insulation for Havells cables is strictly as per National and International specifications.

Havells cables are designed and manufactured with polymer dielectrics to bear thermal and thermomechanical stresses safely at continuous normal and short circuit temperature conditions.

Havells cables are available with both thermoplastic & thermo setting insulations.

- PVC Cables Thermoplastic dielectric

- XLPE Cables Thermo setting dielectric

Havells PVC cables use PVC compounds that take care of over load and short circuit current with both coarse & fine protection systems.

Havells XLPE cables use XLPE compound with anti oxidant stabilizers and traces of aromatic polynuclear hydrocarbon. Thus improving electrical treeing characteristics and mechanical strength of insulation.

Havells cables are friendly during continuous, emergency and short circuit conditions.

Though there is no change in basic design of Havells cables yet the latest manufacturing process gives improved reliability and compactness to cables. The relative thermal expansion during short circuit between dielectric and conductor is therefore limited to minimum both in PVC & XLPE, thus limiting displacement of cores in cables during short circuit.

Insulation for Havells Cables are strictly manufactured and applied over conductor in accordance with National and International specifications:

National Specification IS 5831/IS 7098

International Specifications BS 6746/BS 5467/IEC 60502

SCREENING

XLPE Cables with rated voltage over 3300 V shall be provided with conductor and insulation screening as follows:

Conductor Conductor shall be screened with extruded

Screen Semiconducting compound as per IS 7098 Part 2.

Insulation

Screen

Insulation screening shall consist of non-metallic

Part in combination with metallic part. Non metallic part shall consist of either semi conducting compound tape applied helically or extruded layer of semi conducting compound, applied directly over insulation. Over this, metallic part (copper tape) shall be applied helically with overlap as per IS 7098 Part 2.

To avoid the cavities and voids formation in dielectric particularly on bending operation of cable, perfect bonding of insulation and screening is required. To ensure this Havells applying conductor screen, insulation and insulation screen (non-metallic part) in one operation through tripple extrusion.

LAYING UP

Cores are tested on line during production both for physical and electrical characteristics. Control is observed within tight tolerance limits for dimensions in case of PVC/XLPE insulation. For multicore cables cores are laid up on our latest laying up machine equipped with sector correction equipment. In case of XLPE insulated cores the same are cured so as to impart the requisite characteristics both electrical and mechanical and then are laid up.

INNERSHEATH

Laid up cables are provided with inner sheath with high quality of PVC which acts as bedding for steel wire / strip armouring. Wherever required, filler cords are provided to maintain the circularity to laid up cables.

In Havells Cable-polymers used for inner sheath are softer than insulation or outer sheath & are compatible with temperature ratings of cables & do not have deleterious effect on any other component of cable.

Inner sheath is applied either with extrusion or by wrapping. In Havells Cables though the inner sheath is closely applied on the laid up cores, same can be stripped with ease without damaging insulation.

The inner sheath dimensions are maintained strictly in accordance with laid down specification .

| | | |
|---------------|-----------------|-----------------------|
| Specification | For PVC Cables | IS 1554 (Part-I & II) |
| | For XLPE Cables | IS 7098 (Part-I & II) |

ARMOURING

Mechanical protection to the cable is provided with armouring. Havells single core cables are armoured with Aluminium or Aluminium alloy wire/strips, thus avoiding magnetic hysteresis losses on A. C. System.

Multicore cables are provided with galvanised steel wire/strips.

Havells cables are provided with galvanised wire armouring, where cables are to run vertically and are subjected to stresses.

Havells Mining cables are armoured with steel wire and tinned copper wires, so as to provide conductivity of armour more than 75% of main conductor of cable.

Havells cables armour wires/strips are of low resistivity material and meet the requirements of IS 3975.

Havells armoured cables are with almost 95% armour coverage.

OUTER SHEATH

All Havells Cables are provided with PVC/polymer outer sheath.

Havells Cables are manufactured with various characteristics of sheathing compounds.

| | |
|-------------------------------------------|------------------------|
| General purpose sheathing Compound | ST1 |
| Heat resistant Compound for sheath (H.R.) | ST2 |
| Fire Retardant Low | IEC 754 Part I |
| Smoke Compound | IEC 60332 Part I & III |
| (FRLS) | IEEE 383 |
| | ASTM-2843 |
| | ASTM-2863 |

Flame Retardant Compound (FR) to EIL Specn.

Ultra Violet Radiations Resistance Compound to ASTM G-53.

Anti Rodent and Anti Termite Compound.

PVC compounds used for Havells Cables are of various grades to meet specifications IS 5831.

Advantage

In order to be identified, Havells Cables have their name embossed/printed/indented on outer sheath at regular intervals on the outer sheath of Havells Cables, Voltage Grade, cable size, trade name & year of manufacture are embossed, as desired.

Cables are sequentially marked for length at every metre throughout its length.

FINAL TESTING

Each Havells Cable is tested for all applicable Routine Tests.

From a lot of Cable one cable of each type is tested for Type tests, as per relevant specifications.

Havells conduct its testing at Havell's India Ltd. cable plant at Alwar for acceptance test as per specification.

Testing of Havells Cables are carried out as per Havells Work Standards for testing, besides applicable standards.

ADVANTAGES OF PVC CABLES

1. A non-hygroscopic insulation almost unaffected by moisture.
2. Non-migration of compound permitting vertical installation.
3. Complete protection against most forms of electrolytic and chemical corrosion.
4. A tough and resilient sheath with excellent fire - resisting qualities.
5. Good ageing characteristics.

ADVANTAGES OF XLPE CABLES

1. Higher Current Rating.
2. Higher Short Circuit Rating.
3. Longer Service Life.
4. For a short time it can withstand maximum 130 °C and is favourable to endure short circuit stresses.
5. It is less sensitive to the setting of the network protection.
6. Because of the thermosetting process taking place due the effect of cross linking, the crack resistance is increased.
7. Due to the chemical cross-linking internal stresses are reduced. Consequently the material is less sensitive during manufacturing process to the setting of the cooling gradient.
8. The thermal resistivity of cross-linked material is favourably low, compared to thermoplastic material.
9. The low dielectric loss is a significant advantage.
10. The excellent mechanical features of the insulation improves the protection against external effects.
11. The resistance of the XLPE to acids, alkalies is outstanding and is often compensating the adverse environmental influences.

NABL Testing Laboratory

Havells India Ltd has emphasised on product quality by demonstrating quality evaluation for wires & cables at international level by obtaining NABL National accreditation board for calibration & testing laboratories for testing & DSIR recognised technology center at cable division. NABL is an autonomous body which is working under the Department of Science & Research Industry (Govt. of India).

National accreditation board for testing and calibration to boast of, it is the first-of-its-kind private facility in India. The lab fully equipped as per international standard to test XLPE cables upto 220 KV grade, PVC cables, Flexible cables, aerial bunched cables, photovoltaic cables, instrumentation cables, fire survival cables.

The lab cover Indian standards, British standard, International electrotechnical commission (IEC) standards, TUV-Germany standards, American society for testing and material (ASTM) standards and Institute of electrical & electronics engineers (IEEE) standards along with eight type of different fire test to demonstrate fire-retardant behavior in cable.

| Energy Cables for Power Supply to Telephone Exchanges / UPS / Battery Backup / Equipments | PVC Flexible Cables upto 1.1 kV grade as per IS 694 Sizes: 1.0 SQ. mm upto 240 SQ. mm Single / Multi Core | Conductor - Stranded / annealed Copper Insulation FR - Flame retardant PVC Insulated industrial cables 1100 V with S3 features FR-LSH PVC Insulated industrial cables 1100 V |    |
| Energy Cables for Power Supply to Telephone Exchanges / UPS / Battery Backup / Equipments | Flexible Cables upto 1.1 kV grade as per IS 694 Sizes: 1.0 SQ. mm upto 240 SQ. mm Single / Multi Core | Conductor - Stranded / annealed Copper Insulation-HFFR Insulated industrial cables 1100 V |   |
| Air Field Lighting Cables | Stranded plain annealed copper, PVC insulated & PVC sheathed of 5 kV grade Sizes: Single core & Two core in 6 SQ.mm, 16 SQ.mm & 25 SQ.mm | Insulation - PVC / XLPE |  |
| FS Wire new | Flexible Cables upto 450/750 V generally to BS 7211 Sizes: 1.0 upto 240 SQ. mm Single Core | Conductor - Stranded Flexible Copper Insulation - Glass mica tape & HFFR Compound |  |

Inside View - Cable Factory

LT POWER & CONTROL CABLE

LT POWER & CONTROL CABLE

**XLPE INSULATED CABLE**

- Higher current rating and emergency overload rating
- Superior short circuit rating
- Low dielectric loss
- Much better insulation resistance
- Resistant to chemical & corrosive gases etc.
- Better resistance to surge currents
- Much longer life of the cables

INSULATED MATERIAL

- XLPE
- PVC

PVC INSULATED CABLE

- High dielectric strength & resistance to DC voltage effects
- High mechanical strength & resistance to abrasion, vibration & ageing
- Resistant to most acids, alkalies, to temporary contact with solvents, oils and liquid fluids
- Flame retardant, does not support combustion and self extinguishing

APPLICABLE STANDARD

- IS 7098 Part-1
- IS 1554 Part-1

Cross-sectional view

Conductor: Solid / Stranded Annealed Bare Copper as per Class-2 of IS 8130; Options: Tinned
 Insulation Material: PVC Type-A OR HR PVC Type-C as per IS 5831; Nominal Insulation Thickness: 0.90 mm
 Core Identification: Upto 5 cores: By colour coding & Above 5 cores: By colour coding / Number printing on cores as per IS 1554 Part-1
 Inner Sheath: PVC Type ST-1 as per IS 5831; Options: PVC Type ST-2/FR Type/FRLS Type
 Armouring: Single Layer of Aluminium Round Wire / Flat Strip
 Outer Sheath: PVC Type ST-1 as per IS 5831; Options: PVC Type ST-2/FR Type/FRLS Type
 Colour of Outer Sheath: Black or any other Colour as per requirement

* Tabulated Approx. Weight of Cable are only for the purpose of guideline for transportation, loading & unloading purpose.

** Refer page no. 55 for normal delivery lengths & packing details.

Cross-sectional view

Conductor Material: Aluminium / Copper as per Class-2 of IS 8130
 Shape of Conductor: For Aluminium Conductor - 4 SQ. mm, 6 SQ. mm & 10 SQ. mm Solid / Stranded Non Compacted Circular, 16 SQ. mm and above - Stranded Compacted Circular
 For Copper Conductor - 4 SQ. mm & 6 SQ. mm Solid / Stranded Non Compacted Circular, 10 SQ. mm and above - Stranded Compacted Circular
 Insulation Material: XLPE (Cross linked polyethylene); Colour: Natural
 Outer Sheath: PVC Type ST-2 as per IS 5831; Options: FR Type/FRLS Type
 Colour of Outer Sheath: Black or any other Colour as per requirement

* Tabulated Approx. Weight of Cable are only for the purpose of guideline for transportation, loading & unloading purpose.

** Refer page no. 55 for normal delivery lengths & packing details.

Cross-sectional view

- Conductor Material: Aluminium / Copper as per Class-2 of IS 8130
 Shape of Conductor: For Aluminium Conductor - 4 SQ. mm, 6 SQ. mm & 10 SQ. mm Solid / Stranded Non Compacted Circular, 16 SQ. mm and above - Stranded Compacted Circular
 For Cu Conductor - 4 SQ. mm & 6 SQ. mm Solid / Stranded Non Compacted Circular, 10 SQ. mm and above - Stranded Compacted Circular
 Insulation Material: XLPE (Cross linked polyethylene); Colour: Natural
 Inner Sheath: PVC Type ST-2 as per IS 5831; Options: FR Type/FRLS Type
 Armouring: Single Layer of Aluminium Round Wire / Flat Strip
 Outer Sheath: PVC Type ST-2 as per IS 5831; Options: FR Type/FRLS Type
 Colour of Outer Sheath: Black or any other Colour as per requirement

* Tabulated Approx. Weight of Cable are only for the purpose of guideline for transportation, loading & unloading purpose.

** Refer page no. 55 for normal delivery lengths & packing details.

Cross-sectional view

Conductor: Solid / Stranded Annealed Bare Copper as per Class-2 of IS 8130; Options: Tinned
Insulation Material: XLPE as per IS 5831; Nominal Insulation Thickness: 0.70 mm
Core Identification: Upto 5 cores: By colour coding & Above 5 cores: By colour coding / Number printing on cores as per IS 7098 Part-1
Inner Sheath: PVC Type ST-2 as per IS 5831; Options: FR Type/FRLS Type
Armouring: Single Layer of Aluminium Round Wire / Flat Strip
Outer Sheath: PVC Type ST-2 as per IS 5831; Options: FR Type/FRLS Type
Colour of Outer Sheath: Black or any other Colour as per requirement

Note: Normal current ratings are given in standard conditions (as given in page no 52, 53), if site conditions are different, current rating should be multiplied by rating factor as given in page no. 52 - 54

HT POWER CABLE

HT POWER CABLE

**HT POWER CABLE**

- High continuous current rating
- Higher short circuit rating
- High emergency load capacity
- Low dielectric loss
- Longer charging currents
- Free from height limitation & maintenance
- Resistant to vibration, moisture, chemical & corrosive gases
- Much longer life of the cable

APPLICABLE STANDARD

- IS 7098 Part-2

Table - 25

Cross-sectional view

1. Conductor: Stranded Compacted Circular Aluminum / Copper as per Class-2 of IS 8130
 2. Conductor Screening: Extruded Semiconducting Compound
 3. Insulation Material: XLPE (Cross linked polyethylene)
 4. Insulation Screening: Extruded Semiconducting Compound followed by helically wrapped Copper Tape
 5. Inner Sheath: Extruded PVC Type ST-2 as per IS 5831; Options: PVC Type ST-2/FR Type/FRLS Type
 6. Armouring: Single layer of Aluminium Round Wire / Flat Strip
 7. Outer Sheath: Extruded PVC Type ST-2 as per IS 5831; Options: PVC Type ST-2/FR Type/FRLS Type
- Colour of Outer Sheath: Black or any other color as per requirement

Note: Normal current ratings are given in standard conditions (as given in page no 52, 53), if site conditions are different, current rating should be multiplied by rating factor as given in page no. 52 - 54

BASIC ASSUMPTION FOR CURRENT RATINGS & RATING FACTORS

SCOPE

The current ratings of cables as indicated in various tables have been calculated on certain assumed conditions.

In actual practice these conditions may be different. Therefore to determine the actual current ratings as per installation conditions, the tabulated ratings shall be multiplied with appropriate factors

a) Basic assumption for current ratings

i) Maximum permissible temperature - 90 °C for XLPE insulation, 70 °C for general purpose PVC, 85 °C for HR PVC

ii) Ground/Duct temperature - 30 °C

iii) Ambient temperature - 40 °C

iv) Thermal resistivity of soil - 150 °C.cm/W

v) Thermal resistivity of Dielectric 650 °C.cm/W for PVC, 350 °C.cm/W for XLPE

vi) Single core cables installed in one circuit in following arrangement

OR

vii) Multicore cables installed in single circuit

| Voltage Grade | Depth of Laying |
|-----------------|-----------------|
| 1.1 kV cables | 750 mm |
| 3.3 kV to 11 kV | 900 mm |
| More than 11 kV | 1050 mm |

b) Rating Factors

i) Rating factors related to variation in ambient air temperature

| Air Temperature in °C | 20 °C | 25 °C | 30 °C | 35 °C | 40 °C | 45 °C | 50 °C | 55 °C |
|-----------------------|--------|-------|-------|-------|-------|-------|-------|-------|
| Normal PVC | 1.32 | 1.25 | 1.16 | 1.09 | 1.00 | 0.90 | 0.80 | 0.80 |
| Rating factors | HR PVC | 1.22 | 1.17 | 1.12 | 1.06 | 1.00 | 0.94 | 0.87 |
| | XLPE | 1.20 | 1.16 | 1.11 | 1.06 | 1.00 | 0.95 | 0.88 |

ii) Rating factors related to variation in ground temperature

| Air Temperature in °C | 15 °C | 20 °C | 25 °C | 30 °C | 35 °C | 40 °C | 45 °C | 50 °C |
|-----------------------|--------|-------|-------|-------|-------|-------|-------|-------|
| Normal PVC | 1.17 | 1.12 | 1.06 | 1.00 | 0.94 | 0.87 | 0.79 | 0.71 |
| Rating factors | HR PVC | 1.13 | 1.09 | 1.04 | 1.00 | 0.95 | 0.90 | 0.85 |
| | XLPE | 1.12 | 1.08 | 1.04 | 1.00 | 0.96 | 0.91 | 0.87 |

iii) Rating factors related to variation in ground thermal resistivity of soil for 3 single core cables laid direct in ground. (Average value)

| Thermal Resistivity in °C.cm/W | 100 | 120 | 150 | 200 | 250 | 300 |
|--------------------------------|------|------|------|------|------|------|
| Rating factors | 1.20 | 1.10 | 1.00 | 0.90 | 0.81 | 0.74 |

iv) Rating factors related to variation in ground thermal resistivity of soil for multi core cables laid direct in ground. (Average value)

| Thermal Resistivity in °C.cm/W | 100 | 120 | 150 | 200 | 250 | 300 |
|--------------------------------|------|------|------|------|------|------|
| Rating factors | 1.16 | 1.08 | 1.00 | 0.90 | 0.82 | 0.76 |

v) Rating factors related to variation in depth of laying for 1.1 kV cables

1. For cross-sectional area of conductor < 25 SQ. mm

| Depth of laying (cm) > | 75 | 90 | 105 | 120 | 150 | 180 & Above |
|------------------------|------|------|------|------|------|-------------|
| Rating factors | 1.00 | 0.99 | 0.98 | 0.97 | 0.96 | 0.95 |

2. For cross-sectional area of conductor 25 SQ. mm to 300 SQ. mm

| Depth of laying (cm) > | 75 | 90 | 105 | 120 | 150 | 180 & Above |
|------------------------|------|------|------|------|------|-------------|
| Rating factors | 1.00 | 0.98 | 0.97 | 0.96 | 0.94 | 0.93 |

3. For cross-sectional area of conductor above 300 SQ. mm

| Depth of laying (cm) > | 75 | 90 | 105 | 120 | 150 | 180 & Above |
|------------------------|------|------|------|------|------|-------------|
| Rating factors | 1.00 | 0.97 | 0.96 | 0.95 | 0.92 | 0.91 |

vi) Rating factors related to variation in depth of laying for 3.3 kV to 11 kV cables

| Depth of laying (cm) > | 75 | 90 | 105 | 120 | 150 | 180 & Above |
|------------------------|----|------|------|------|------|-------------|
| Rating factors | - | 1.00 | 0.99 | 0.98 | 0.96 | 0.95 |

vii) Rating factors related to variation in depth of laying for above 11 kV cables

| Depth of laying (cm) > | 75 | 90 | 105 | 120 | 150 | 180 & Above |
|------------------------|----|----|------|------|------|-------------|
| Rating factors | - | - | 1.00 | 0.99 | 0.98 | 0.96 |

BASIC ASSUMPTION FOR CURRENT RATINGS & RATING FACTORS

Group Rating Factors

1. Cable laid direct in Ground

| No of cables/ circuits in groups | Multicore cables in horizontal formation | | | | | Single cables in horizontal formation | | | | |
|-------------------------------------|------------------------------------------|-----------|-----------|-----------|-----------|---------------------------------------|-----------|-----------|-----------|-----------|
| | Touching | S = 15 cm | S = 30 cm | S = 45 cm | S = 60 cm | Touching | S = 15 cm | S = 30 cm | S = 45 cm | S = 60 cm |
| 2 | 0.80 | 0.84 | 0.87 | 0.90 | 0.91 | 0.80 | 0.85 | 0.90 | 0.92 | 0.95 |
| 3 | 0.68 | 0.74 | 0.79 | 0.83 | 0.86 | 0.70 | 0.78 | 0.85 | 0.88 | 0.91 |
| 4 | 0.62 | 0.69 | 0.75 | 0.80 | 0.83 | 0.64 | 0.73 | 0.81 | 0.86 | 0.89 |
| 5 | 0.58 | 0.65 | 0.72 | 0.77 | 0.80 | 0.59 | 0.70 | 0.79 | 0.84 | 0.88 |
| 6 | 0.55 | 0.62 | 0.69 | 0.75 | 0.78 | 0.55 | 0.67 | 0.77 | 0.83 | 0.87 |
| 7 | 0.52 | 0.59 | 0.67 | 0.73 | 0.77 | 0.53 | 0.65 | 0.76 | 0.82 | 0.86 |
| 8 | 0.50 | 0.57 | 0.66 | 0.72 | 0.75 | 0.51 | 0.64 | 0.76 | 0.82 | 0.86 |
| 9 | 0.48 | 0.55 | 0.65 | 0.71 | 0.75 | 0.49 | 0.63 | 0.74 | 0.81 | 0.85 |
| 10 | 0.46 | 0.54 | 0.64 | 0.70 | 0.74 | 0.48 | 0.63 | 0.74 | 0.81 | 0.85 |
| 11 | 0.45 | 0.53 | 0.63 | 0.70 | 0.74 | 0.47 | 0.62 | 0.73 | 0.80 | 0.84 |
| 12 | 0.44 | 0.52 | 0.62 | 0.69 | 0.73 | 0.46 | 0.61 | 0.73 | 0.80 | 0.84 |

S = axial spacing of cable

| No. of cables/ circuits in groups | No. of Tier | Multicore cables in Tier formation | | | | |
|--------------------------------------|-------------|------------------------------------|-----------|-----------|-----------|-----------|

**Above voltage drops (V/km/A) shall be multiplied with rated current & length of Cable in km to calculate total voltage drop in particular length and size of cables.

ELECTRICAL FORMULAS FOR CALCULATING AC LOAD CURRENT

| | | |
|-------------------------------------------|-----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| Load current in Ampere when kVA is given | for Single phase (AC) $\frac{kVA \times 1000}{V}$ | for Three phase (AC) $\frac{kVA \times 1000}{1.732 \times V}$ |
| Load current in Ampere when kW is given | for Single phase (AC) $\frac{kW \times 1000}{V \times pf}$ | for Three phase (AC) $\frac{kW \times 1000}{1.732 \times V \times pf}$ |
| Load current in Ampere when H.P. is given | for Single phase (AC) $\frac{H.P. \times 746}{V \times \%Eff \times pf}$ | for Three phase (AC) $\frac{H.P. \times 746}{1.732 \times V \times \%Eff \times pf}$ |

V = Nominal system voltage in Volts, pf = Power factor, kVA = Kilo Volts Ampere, H.P. = Horse Power

Standard drum lengths of cables

Quality Control

It has been rightly said that "Quality is never an accident, it is always the result of intelligent efforts".

In the manufacture of cables, intelligent efforts are incorporated to achieve quality. For a quality end products, control starts from proper design of the product. All raw materials are selected carefully and only materials of high quality are used in production. Having done this, stage wise inspection is done to ensure conformity with the requirements of relevant Indian Standards where these apply.

Stage - Wise Inspection

- | | |
|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
| i) Wire-Drawing | : Wire diameter Surface Shape Quality of joints in the wire |
| ii) Stranding of Wires: | : Quality of joints in the wires Compaction of conductor Shape of Conductor Dimensions Resistance of Conductor |
| iii) Insulation: | : Dimension over Insulation, Thickness of Insulation, |
| iv) Curing (for XLPE Insulation) | : Hot set test, Tensile strength & elongation test. |
| v) Screening (for H.T. Screened cables) | : Dimension over screen, thick of screen visual examination of surface/defects. |
| v) Laying Up | : Sequence of Cores Direction of lay Diameter over laid up cores Circularity |
| vi) Inner Sheath | : Thickness of Sheath Diameter over Sheath Surface Uniformity Circularity Porosity |
| vii) Armouring | : Diameter of Wires/ Dimensions of Strips Direction of lay Coverage Quality of Joints of Wires |
| viii) Outer Sheath | : Thickness of Sheath Diameter over Sheath Tightness of Sheath Eccentricity Porosity, Embossing |

Test

The tests on cables have been classified broadly in four categories as follows:

Routine Tests:

Tests carried out on each cable to check the requirements which are likely to vary during production.

Type Tests:

Tests carried out to prove conformity with the specification. These are intended to prove the general qualities and design of a given type of cable.

Acceptance Tests:

Tests carried out on samples taken from a lot for the purpose of acceptance of the lot.

Optional Tests:

Special tests to be carried out when required by agreement between the purchaser and the manufacturer.

Special tests required for FRLS Cables can also be carried out at our works i.e. Halogen gas generation test to IEC - 754 Part - I, Smoke generation test to ASTMD 2843, Oxygen index test and Temperature index test to ASTMD - 2863, Flammability test to (1) IEC-332-1, (2) Swedish Chimney test to SS-4241475 Class F3 & (3) IEC-332-3, Flame resistance test to IEEE-383.

Together with the most advanced equipment available, we are able to offer to our valued customers assurances of highest quality and strict adherence to the required specification. As a third party guarantee, our cables have passed rigorous tests at various Government recognized test laboratories such as CPRI, Shri Ram Test House, ERDA Baroda, National Test House, ERTL, RTC.

Routine Tests, Type Tests, Acceptance Tests and Optional Tests as per the Indian Standard Specification for Power and Control Cables with PVC insulation, Cross linked Polyethylene insulation and Special Tests are given in the Annexure.

Tensile Testing Machine

Selection Guide

List of Tests as per IS 1554(Part - I): 1988, IS 1554(Part - II):1988, IS 7098 (Part - I):1988 and IS 7098 (Part-II): 1985

1. Routine Tests:

- a) Conductor Resistance Test
- b) High Voltage Test
- c) Armour Resistance Test for mining Type Cables
- d) Partial Discharge test (for H.T. Screened cable)

2. Type Tests:

- a) Tensile Test (for Aluminium Conductor)
- b) Wrapping Test (for Aluminium Conductor)
- c) Annealing Test (for Copper Conductor)
- d) Conductor Resistance Test
- e) Test for Armour Wires/Strips
- f) Test for thickness of Insulation & Sheath
- g) Physical Test for Insulation & Outer Sheath
- h) Insulation Resistance Test
- i) High Voltage Test
- j) Flammability Test
- k) Hot Set Test - (For XLPE Insulation only)
- l) Partial Discharge test (for H.T. Screened cable)
- m) Bending test (for H.T. Screened cable)
- n) Dielectric Power factor test (for H.T. Screened cable with rated voltage 6.35/11 kV & above)
- o) Heating cycle test (for H.T. Screened cable)
- p) Impulse withstand test (for H.T. Screened cable)

3. Acceptance Tests:

- a) Tensile Test (For Aluminium Conductor)
- b) Wrapping Test (For Aluminium Conductor)
- c) Annealing Test (For Copper Conductor)
- d) Conductor Resistance Test
- e) Test for thickness of Insulation & Sheath
- f) High Voltage Test
- g) Insulation Resistance Test
- h) Tensile Strength & Elongation at break test for Insulation and Sheath
- l) Hot Set Test - (for XLPE Insulation only)
- j) Partial Discharge test (for H.T. Screened cable)

4. Optional Tests:

- a) Cold Bend Test
- b) Cold Impact Test
- c) Armour Resistance Test
(for other than Mining Type Cables)

5. Special Tests (As Applicable):

- a) Oxygen Index Test as per ASTMD - 2863-77
- b) Temp. Index Test as per ASTMD - 2863-77
- c) Smoke Generation Test as per ASTMD - 2843-77
- d) Acid Gas Generation Test as per IEC - 754-1
- e) Flammability Test as per IEC - 332-1, IEEE-383, SS-4241475 Class F3 and IEC - 332-3
- g) Water absorption test (by Electrical Method)
- h) Ultra violet resistance to ASTM-G-53
- i) Die electric Strength retention test
- j) Test for Antirodent & Antitermite property

For selection of a cable, a first hand knowledge of the system in which the cable is to be used, and the installation conditions under which the cable has to operate, is necessary. A knowledge of statutory restrictions and the manufacturing facilities available in the country will help in finding out as to what type of cable will be available for particular usage. The environmental conditions under which the cable has to operate will decide its protective covering. Thus once voltage grade of the cable, number of cores, conductor material, type of insulation and protective coverings are known, size of conductor remains to be decided. The first and foremost criteria for the size of conductor is continuous current rating for the present load. There after the same should be checked for short circuit, voltage drop, over load capacities and future expansions. Once decided the selection of next higher size compared to what is essential for the requirement, will always be worthwhile.

Economic considerations are also necessary.

INFORMATION REQUIRED WITH ENQUIRY & ORDER

The following information should be included in an enquiry:

- i) Voltage Grade.
- ii) Whether cable is to be used on Earthed or Unearthed system (for voltages above 3.3 kV).
- iii) Type of installation whether in air or in ducts or in ground.
- iv) If cables are grouped together, then number of cables in group and vertical and horizontal spacing between them.
- v) Required value and duration of short circuit current.

Following further informations are also required for offering the exact type of cable for any specific purpose:

- a) The normal ambient or operating temperature.
- b) The maximum temperature to which the PVC will be exposed and the duration and frequency of such exposures.
- c) The material with which the PVC will be in contact i.e. oil, gases, acids, alkalies etc. at normal and maximum temperature.
- d) If special flame retardant property is required.
- e) If any special electrical characteristics needed.

Handling & Storage

Handling (Unloading at site): On receipt of cable drums visual inspection of drums should be made ensuring drum packing is original. While unloading the cables certain precautions are to be taken to ensure the safety of the cables.

1. The cable drums should not be dropped or thrown from rail way wagons or trucks during unloading operations as the shock may cause serious damage to cable layers. A crane should be used for unloading cable drums. When lifting drums with the crane, it is recommended that the lagging should be kept in place to prevent the flanges from curshing on to the cable. If the crane is not available, a ramp should be prepared with approximate inclination of 1:3 or 1:4. The cable drum should be rolled over the ramp by means of ropes and winches. Additionally a sand bed at the foot of the ramp may be prepared to brake the rolling the cable drum.
2. Cable should not be dragged along the earth surface.
3. Cable ends should always be sealed by means of suitable end sealing materials to prevent moisturisation of cores and armour.
4. Drums should be rolled in direction of arrow marked on the drum.

Storage:

Cables should be stored in a dry covered place to prevent exposure to climatic conditions and wear and tear of wooden drums and it should preferably on a concrete surface/firm surface which will not cause the drums to sink and thus lead to flange rot and extreme difficulty in moving the drums.

All drums should be stored in such a manner as to leave sufficient space between them for air circulation. It is desirable for drums to stand on battens placed directly under the flanges.

In no case should the drums be stored, "On the Flat", i.e., with flange horizontal.

Laying:

For laying of cables special cares to be taken to prevent sharp bending, kinking, twisting. Cable should be unwound from drum by proper mounting the cable drum on a cable wheel making sure the spindle is strong enough to carry the weight without bending and that it is lying horizontally in the bearings so as to prevent the drum creeping to one side or the other while it is rotating.

Provision should be made to break the drum to avoid further rolling & buckling of cable during sudden stop. A simple wooden plank can serve this purpose

This is incorrect way of pulling the cable & will cause kinks & twist in cable. Shall be avoided at all

However, following salient points are to be considered during laying procedure of cables laid in racks and in built-in trenches.

1. For laying of cables power cables to be placed at the bottom most layer and control cables at top most layer.
2. Single core power cable for use on AC system shall be laid in delta formation supported by non-magnetic material. Trefoil clamps of suitable size are to be placed at regular intervals but preferably not more than 800 mm. Axial spacing of two circuits in delta formation shall not be less than 4 times the cable dia.

In case of multicore power cables, cables shall be laid side by side, with spacings not less than one cable diameter. However derating factors for cables laid on trenches are to be referred.

Multicore power cables and single core DC circuits may be clamped by means of galvanised mild steel saddles but 1.1 kV single core cables should be clamped by means of non-magnetic saddles. The saddles shall not be placed at intervals more than 1500 mm for horizontal and 1200 mm. for vertical runs.

3. Multicore control cables can be laid touching each other on cable racks and wherever required may be taken in two layers. They should be clamped by means of PVC straps both for horizontal and vertical runs (alternatively, fabricated aluminium clamps may be used) at regular intervals.
4. a) If the cables are buried directly in ground IS 1255 is to be followed for code of practice. However, generally cables are laid 1000 mm below finished ground level at any point of cable run and 75 mm of sand cushioning to be provided.
4. b) In loose soil concrete pillar should be provided for as support and hence pipes are recommended to the used for cable path.
5. If there is a possibility of mechanical damage, cables should be protected by means of mild steel covers placed on racks.
6. While laying cables, special care to be taken at bends. Following are the recommended bending radius for power and control cables.

| Voltage Rating kV | PVC and XLPE Cables | |
|-------------------------------------|---------------------|------------|
| | Single Core | Multi Core |
| up to 1.1 Above 1.1 but up to 11 kV | 15 d | 12 d |
| Above 11 kV | 15 d | 15 d |
| | 20 d | 15 d |

Where 'd' is overall diameter of cable.

7. Maximum safe pulling force (when pulled by pulling eye) Aluminium Conductor Cables: 3.0 kg/mm² Copper Conductor Cables: 5.0 kg/mm² Proper method of pulling of cable should be used.

TESTING

INSULATION RESISTANCE MEASUREMENT OF CABLE

The voltage rating of I.R. Tester (Megger) should be chosen as following table:

| Voltage grade of cable | Rating of IR Tester (Megger) of cable | Voltage grade of cable | Rating of IR Tester (Megger) |
|------------------------|---------------------------------------|------------------------|------------------------------|
| 1.1 kV | 500 V | 11 kV | 1000 V |
| 3.3 kV | 1000 V | 22 kV | 2500 V |
| 6.6 kV | 1000 V | 33 kV | 2500 V |

Testing during laying:

All new cables shall be megger-tested before jointing. After jointing is completed all LV Cables shall be megger-tested.

End Terminations & Jointing:

Termination and jointing of Power & Control Cables shall be done by means of compression methods using solderless tinned copper/ Aluminium terminal lugs. For control cables terminations, ring tongue or reducer pin type terminal lug can also be used to suit the purpose.

Overhead/Outdoor Termination

XLPE insulation should be protected from direct solar rays or else ultra violet resistant sleeving / tapping must be provided on exposed XLPE insulation at the Termination to avoid degradation / cracking due to direct exposure of solar rays.

Fire Survival Cables

Introduction

Need of ensuring safe operation of critical circuits is essential in today's installations. Normal cables used in such installations render useless in fire incidences. At Havells, your safety is our concern. Havells has now developed special type "Fire Survival Cables" through research. These cables - also known as CIRCUIT INTEGRITY CABLES & are designed to sustain the high temperatures for a defined minimum period of time under direct fire. These cables are useful to maintain their integrity during the defined period of fire. The construction of these cables is different if compared with ordinary cables. The conductor is manufactured with a specially designed heat barrier and fire resistant insulation which resists the fire to reach conductor surface. The cable continues to remain into operation at high temperatures like 650 °C, 750 °C and 950 °C as per various conditions of operation and applications.

Wires offering same properties are also available.

Specification

These cables are manufactured and tested in accordance with BS 7846, IS 7098(P-1), IEC 69331 and BS 6387 for required temperatures and duration - depending upon the application of cable and site conditions.

Constituents

HAVELLS FS CABLES are manufactured with the following materials.

1. Annealed Plain Copper Conductor
2. Heat Barrier Over the Conductor
3. Cross Linked Polyethylene
4. Galvanised Steel Armour
5. Zero Halogen & Low Smoke Compound

The ZHLS compound ascertains the least smoke and hence increased light transmission during burning of cables. The circuit integrity of HAVELLS FS cables at high temperatures remains unaltered for the required time period as per the specification defined.

Constructions

Solar Cables

Introduction

Solar photovoltaic industry gets more attention as the most promising environment-friendly industry, and it is expected to have the significant role in resolving the earth's energy problem. As production costs diminish, users increasingly view these energy sources as clean, cheap and reliable. In this background, the demand for "SOLAR CABLE", which is the current transmission medium of solar energy power generation, is expected to increase with the expansion of market.

Special Properties of Solar Cables

- Lifetime reliability: lasts up to 30 years even under tough external conditions.
- Outdoor durability: resists extreme temperatures (-40 °C to 120 °C maximum at the core) and ozone resistant.
- UV resistance: full protection against ultraviolet rays.
- Halogen-free: Low Smoke Emission & Low Toxicity/Corrosivity during fire.
- Properties against fire: flame retardant, fire retardant.
- Flexibility and stripability: for fast and easy installation.
- Fully recyclable: in accordance with new environmental regulations.
- Easy installation with color identification (blue, red).
- Suitable to common connector types.
- TÜV certified.

Constituents

Havells solar cables are manufactured with the following materials.

1. Annealed Tinned Copper Conductor
2. Cross Linked Polyolefin Compound
3. Zero Halogen Polyolefin Compound

Construction of solar cable

*can be manufactured with Red/Black colour

Required Features of Solar cable

CHEMICAL FEATURES

- Weather resistant
- Resistant to mineral oils
- Resistant to acids & alkaline

THERMAL FEATURES

- Maximum conductor temperature of operation-120 °C during 20000 hours.
- Minimum operating temperature: - 40 °C

ELECTRICAL FEATURES

- Voltage rating: 1.5 (1.8) kVdc / 0.6/1.0 (1.2) kVac
- High voltage test: 6.5 kVdc for 5 minutes.

MECHANICAL FEATURES

- Resistant to Impact , tear & abrasion
- Minimum bending radius – 4 times of overall diameter.
- Safe pulling force -50 N/SQ. mm

Regional & Branch Offices

NORTH - REGIONAL OFFICE:

Corporate Office: QRG Towers, 2D, Sector-126, Expressway, Noida-201304, Tel: 0120-3331000
