DMX³ ACB's

up to 6300 A

EFFICIENT PROTECTION AND CONTROL FOR ALL TYPE OF BUILDINGS

Electrical panel equipped with DPX³ MCCB's and modular MCB's up to 1600 A

Main electrical panel equipped with DMX³ ACB's and DPX³ MCCB's up to 6300 A

Thanks to DPX³ range of MCCB's and to DX³ MCB's you can benefit of the advantages of a complete protection system at any level of the installation

Optimized performance up to 6300 A

- DMX³ air circuit breakers are available in three frame sizes for three breaking capacities:
50 kA for the DMX³ N designation, 65 kA for DMX³ H and 100 kA for DMX³ L.
- The range covers 11 rated currents, between 630 A and 6300 A.
- All range of DMX³ air circuit breakers is available in fixed and draw-out version.

BREAKING CAPACITIES AND RATED CURRENTS

	630 A	800 A	1000 A	1250 A	1600 A	2000 A	2500 A	3200 A	4000 A	5000 A	6300 A
DMX³-N	50 kA FIXED/DRAW-OUT										-
DMX³-H	65 kA FIXED/DRAW-OUT										-
DMX³-L	100 kA FIXED/DRAW-OUT										

OVERALL DIMENSIONS AND WEIGHT

Fixed version

	4P	465 mm	433 mm	1064 mm	274 kg		

(1) For trip-free switches, please consult us
 Note - Accuracy of dimensions = ± 2mm

OTHER ELECTRICAL FEATURES

Rated operational voltage U_e: 690 VAC 50/60 Hz
 Rated insulation voltage U_i: 1000 VAC 50/60 Hz
 Rated impulse withstand voltage U_{imp}: 12 kV
 Category of use: B

Ambient temperature: -5° C to 70° C
 Humidity: + 55° C with relative humidity of 95%,
 conforms to IEC 68-2-30

LEGRAND ADVANTAGE

The over all dimensions of the breaker contribute considerably to an efficient use of the space inside the electrical panel. The constant depth for all the rated currents facilitates connection of the busbars.

Precise & user friendly LCD protection units

- Besides their easy mounting and connection, strength and good continuity of operation, 2 types of electronic units allow precise adjustment of different limits for current values and time delay. The result is an efficient protection against electrical faults while maintaining total discrimination with downstream breakers.
- The LCD display lets you monitor the measured current values and informs you on fault adjustment and log (the cause of last trip and maintenance operations).

MP4 LSI MICROPROCESSOR BASED PROTECTION UNIT CAT. N° 0288 01

The following settings are adjusted using rotary selector switches:

- Long time delay protection against overloads: I_r from 0.4 to $1 \times I_n$ (6 + 6 steps) on two selectors (0.4-0.9, by steps of 0.1 and 0.0-0.1, by steps of 0.02)
- Long delay protection operation time: t_r - at $6 \times I_r$ (4 + 4 steps) $t_r = 5-10-20-30s$ (MEM ON) 30-20-10-5s (MEM OFF)
- Short time delay protection against short circuits: I_m from 1.5 to $10 \times I_r$ (9 steps) $I_m = 1.5-2-2.5-3-4-5-6-8-10 \times I_r$
- Short time delay protection operation time: t_m from 0 to 0.3s (4 + 4 steps) $t_m = 0-0.1-0.2-0.3s$ ($t = \text{cost}$), 0.3-0.2-0.1-0.01s ($I^2t = \text{cost}$)
- Instantaneous protection against very high short circuits I_i from 2 to $15 \times I_n$ or I_{cw} (9 steps) $I_i = 2-3-4-6-8-10-12-15 \times I_n$ or I_{cw}
- Neutral protection $I_N = I-II-III-IV \times I_r$ (0-50-100-100 %)

MP4 LSIg MICROPROCESSOR BASED PROTECTION UNIT CAT. N° 0288 02

The following settings are adjusted using rotary selector switches:

- Long time delay protection against overloads: I_r from 0.4 to $1 \times I_n$ (6 + 6 steps) on two selectors (0.4-0.9, by steps of 0.1 and 0.0-0.1, by steps of 0.02)
- Long delay protection operation time: t_r - at $6 \times I_r$ (4 + 4 steps) $t_r = 5-10-20-30s$ (MEM ON) 30-20-10-5s (MEM OFF)
- Short time delay protection against short circuits: I_m from 1.5 to $10 \times I_r$ (9 steps) $I_m = 1.5-2-2.5-3-4-5-6-8-10 \times I_r$
- Short time delay protection operation time: t_m from 0 to 0.3s (4 + 4 steps) $t_m = 0-0.1-0.2-0.3s$ ($t = \text{constant}$), 0.3-0.2-0.1-0.01s ($I^2t = \text{constant}$)
- Instantaneous protection against very high short circuits I_i from 2 to $15 \times I_n$ or I_{cw} (9 steps) $I_i = 2-3-4-6-8-10-12-15 \times I_n$ or I_{cw}
- Earth fault current: I_g from 0,2 to $1 \times I_n$ (9 steps)
- Time delay on earth fault tripping: t_g from 0,1 to $1 \times I_n$ (4 steps) both for "t" and " I^2t " constant
- Neutral protection $I_N = I-II-III-IV \times I_r$ (0-50-100-100 %)

INFORMATION

All DMX³ breakers are factory equipped with any MP4/MP6 protection unit LSI or LSIg according to your requirements. You just need to select and indicate the 2 catalogue numbers (1 for the breaker and 1 for the tripping unit).

LEGRAND ADVANTAGE

All protection units are equipped with batteries so you can monitor the parameters even when the breaker is not connected.

Innovative & user friendly touch screen protection units

- MP6 electronic protection units are equipped with a colour touch screen, particularly user friendly, thanks to intuitive icon-based navigation system. The colour display provides a clear presentation of the parameters of the installation.
- Touch screen protection units integrate all the functions of LCD tripping units and have an advanced measurement function which, in addition to monitoring currents, can also be used to display voltages, active and reactive powers, frequency, power factor, harmonics and also energy.
- Alarms can be programmed on a number of these parameters: max. voltage, min. voltage, voltage imbalance, max. and min. frequency, etc.

MP6 LSI TOUCH SCREEN PROTECTION UNIT CAT.NO 0288 03

The following settings are adjusted using the touch screen:

- Long time delay protection against overloads: **Ir**
- Long delay protection operation time: **tr**
- Short time delay protection against short circuits: **Im**
- Short time delay protection operation time: **tm**
- Instantaneous protection against very high short circuits: **Ii**
- Neutral protection: **N**

Tripping curve preview

MP6 LSI TOUCH SCREEN PROTECTION UNIT CAT.NO 0288 04

The following settings are adjusted using the touch screen:

- Long time delay protection against overloads: **Ir**
- Long delay protection operation time: **tr**
- Short time delay protection against short circuits: **Im**
- Short time delay protection operation time: **tm**
- Instantaneous protection against very high short circuits: **Ii**
- Earth fault current: **Ig**
- Time delay on earth fault tripping: **tg**
- Neutral protection: **N**

Earth fault tripping curve preview

LEGRAND ADVANTAGE

The icon-based interface of the management software and the innovative touch screen technology used for MP6 tripping units simplify setting and preparing operations of the DMX³ circuit breaker.

INFORMATION

The MP4 and MP6 electronic protection units can communicate via an RS-485 port. This port is used for remote monitoring and management of the devices in the installation, using the MODBUS protocol. It is therefore possible to control circuit breaker opening and closing, display the electrical parameters and detect all the alarms generated by each device, from a PC.

Innovative & user friendly touch screen protection units (contd.)

- MP6 electronic protection units collect all the useful information in 5 sections, each one easily reachable via the main menu in order to allow an efficient control. Navigation through these sections is very simple thanks to the arrows at the bottom of each page.
- MP6 electronic protection units have an intuitive graphical interface. All useful information and selected settings are easy to understand and visible at a glance. For example current values can be visualized on the starting page thanks to a histogram. Different other settings can be simultaneously displayed on the "settings" screen in order to have a global view.

STARTING MENU

This menu displays the values of I_1 , I_2 , I_3 and I_N as a diagram, the date and the hour, and the alarm icon.

If the breaker opens following an electrical fault a specific icon will appear on the upper part of the screen.

Pressing this icon will open a new window showing the cause of the last event.

Other possible actions:

- Right arrow icon: access the main menu
- Alarm icon: preview the cause of the alarm in course

MAIN MENU

The main menu allows accessing different windows for setting different parameters of the breaker or previewing measured values, battery status, tripping history, etc.

The following accesses are possible:

- 1 Setting according to the tripping curves (current and time)
- 2 Access tripping unit settings (luminosity, contrast and sound volume)
- 3 Access to general information of the breaker
- 4 Back to the previous page
- 5 Access measured values menu
- 6 Access archives
- 7 Preview battery charging status

INFORMATION

• The following events and values are registered into memory and can be accessed via specific menu: cause of the last event, event counter, events history with date and hour, alarms history with date and hour

• MP6 tripping units allow following application: logical selectivity, management of non priority loads, contact management (with Cat.No 0288 12)
 • MP6 tripping units allow following alarms: power reverse, current

imbalance, maximum and minimum voltage values U1N, U2N, U3N, maximum currents I1, I2, I3, voltage imbalance (phase-neutral), inversed phase rotation, maximum and minimum frequency values.

PROTECTIONS SETTING MENU

Vertical arrows allow scrolling between different electrical parameters:

li, lm, tm, lr, tr, lg, tg, etc.

Pressing horizontal icons gives access to corresponding windows allowing value settings. Each value can be increased/decreased, validated or suppressed.

The values need to be saved into memory at the end of the process, for each setting.

MEASURED VALUES MENU

This window allows previewing of measured values for:

- Currents
- Voltages (Ph/N and Ph/Ph)
- Active and reactive powers
- Power factor (total and per phase)
- Active and reactive energy
- Harmonics (for currents and voltages)

Pressing **I, m, M** and **avg** icons at the bottom of the window will display respectively:

instantaneous, minimum, maximum and average value of electrical parameters.

Fast clipping control accessories

- You can remotely control the DMX³ with the help of its accessories: shunt trips, undervoltage releases, motor operators and closing coils.
- All the control accessories are simply clipped on to the front panel of the circuit breaker, which is especially configured in order to facilitate the clipping.
- Every type of accessory is compatible with its own location, in order to avoid any possible mistake.

Undervoltage release

Shunt trip

Closing coil

Motor operators

All control accessories can be easily installed without any special tool and in a very short time. The installation is to be done on the front panel of the air circuit breaker. In that way, the separation between power and control circuits is guaranteed.

SHUNT TRIP

Shunt trips are devices used for the remote instantaneous opening of the air circuit breaker. They are generally controlled through an NO type contact. The actual offer of shunt trips proposes different supply voltages (from 24 V to 415 V), compatibles with AC and DC currents. The shunt trips are already equipped with a special fast connector, to be directly inserted into auxiliary contacts block. An auxiliary contact is connected in series with the coil, cutting off its power supply when the main poles are open.

Technical characteristics:

- Nominal voltage U_n : 24 V \sim ; 48 V \sim ; 110 V \sim ; 220 V \sim ; 415 V \sim
- Tolerance on nominal voltage: 70 to 110% V_n
- Maximum power consumption (max.power for 180 ms): 500 VA \sim /500 W =
- Continuous power: 5 VA \sim /5 W =
- Maximum opening time: 30 ms
- Insulation voltage: 2 500 V 50 Hz for 1min
- Endurance on pulse: surge proof 4 kV 1.2/50 μ s

UNDERVOLTAGE RELEASE

Undervoltage releases are devices which are generally controlled by an NC type contact. The trigger instantaneous opening of the circuit breaker if their supply voltage drops below a certain threshold and in particular if the control contact opens. These releases are equipped with a device for limiting their consumption after the circuit has been closed.

Technical characteristics:

- Nominal voltage U_n : 24 V \sim ; 48 V \sim ; 110 V \sim ; 220 V \sim ; 415 V \sim
- Tolerance on nominal voltage: 85 to 110% V_n
- Maximum power consumption (max.power for 180 ms): 500 VA \sim /500 W =
- Continuous power: 5 VA \sim /5 W =
- Opening time: 60 ms
- Insulation voltage: 2 500 V 50 Hz for 1min
- Endurance on pulse: surge proof 4 kV 1.2/50 μ s

CLOSING COILS

These coils are used for remotely controlling the closing of the power contacts of the circuit breaker. The springs of the circuit breaker are to be loaded prior to the action of the closing coils. They are controlled by an NO type contact.

Technical characteristics:

- Nominal voltage U_n : 24 V \sim ; 48 V \sim ; 110 V \sim ; 220 V \sim ; 415 V \sim
- Tolerance on nominal voltage: 70 to 110% V_n
- Maximum power consumption (max.power for 180 ms): 500 VA \sim /500 W =
- Continuous power: 5 VA \sim /5 W =
- Maximum closing time: 50 ms
- Insulation voltage: 2 500 V 50 Hz for 1min
- Endurance on pulse: surge proof 4 kV 1.2/50 μ s

LEGRAND ADVANTAGE

Electrical connection is made in no time thanks to the fast connector supplied on all above accessories.

NUMBER OF CONTROL AUXILIARIES FOR DMX³ = 3

Shunt trip: 1
Undervoltage release: 1
Closing coils: 1

Easy identification of control accessories

- Electrical auxiliaries are connected on the front panel on terminal blocks provided for this purpose. Accessories are identified on the front panel.
- As the cover has window, it is easy to know which devices are fitted on the device breaker.

MOTOR OPERATORS

Motor operators, are used for remotely reloading the springs of the circuit breaker mechanism immediately after the device closes. The device can thus be re-closed almost immediately after an opening operation.

To motorise a DMX³ it is necessary to add a release coil (undervoltage release or shunt trip) and a closing coil.

If the supply voltage of the controls fails, it is still possible to reload the springs manually. Motor-driven controls have "limit switch" contacts which cut off the power supply of their motor after the springs have been reloaded. Motor operators are easy to mount, with only three screws.

Technical characteristics:

- Nominal voltage U_n :
24 V \sim / \equiv , 48 V \sim / \equiv , 110 V \sim / \equiv ,
230 V \sim / \equiv , 415 V \sim
- Tolerance on nominal voltage:
85 to 110% V_n
- Spring reloading time: 5s
- Maximum power consumption:
140 VA \sim /140 W \equiv
- Starting current: 2 up to 3 I_n 0.1 s
- Maximum cycle: 2/min

SAFETY AND PADLOCKING ACCESSORIES FOR AN INCREASED SECURITY

The DMX³ circuit breakers draw-out types are delivered as standard with safety padlocking shutters preventing access to live terminals. They have a number of other safety devices, such as:

- Key-operated locks:
Main contacts open
Circuit breaker in draw-out position
- Padlocks for:
Main contacts open
Contact shutters closed (for draw-out position)
- Door locking in order to prevent the opening of the electrical switchboard door when the contacts of the ACB are closed.

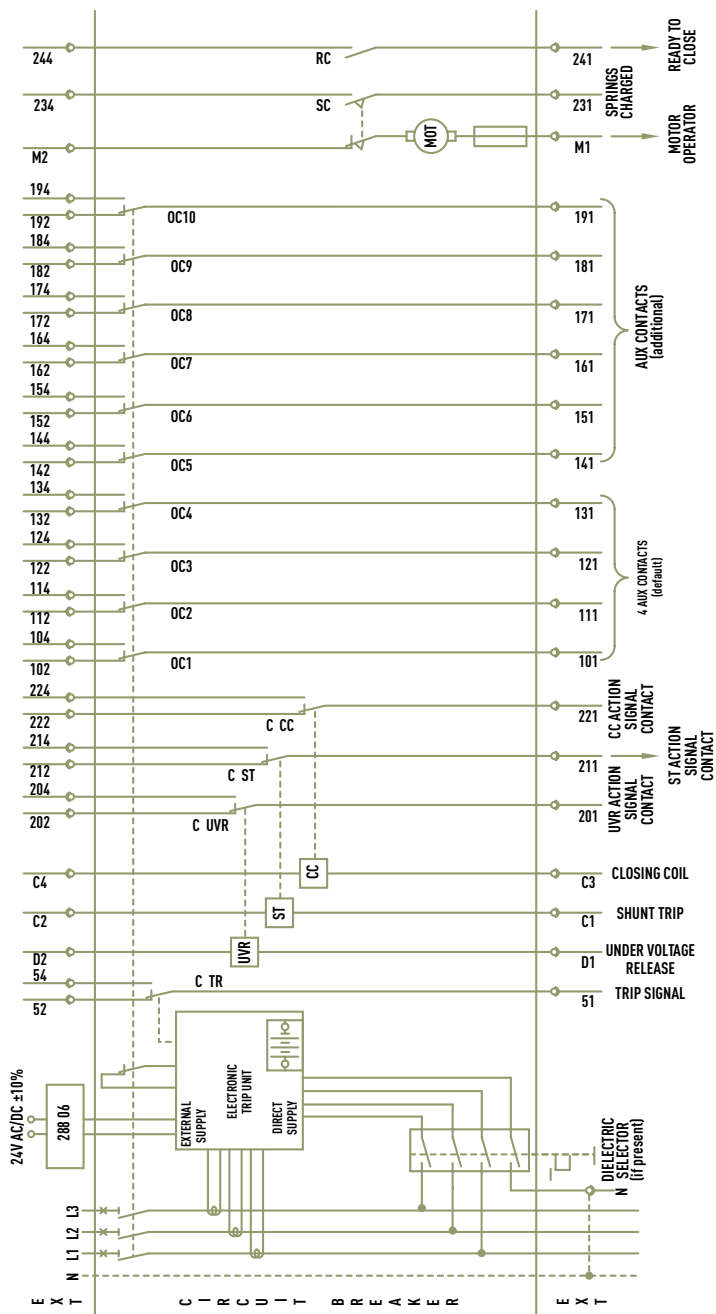

Fixed version equipped with padlocking system

Draw-out version equipped with key-operated locks

SIGNALLING CONTACTS

All DMX³ air circuit breakers are equipped as standard with 4 auxiliary contacts (2 NO and 2 NC type) and one signalling contact for the shunt trip (NO type).

Connection: maximum adaptability

- | The fixed version of DMX³ is equipped with rear terminals for horizontal connection with bars.
- | You can change connection type according to your needs.

FIXED VERSION-CHOOSE YOUR CONNECTION ACCESSORIES: 3 POSSIBILITIES

The type of rear terminals can be easily changed according to your needs.

The breaker is supplied with rear terminals for horizontal connection

REAR TERMINALS FOR FLAT CONNECTION

| The draw-out version is equipped with rear terminals for flat connection with bars.

DRAW-OUT VERSION-CHOOSE YOUR CONNECTION ACCESSORIES

Draw-out version of the DMX³ breakers is supplied with rear terminals for flat connection with bars. You can easily transform those terminals into vertical or horizontal type by using the unique reversible connector.

The breaker is supplied with rear terminals for flat connection

2 TYPES OF FIXING

Reversible connector for vertical or ...

... horizontal connection.

FLAT CONNECTION USING THE REAR TERMINALS OF THE BREAKER

CONNECTIONS: A FEW RECOMMENDATIONS !

Connections provide the electrical connection of equipment and are also responsible for a considerable proportion of their heat dissipation.

Connections must never be under-sized.

Plates or terminals must be used over a maximum area.

Heat dissipation is encouraged by arranging the bars vertically. If an uneven number of bars is connected, place the higher number of bars on the upper part of the terminal.

Avoid bars running side by side: this causes poor heat dissipation and vibrations.

Place spacers between the bars to maintain a distance between them which is at least equivalent to their thickness.

DRAW-OUT VERSION: EXAMPLES OF CONNECTIONS

Draw-out version of the DMX³ breakers is supplied with rear terminals for flat connection with bars.

You can easily transform those terminals into vertical or horizontal type by using the unique reversible connector.

Continuity of service and increased safety

Supply invertors answer the double need of continuity of service and greater safety (security). Traditionally used in hospitals, public buildings, industries with continuous manufacturing processes, airports and military applications, supply invertors become increasingly required for new applications such as telecommunications and computing treatment or in the management of energy sources, notably those say "renewable energies".

Voltage value display

Opening/Closing circuit breakers line Main/Sec

LED circuit breaker status opened (=green) or closed (=red)

LED circuit breaker not inserted (=red)

LED alarm (if red)

LED electronic control box supply (OK if green)

LED electronic control box order: circuit breaker closing (=red) circuit breaker opening (=green)

AUTOMATIC mode

MANUAL mode

LED circuit breaker tripped (=red)

LEGRAND ADVANTAGE

Thanks to its digital displays and different LEDs is possible to watch permanently the state of the inverter, as well as the presence and the value of the voltages on each source.

AUTOMATIC SUPPLY INVERTORS

All DMX³ air circuit breakers (fixed and draw-out version) can be fitted with an interlocking system which guarantees “mechanical safety” in the event of supply inversion. Interlocking is achieved using a cable system and interlocking units mounted on each circuit breaker.

Every circuit breaker composing the supply inverter must be equipped with one interlocking unit.

This system allows devices of different sizes and types (3P, 4P, fixed, draw-out) to be interlocked. DMX³ devices can be installed in different configurations inside the enclosure.

This mechanical interlocking system can be supplemented by motorised operators and an automation control unit making the inverter fully automatic.

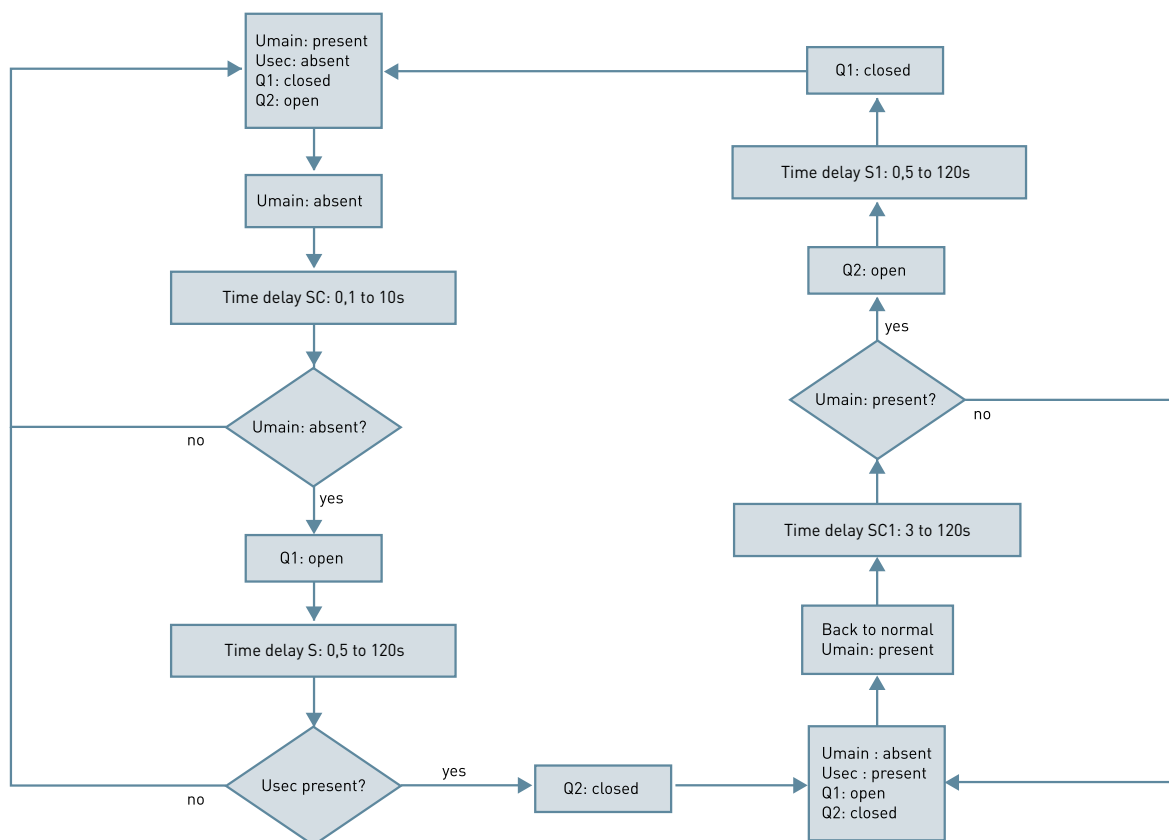

The Legrand automatic control unit allows to easily manage the automatic switching of two sources.

Controlled by a microprocessor, the unit is fully programmable.

All the parameters are adjustable: values of the thresholds of voltage, temporization between switching, starting up of a generator ...

Control panel of a supply inverter with automation control unit Cat. N° 4226 80

Example of algorithm for the functioning of an automatic supply inverter

Flexible configurations

(Examples of supply invertors)

Supply inverter assures the following functions:

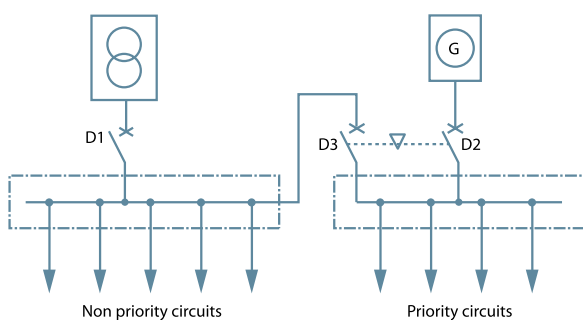

- Switching between a main source and a secondary source in order to supply the circuits requiring continuous service (for safety reasons) or for energy saving purpose (when the secondary source is different from the network).
- Management of the functioning of the secondary source (power generator) supplying the safety circuits.

STAND-BY POWER SUPPLY (WITHOUT LOAD SHEDDING)

The two DMX³ devices (D1 and D2) are connected to a central common busbar. Since they are not simultaneously on-load, they can be in the same enclosure.

STAND-BY POWER SUPPLY (WITH LOAD SHEDDING)

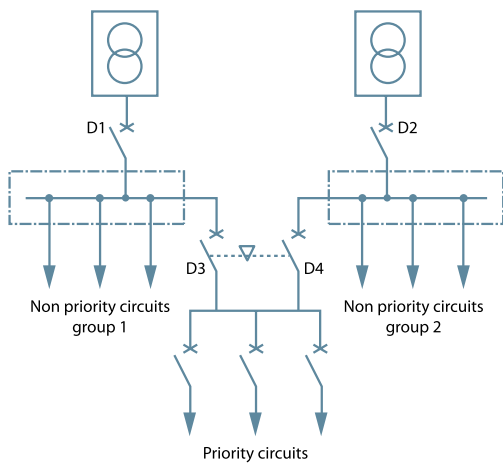

The two DMX³ devices (D1 and D2) are not on-load simultaneously and can therefore be installed in the same enclosure. D3 can be on-load at the same time as D1, and must be installed in another enclosure.

DUAL POWER SUPPLY (TOTAL POWER)

The two DMX³ devices (D1 and D2) draw current on a common busbar. They can only be installed in the same enclosure if the sum of their currents does not exceed the permissible value for the recommended size.

DUAL POWER SUPPLY (REDUCED POWER WITH PRIORITY LOADS)

Flexible configurations

(Examples of supply invertors) (contd.)

- | DMX³ and DMX³-I devices can be fitted with an interlocking mechanism which guarantees “mechanical safety” in the event of supply inversion.
- | Interlocking is achieved using interlocking units mounted on the side of the devices and a cable system.

MECHANICAL INTERLOCK FOR 2 CIRCUIT BREAKERS

D1 is used for the main power supply of the installation (normal functioning), D2 for emergency power supply via power generator (in case of mains fault).
For this configuration the two breakers can be simultaneously open, but can not be closed in the same time.

D1	D2
0	0
1	0
0	1

0 = circuit breaker is open
1 = circuit breaker is closed

MECHANICAL INTERLOCK FOR 3 CIRCUIT BREAKERS

The three DMX³ circuit breakers are connected to one common busbar. D1 and D2 breakers are supplying the energy from two different power transformers and D3 from a power generator (in case of emergency). For this configuration all the three breakers can be simultaneously open. At any time, only one single circuit breaker can be on-load. The following table presents all possible combinations of mechanical interlock of the 3 breakers.

D1	D2	D3
0	0	0
1	0	0
0	1	0
0	0	1

The following example presents three circuit breakers with double mechanical interlock for D2 circuit breaker. D1 and D3 breakers are supplying the electricity from 2 power transformers. There are 6 interlocking combinations possible.

D1	D2	D3
0	0	0
1	0	0
0	0	1
0	1	0
1	1	0
0	1	1
1	0	1

The following example presents three circuit breakers with double mechanical interlock for D2 circuit breaker. It is a possible version of the previous scheme, presenting four combinations. D1 and D3 breakers supply energy for independent circuits. D2 breaker is used in case of emergency for priority circuits.

D1	D2	D3
0	0	0
1	0	0
0	0	1
1	0	1
0	1	0

0 = circuit breaker is open
1 = circuit breaker is closed

INFORMATION

This system allows devices of different sizes and types to be interlocked.
The cable system provides the flexibility to install DMX³ devices in a vertical configuration in the same enclosure or in a horizontal configuration in different columns.

Pack Cat.Nos Locking (Continued)

Pack	Cat.Nos	Description
1	0288 20	Door locking Prevent opening of the door with circuit breaker closed Left-hand and Right-hand side mounting

Pack	Cat.Nos	Description
1	0288 64	Equipment for supply investors The mechanical interlock is set up using cables and can interlock 2 or 3 devices, which may be different type in a vertical or horizontal configuration The interlock unit is mounted on the right-hand side of the device Cable length to be specified according to every configuration
1	0288 65	Interlock for DMX ³ 2500
1	0288 66	Interlock for DMX ³ 4000
1	0288 66	Interlock for DMX ³ 6300

Pack	Cat.Nos	Description
1	0289 20	Cable Interlock Type 1 (2600 mm)
1	0289 21	Type 1 (3000 mm)
1	0289 22	Type 1 (3600 mm)
1	0289 23	Type 1 (4000 mm)
1	0289 24	Type 1 (4600 mm)
1	0289 25	Type 1 (5600 mm)

Pack	Cat.Nos	Description
1	4226 80	Automation control unit For setting the conditions for supply inversion, generator on/off, status acquisition for DMX ³ and DPX ³ circuit-breakers, open / closed Power Supply: 230 V~ and 12-24-48 V= connection by plug-in terminals
1	4226 82	Basic 2 ways control unit
1	4226 83	Advanced 2 ways control unit
1	0261 93	2 Sources / 3 breakers control unit
1	0261 93	Standard Unit
1	0261 94	Communication Unit, enabling data transmission

Pack	Cat.Nos	Description
1	4226 86	Accessories Dual supply module
1	4226 87	Usb connector for PC
1	4226 88	Wifi connector
1	4226 89	RS485 expansion module
1	4226 90	4 Static outputs expansion module
1	4226 91	2 Relay output 5a 250V expansion module
1	4226 92	2 Digital input, 2 relay output expansion module
1	0288 15	Sets of additional signalling contact
1	0288 25	Rating mis-insertion device Prevents the insertion of a draw-out circuit breaker in an incompatible base
1	0288 23	Operations counter Counts total number of operation cycles of the device
1	0288 79	Lifting plate
1	0288 24	Locking device for I/O button
1	0288 22	Door sealing frame

Pack	Cat.Nos	Description
1	0288 05	Communication supervision Option to the supervision of DMX ³

Dimensions p. 37

Pack	Cat.Nos		Description
1	3P	4P	Real terminals For DMX³ 2500 fixed version - frame 1 For flat connection with bars To be fixed on to horizontal rear terminals of the circuit breaker
1	0288 84	0288 85	
1	0288 82	0288 83	For DMX³ 2500 fixed version - frame 2 & 3 For vertical connection with bars those terminal are used in order to transform a flat connection in to a vertical one to be fixed onto Cat.Nos 0288 84/85 according to the number of poles
1	0288 92	0288 93	
1	0288 96	0288 97	For DMX³ fixed version - frame 1 For flat connection with bars To be fixed on to horizontal rear terminals of the circuit breaker
1	0288 96A	0288 97A	For DMX³ draw-out version - frame 1 For vertical or horizontal aluminium connection with bars to be fixed onto plate rear terminal of the circuit breaker
1	0288 94	0288 95	For DMX³ draw-out version - frame 2 & 3 For vertical or horizontal aluminium connection with bars
1	0288 94A	0288 95A	
1	3P	4P	Spreaders for DMX³ 2500 fixed version - frame 1 To be fixed on to horizontal rear terminals of the circuit breaker
1	0288 86	0288 87	
1	0288 88	0288 89	
1	0288 90	0288 91	

Pack	Cat.Nos		Description
1	3P	4P	Equipment for conversion of a fixed device into draw-out device Bases for draw-out device
1	0289 02	0289 03	For DMX ³ /DMX ³ -I 2500 - frame 1

Technical characteristics

Power supply : 187 to 264 V \sim
9 to 65 V \equiv

Frequency : 45 to 65 Hz
Un : 80 to 690 V \sim

Control relay (1 and 4) : 1 NO - 12 A - 250 V \sim
1 NO - 5 A - 250 V \sim
1 NO/NC - 5 A - 250 V \sim

Cable cross section : 0.2 to 2.5 mm²
Dimensions (width x height x depth) : 144 x 144 x 90 mm
Protection : IP 20 at the rear
IP 41 at the front
IP 54 at the front with protective screen

Operating temperature:- -20 °C to + 60 °C

	Operating ranges
Main/Secondary minimum voltage range	70-98 % Un
Main/Secondary voltage absence range	60-85 % Un
Main/Secondary minimum voltage delay	0.1-900 s
Main/Secondary voltage absence delay	0.1-30 s
Generator operating delay	0-900 s
Main/Secondary switching delay	0.1-90 s
Main line presence delay	1-3600 s
Secondary to main switching delay	0.1-90 s
Generator set stopping delay	1-3600 s

Functions

Standard unit Cat.No 0261 93 / 4226 80 / 4226 82

Used to adjust and manage the source inversion operating conditions (DMX³) :

- Remote control (Opening/Closing) of ACBs
- Microprocessor output from unit (Positive Safety)
- Programmable I/O
- Voltage reading : 3 Phase

- phase-neutral
- phase-phase
- Control (on/off) of generator set
- Indication of the state of the ACBs (open/closed/tripped)
- Source inversion blocked in the event of:

- Tripping of 1 or 2 devices
 - If a draw-out ACB is not inserted in its base, as the open/close command of the unit is inoperative
- The use of frontal side dongles (WiFi or USB), to communicate with device without any panel maintenance working (plug & play)

Communicating unit Cat.No 0261 94 / 4226 82 + 4226 89

All the standard functions plus:

- Maximum voltage reading
- Reading of phase rotation direction
- Frequency reading
- Communication: data transmission via the RS 485 port (Modbus protocol)

Dimension and panel board faceplate cut-out

Settings of the microprocessor protection units

- **Neutral protection:** IN = I-II-III-IV x I_r (0-50-100-100 %)

DMX³ 2500/4000/6300

Selective time-current tripping characteristic for MP4 protection units

If short-circuit current is higher than I_{cw} value or I_i is setted at I_{cw} position, tripping time is equal to 30ms

- I_r = long time setting current
- T_r = long time delay
- I_m = short time setting current
- T_m = short time delay
- I_f = instantaneous intervention current

Ground fault tripping curve for MP4 LSIG protection unit

Let through energy characteristics

I_{cc} (kA) = estimated short circuit symmetrical current (RMS value)
 I^2t (A²s) = pass-through specific energy

5000	6 x 100 x 10	6 x 100 x 10
6300	7 x 100 x 10	7 x 100 x 10

Note: The tables presenting the minimum recommended dimensions of connection plates and bars per pole should be used solely as a general guideline for selecting products. Due to extensive variety of switchgear constructions shapes and conditions that can affect the behavior of the apparatus, the solution used must always be verified

XL³ enclosure for safety and flexibility

Protection & distribution up to 6300 A

- Totally type-tested system as per IEC 61439-1 & 2
- Completely bolted system for ease of assembly
- Modular design for numerous configurations
- Short time current withstand capacity upto 110 kA
- Design suitable for Form 4b
- IP 55 degree of protection also available
- Fire resistance of 750 °C for 30 sec
- Compatible with Zucchini busbar trunking system
- Adjustable plinth height for the better spreading of cables
- Permanent earthing for internal components and external faceplates
- Perfectly house the whole range of Legrand ACBs, MCCBs, Capacitors, Contactors, MCBs, Metering devices and OMPs like VSP, MPCB etc.

MCCBs: DRX™

DRX100...the universal solution for residential and commercial

Thermal-magnetic MCCBs

- 1 DRX 100: 3 and 4 poles
- 2 Exclusive system: with a single action, change from the 50 mm standard to the 45 mm DIN standard
- 4
 - Thermal-magnetic protection
 - Nominal currents from 60 to 100 A
 - 10 kA
 - No temperature derating at +50 °C
- 6 2 types of connection: standard and with cage terminals

ADVANTAGES

- Electrical accessories mounted by simply clipping on front panel
- Electrical accessories common to the whole range
- Up to 3 locks (padlock) in open position (off)
- Direct and vari-depth rotary handle
- Certifications: LOVAG (IEC 60947-1-2)

- 1 24 mm distance between base and terminal, for mounting in busbars
- 2 Suitable for all environments (tropicalization, pollution, salt corrosion, etc.)
- 3 Removable plate that clips onto a DIN rail
- 4 Installation in any position
- 5 Standard dimensions
 - 3-pole DRX 100: 75 x 60 x 130 mm
 - 4-pole DRX 100: 100 x 60 x 130 mm
- 6 Hinged front cover

DRX™ 100

thermal-magnetic MCCBs from 60 to 100 A

0270 08

0270 18

0270 08 (Hinged cover)

Dimensions (p. 51)
Technical characteristics and operating curves (p. 52-53)

For switching, control, isolation and protection of low-voltage electrical lines in conformity with standard IEC 60947-2

Fixed thermal and fixed magnetic

Supplied with:

- M8 Terminals
- Fixing screws
- Insulating shields (2 for 3 PI and 3 for 4P)

EXTENSIVE RANGE, HIGH
PERFORMANCE AND SAFETY

A comprehensive range
for all your requirements
from 16 to 1600 A

The DPX³ range features four sizes of moulded case circuit breakers with breaking capacities ranging from 16 to 100 kA.

DPX³ 160
Mounting on rail
or plate

DPX³ 250
Mounting on rail
or plate

DPX³ 630
Mounting on plate

DPX³ 1600
Mounting on plate

Easy identification
of the breaking capacity
by the coloured tab:

- 16 kA
- 25 kA
- 36 kA
- 50 kA
- 70 kA
- 100 kA

EXTENSIVE RANGE, HIGH
PERFORMANCE AND SAFETY

Different versions for
all types
of installation

The DPX³ range includes a wide range of versions to meet all requirements:

- Thermal-magnetic and electronic releases according to the required level of protection
- Fixed, draw-out and plug-in versions according to the required level of maintenance

A WIDE RANGE OF VERSIONS

		DPX ³ 160	DPX ³ 250	DPX ³ 630	DPX ³ 1600

A: adjustable (see catalogue pages for the adjustment ranges)

F: fixed

1: except for DPX³ 160: fixed I_i

Electronic DPX³ units are adjusted using pushbuttons and the settings are shown on the LCD screen

OPTIMISED INTEGRATION

The DPX³ 160 and 250 are the same depth and can therefore be installed on the same row.

NEW FUNCTIONS
TO SIMPLIFY USE

Currents, voltages, frequency, power, energy, THD.

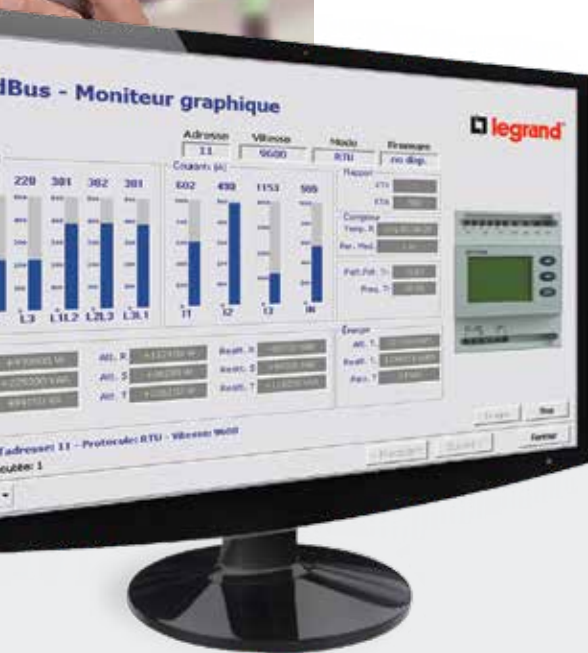

Integrated measurement from 40 to 1600 A

With the new DPX³ electronic circuit breakers with integrated measurement, it is very easy to monitor the parameters of the various circuits in the installation without using any external device.

The measured values are displayed directly on the LCD screen on the front of the devices.

Integrated measurement is available on the DPX³ 250, 630 and 1600.

The measurement data can also be viewed remotely on a PC equipped with supervision software, via a communication interface.

INTERNAL BATTERY
The protection unit has an internal battery, so it can be adjusted even if the circuit breaker is switched off. Tests can be carried out and faults viewed directly via the LCD screen of the MCCBs

NEW FUNCTIONS
TO SIMPLIFY USE

Integrated measurement: choosing a more compact solution

DPX³ units with integrated measurement combine an electronic circuit breaker and a high-performance measurement control unit with LCD display in a single device.

Integrated measurement means:

- Protection of the installation against electrical faults
- Measurement and display of the installation's parameters
- Time-saving as a result of simplified installation and wiring
- Space-saving in the enclosure

CONVENTIONAL SOLUTION

Legrand also has a complete range of meters, measurement control units and for installations equipped with devices without integrated measurement.

Integrated measurement is available on the DMX³, DPX³ and DX³ ranges. The panel board display is an innovative solution, allowing to integrate informations coming from 8 different devices DX³, DPX³, DMX³ or EMDX³.

NEW FUNCTIONS
TO SIMPLIFY USE

Total selectivity
for optimum
continuity of service

Selectivity between Legrand circuit breakers, which ensures continuity of service, is optimised by the improved performance of the DPX³ devices.

In critical configurations, the dynamic and logical selectivity offered by the new electronic DPX³ protection units provide total selectivity in all situations.

LOGICAL SELECTIVITY

This is “smart” selectivity, obtained by means of communication between DPX³ (and/or DMX³) electronic circuit breakers that are connected together via an external wired link. It enables there to be total selectivity between several levels, as well as a reduction of the thermal and electrodynamic stresses on the cables or bars, thus optimising the installation.

.....> Connection cable for logical selectivity

DYNAMIC SELECTIVITY

Electronic DPX³ units have 2-position adjustment:

- Low for normal selectivity level
- High for high selectivity level

When electronic circuit breakers are set to High there is a slight tripping delay, enabling a high level of selectivity to be obtained, even for the highest short-circuit currents.

CURRENT SELECTIVITY AND TIME SELECTIVITY
The precision of the settings on electronic DPX³ units ensures optimum current and time selectivity.

NEW FUNCTIONS
TO SIMPLIFY USE

A range of auxiliaries
and accessories
for an optimum configuration

With the huge range of possibilities offered by the numerous auxiliaries and accessories, DPX³ units can be adapted to fit any installation and any panel configuration.

ELECTRICAL AUXILIARIES

- The same auxiliary or fault signal contacts for the whole range
- Shunt trips or undervoltage releases

ROTARY HANDLES AND MOTOR-DRIVEN HANDLES

- One version for both DPX³ 160 and 250
- Previous DPX versions for DPX³ 630 and 1600

CONNECTION ACCESSORIES

- Cage terminals, extensions, spreaders, rear terminals, etc. to adapt the DPX³ to suit all wiring configurations and simplify panel builder's work

SAFE, QUICK AND EASY
INSTALLATION

Auxiliaries that are easy
to install and wire

For emergency breaking, automatic or remote control and feedback on the status of the device, all DPX³ circuit breakers can be equipped very easily with a comprehensive range of electrical auxiliaries.

NUMBER OF AUXILIARIES THAT CAN BE INSTALLED PER DEVICE

	Auxiliary contacts	Fault signal contacts	Releases
DPX ³ 160	1	1	1
DPX ³ 250	1	1	1
DPX ³ 630	2	2	1
DPX ³ 1600	3	1	1

DPX³ have three options for the outgoing connection wires.

Auxiliaries are installed in dedicated locations under the front panel.

SAFE, QUICK AND EASY
INSTALLATION

The side motor-driven handle is mounted on the rail beside the DPX³.

Motorisation and supply inverters for DPX³ 160/250

Motor-driven handles for DPX³ 160 and 250 are available in two versions, side and front.

They can take a wide range of DC and AC voltages, from 24 to 230 V.

The front motor-driven handle leaves space for access to the connections and for adjustment.

DPX³ 630 and 1600 can be equipped with front motor-driven handles. Supply inverters consist of a plate and an interlocking device, and are factory-assembled.

The interlocking device for DPX³ 160 and 250 greatly simplifies the installation of a supply inverter:

- Extremely easy to install
- Compact
- No adjustment required
- Rail mounting, enabling installation in small cabinets

DPX³ 160 and a DPX³ 250 can be used together for a supply inverter.

With motor-driven handles and the Legrand automation control unit, DPX³ supply inverters can be controlled and managed remotely.

SAFE, QUICK AND EASY
INSTALLATION

Connection accessories
for **all configurations**

Connection plates, cage terminals, spreaders, rear terminals, etc.

The DPX³ range has all the accessories needed for upstream and downstream connection of the circuit breakers via cables or bars in all configurations.

ALL CONNECTION ACCESSORIES

	Cage terminals		Screw terminals for bars	Connection extensions	Adaptors for lugs	Spreaders	Rear terminals
	Standard capacity	Large capacity					
DPX ³ 160	•	•	•			•	•
DPX ³ 250	•	•	•			•	•
DPX ³ 630	•	•		•	•	•	•
DPX ³ 1600	•	•		•		•	•

SPREADERS
These are used for connection via large cross-section cables.

FLAT REAR TERMINALS
These can be turned horizontally or vertically.

TERMINAL SHIELDS
These provide IP 2X protection of the connections.

DPX³ 160 AND 250
The large capacity cage terminals enable connection via large cross-section copper or aluminium cables (see catalogue pages for more detailed information).

SAFE, QUICK AND EASY
INSTALLATION

Plug-in and
draw-out DPX³ for
optimum continuity
of service

The plug-in and draw-out versions enable a faulty device to be replaced in just a few minutes without having to switch off the power supply to the other circuits.

The bases for plug-in and draw-out devices have the same connection options as fixed circuit breakers.

DRAW-OUT DPX³ 630 AND 1600

The “debro-lift” mechanism is very easy to install and fixes onto the support bases. Connection/disconnection is carried out via a mechanism with a handle. The mechanism has three positions, shown by coloured indicators:

  
connected test drawn out

With the optional connector, the power can be disconnected while the auxiliaries remain operational for tests.

With its internal battery, the electronic DPX³ protection unit can be set in the workshop before the circuit breaker is inserted on its base.

Locking via a key or a padlock prevents the device being switched on, while on its base, during maintenance operations.

SAFE, QUICK AND EASY
INSTALLATION

DPX³ 630/1600:
easy maintenance
and upgrades

Retrofitting: to ensure panels are easy to maintain and upgrade, the new DPX³ 630 and 1600 use the same mounting plates as the previous DPX 630 and 1600.

The fixed version DPX³ 160 and 250 with front terminals are mounted on  rails using an adaptor.

SAFE, QUICK AND EASY
INSTALLATION

HX³ 250 and 400 A row distribution
block for DPX³ and modular devices

Distribution systems
that are safe
and reliable

Optimised distribution provides
a complete, coherent system for
distributing electricity in the panel:

- Optimised busbars (C-section zinc-plated copper aluminium)
- Prefabricated links for connecting devices to busbars
- Horizontal distribution blocks with automatic connection of devices (can be connected while power is on)

All these components, which have been tested with Legrand devices, can be used to create safe, easy to maintain panels that comply with standard IEC 61439, reduce installation times and optimise the size of the enclosures.

VX³ C-section busbar
and power supply kit

Prefabricated connection
kits for DPX³

Plug-in HX³ 80/125 A row distribution
block for modular devices

SAFE, QUICK AND EASY
INSTALLATION

The XL³ range: enclosures for all requirements

From the XL³ 400 cabinet to the XL³ 6300 enclosure, the Legrand range fulfils all requirements for quality, strength and attractive appearance.

The XL³ range includes numerous practical innovations for quick, safe assembly, real freedom of configuration and considerable time-saving during maintenance and extension operations.

A comprehensive range for all distribution panels up to 6300 A

Ergonomic or locking handle, and solid or glazed doors.

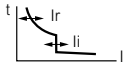

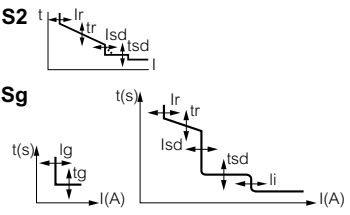

Faster access and work with faceplates on hinges.

1/4 turn faceplates with handle.

Electrical characteristics p. 78-79
Dimensions p. 109

Can be mounted on rail .
MCCBs for switching, control isolation and protection of low voltage electrical lines. Supplied with cage terminals 70 mm² max. (flexible cable) or 95 mm² max. rigid cable with accessories. Can be fitted with accessories and DPX³ common auxiliares. Conform to IEC 60947-2
Ics = 100% Icu

Pack	Cat.Nos	MCCBs with electronic earth leakage module - fixed version
		Thermal adjustable from 0,8 to 1 In Magnetic fixed at 10 In (fixed at 400 A for In 16 A and 25 A) Equipped with earth leakage module with LCD screen Adjustable sensitivity: 0.03 - 0.3 - 1 - 3 A Adjustable tripping: 0 - 0.3 - 1 - 3s (with 0.03 A possible only 0 s)
		Breaking capacity Icu 16 kA (400 V~) In (A)

DPX³ 160 equipment and mounting accessories

4210 40

4210 36

Pack	Cat.Nos	Equipment for plug-in version
		A plug-in version DPX ³ is a fixed version DPX ³ mounted on a plug-in base
		Plug-in bases for DPX³ 160
		Front or rear terminal mounting base
1	4210 40	For DPX ³ 160 - 3P
1	4210 41	For DPX ³ 160 - 4P with or without earth leakage module
		Connectors for auxiliary contacts
1	4210 44	Set of connectors
		Padlocks for plug-in base
1	4210 45	Key barrel and flat key
1	4210 46	Key barrel and star key
1	4210 47	Padlock accessory
		Connection accessories
		High capacity cage terminals
		For Cu/Al cables, 1 x 120 mm ² for flexible cables and 1 x 150 mm ² for rigid cable and 18 mm bars
1	4210 26	Set of 3 terminals
1	4210 27	Set of 4 terminals
		Insulated shields
1	4210 70	Set of 3 insulated shields
		Screw terminals for bars connection
		For copper bars
1	4210 28	Set of 3 terminals
1	4210 29	Set of 4 terminals
		Spreaders
		For incoming bars or cable lugs
1	6250 02	Set of 3 spreaders for DPX ³ 160 3P
1	6250 06	Set of 4 spreaders for DPX ³ 160 4P
		Rear terminals
		Flat swivel terminals Used to convert a fixed version with front terminals to a fixed version with rear terminals
1	4210 36	Set of 3 rear terminals for DPX ³ 160 3P
1	4210 37	Set of 4 rear terminals for DPX ³ 160 4P
		Sealable terminal shields
		For front terminals
1	4210 54	For DPX ³ 160 3P
1	4210 55	For DPX ³ 160 3P
		For rear terminals
1	4210 50	For DPX ³ 160 3P
1	4210 51	For DPX ³ 160 4P
		Fixing plates
		For fixing DPX ³ 160 on rail or on plate
1	4210 71	For DPX ³ 160 3P/4P without earth leakage module
1	4210 73	For DPX ³ 160 4P with earth leakage module
1	4210 68	For DPX ³ 160 3P/4P with side mounting motor operator

Bold catalogue numbers are products normally available with Legrand (India) stockists.

Cat.Nos that are not bold - delivery within 4 - 8 weeks from the date of order.

Bold packing quantity is our mandatory packing. Orders to be placed by Legrand (India) stockists in multiples of the same.

		For rear terminals
1	4210 52	For DPX ³ 250 3P
1	4210 53	For DPX ³ 250 4P

Pack	Cat.Nos	Fixing plates
		For fixing DPX ³ 250 on rail or on plate
1	4210 72	For DPX ³ 250 3P/4P without earth leakage module
1	4210 74	For DPX ³ 250 4P with earth leakage module
1	4210 69	For DPX ³ 250 3P/4P with side mounting motor operator

EKINOXE™

Ekinox™ MCCB DBs for DPX³ MCCBs

- As per IS 8623
- Available in 4, 6, 8 and 12 ways
- Fully insulated busbars and neutral bars
- Reversible doors for IP43 and IP54 distribution boards
- Provision for DPX³ 160 and DPX³ 250 MCCB as incomer and SP/TP MCBs as outgoing

Bold catalogue numbers are products normally available with Legrand (India) stockists.
Cat.Nos that are not bold - delivery within 4 - 8 weeks from the date of order.

Bold packing quantity is our mandatory packing. Orders to be placed by Legrand (India) stockists in multiples of the same.

electronic release

DPX³ 630

S2 electronic release MCCBs from 250 to 630 A

Performance data

S2 - Adjustment of Ir, tr, Isd, tsd

Protection against overloads:

- Ir adjustable from 0.4 to 1 x In
- tr adjustable from 3 to 15 s

Protection against short circuits:

- Isd adjustable from 1.5 to 10 x Ir
- tsd adjustable from 0 to 0.5 s

Sg - Adjustment of Ir, tr, Isd, tsd, Ig, tg

Protection against overloads:

- Ir adjustable from 0.4 to 1 x In
- tr adjustable from 3 to 15 s

Protection against short circuits:

- Isd adjustable from 1.5 to 10 x Ir
- tsd adjustable from 0 to 0.5 s

Protection against earth fault:

- Ig adjustable: from 0.2 to 1 x In and OFF position
- tg adjustable from 0.1 to 1 s

1	4222 29	Set of connectors (24-pin)

Pack	Cat.Nos	Draw-out version
		A DPX ³ draw-out version is a plug-in DPX ³ fitted with a "Debro-lift" mechanism which can be used to withdraw the DPX ³ while keeping it on its base
		"Debro-lift" mechanism
		Supplied with a rigid slide and handle for drawing-out
1	3P 4222 31	For DPX ³ base only
1	4P 4222 32	For DPX ³ base only
1	4222 33	For DPX ³ base with earth leakage module
		Key-lock for "Debro-lift" mechanism
		Enable locking of DPX ³ in drawn-out position
		Flat key
		Star key
1	Flat key 0265 76	One key for DPX ³ only
1	Star key 0265 78	Two keys (one key supplied) for motorised DPX ³ or with rotary handle
		Star key
1	Star key 0263 48	One key for DPX ³ only
1	Star key 0265 77	Two keys (one key supplied) for motorised DPX ³ or with rotary handle
		Accessories for "Debro-lift" mechanism
1	0265 75	Handle for drawing-out
1	0265 74	Signalling contact (plugged-in/drawn-out)
		Fixing plate for signalling contacts
1	4222 36	For fixing the signalling contact Cat.No 0265 74 on a DPX ³ draw-out version
		Blocks of auxiliary contacts
1	4222 30	Block of 6 automatic auxiliary contacts for DPX ³ draw-out version (up to 2 blocks by DPX ³)
		Supply inverter type
		Factory assembled
		A supply inverter type is composed of one plate with interlock for 2 devices
1	0264 09	Plate for MCCB or trip-free switch fixed version
1	0264 04	Plate for MCCB or trip-free switch plug-in and draw-out version

DPX³ 630 and 1600

common auxiliaries

4226 82

Pack	Cat.Nos	Auxiliary contact or fault signal
1	4210 11	For signalling the state of the contacts or opening of the MCCB on a fault For DPX ³ /DPX ³ -I Changeover switch 3 A - 240 V~
		Releases
		Allow remote tripping of a DPX ³
		Shunt releases For DPX ³ and DPX ³ -I Shunt inrush power 300 VA
1	4222 39	Coil voltage 24 V~/=
1	4222 40	Coil voltage 48 V~/=
1	4222 41	Coil voltage 110 V~/=
1	4222 42	Coil voltage 230 V~/=
1	4222 43	Coil voltage 400 V~/=
		Undervoltage releases For DPX ³ and DPX ³ -I Shunt inrush power 300 VA
1	4222 44	Coil voltage 24 V=
1	4222 45	Coil voltage 24 V~
1	4222 46	Coil voltage 48 V~/=
1	4222 47	Coil voltage 110 V~/=
1	4222 48	Coil voltage 230 V~/=
1	4222 49	Coil voltage 400 V~/=
		Time-lag undervoltage releases (800 ms) Allow remote tripping of the MCCB Prevent false tripping in the event of power supply microbreaks. Require a time-lag module connected to the undervoltage release Cat.No 4226 23
1	0261 90	Time-lag module 230 V~ 3 module
1	0261 91	Time-lag module 400 V~ 3 module
1	4226 23	Undervoltage release for DPX ³ 630 and 1600
		Automation control unit Can control supply inversion between two circuit breakers, manage generator start / stop, control single-phase, two-phase and three-phase networks, control phase-phase voltages For DPX ³ and DMX ³ circuit breakers Power supply: 230 V~ or 12/24/48 V=
		Plug-in terminals
1	4226 80	Basic 2 ways control unit
1	4226 82	Advanced 2 ways control unit
1	4226 83	2 Sources / 3 breakers control unit
1	0261 93	Standard Unit
1	0261 94	Communication Unit, enabling data transmission

0261 56

0260 88

0260 98

0260 93 coil for use with relay

Pack	Cat.Nos	Auxiliary power supply for DPX ³
1	4210 83	<p>For supplying DPX³ electronic units when the circuit breaker is open or when the current passing through it is insufficient</p> <p>Input voltage 24 V\sim / \pm 2 modules</p> <p>Output 250 mA: can supply several circuit breakers</p> <p>Consumption:</p> <ul style="list-style-type: none"> - Thermal-magnetic DPX³ with residual current protection: 42 mA - Electronic DPX³: 30 mA - Electronic DPX³ with measurement: 54 mA - Electronic DPX³ with residual current protection: 54 mA - Electronic DPX³ with residual current protection and measurement: 54 mA

Pack	Cat.Nos	RS485 Modbus communication interface DPX ³ electronic interface
1	4210 75	<p>For connecting thermal-magnetic DPX³ with residual current protection and electronic DPX³ to an RS485 Modbus communication network</p> <p>All the information managed by the circuit breaker's electronic card will be shared on the Modbus network</p> <p>Dimension: 2 modules</p> <p>Power supply: 24 V\sim / \pm</p> <p>RS 485 link (2-wire)</p> <p>Address, speed and coding can be modified with configurator kit</p>

Pack	Cat.Nos	Modular power supply
1	0035 67	<p>230 V\sim - 27 V\pm - 0.6 A</p> <p>2 modules</p>

Pack	Cat.Nos	Communication and supervision
		<p>Web servers</p> <p>Enable remote viewing, via a web browser on PCs, smartphones, web viewers, tablet computers such as iPads, Archos, etc., of values collected on electricity meters and multi-function measuring units</p>
1	0261 78	For 32 metering points (meters or multi-function measuring units)
1	0261 79	For an unlimited number of metering points (meters or multi-function measuring units)
		<p>Legrand Software</p> <p>For displaying the values collected from electricity meters or multi-function measuring units on a PC connected to the network</p>
1	0261 88	For 32 metering points (supplied on CD)
1	0261 89	For an unlimited number of metering points (supplied on CD)

Pack	Cat.Nos	Panel board display
1	0261 56	<p>Allows to check information coming from different protection devices: DX³-HP, DPX³, DMX³ or EMDX³</p> <p>Can manage up to 8 devices</p> <p>Power supply: 18-30 V\pm</p> <p>For mounting on door or solid faceplate</p> <p>Door cut: 96 x 96 mm</p>

Residual current relay and coils

Add residual current protection to DPX trip-free switches and DPX MCCBs equipped with release

Pack	Cat.Nos	Residual current relay
		<p>Detects fault currents, and, when used with a shunt trip or an undervoltage release, it gives the trip command to a MCCB or a switch</p> <ul style="list-style-type: none"> • Comprises: <ul style="list-style-type: none"> - a tinged, sealable window - an auxiliary contact - a green Led indicating energisation - 3 yellow Leds indicating respectively the max. phase earth insulation current: 20, 40 and 60 % - a red Led indicating <p>Fixed: exceeding of the insulation fault current value</p> <p>Flashing: breaking of one of the connections between coils and relays</p> <ul style="list-style-type: none"> • For use with coils: <ul style="list-style-type: none"> - Ø35 and 80 mm <p>Adjustable sensitivity: 0.03, 0.05, 0.075, 0.1, 0.15, 0.2, 0.3, 0.5, 0.75, 1, 1.5, 2, 3, 5, 7.5, 10, 15, 20, 30 A</p> <p>Adjustable sensitivity: 0.3, 0.5, 0.75, 1, 1.5, 2, 3, 5, 7.5, 10, 15, 20, 30 A</p> <ul style="list-style-type: none"> - Ø150 mm <p>Adjustable sensitivity: 0.5, 0.75, 1, 1.5, 2, 3, 5, 7.5, 10, 15, 20, 30 A</p> <ul style="list-style-type: none"> - Ø300 mm <p>Adjustable sensitivity: 1, 1.5, 2, 3, 5, 7.5, 10, 15, 20, 30 A</p> <ul style="list-style-type: none"> • Adjustable trip: 0, 0.15, 0.25, 0.5, 1, 2.5, 5 seconds • Supply voltage: 230/240 V - 50/60 Hz <p>Residual current relay to clip on module 2 rail \perp</p>
1	0260 88	

Pack	Cat.Nos	Coils
		<p>For use with residual current relay</p> <p>Cat.No 0260 88</p> <p>1 coil per DPX</p>
1	0260 92	Coil Ø35 mm
1	0260 93	Coil Ø80 mm

1	0260 96	Coil Ø210 mm
1	0260 97	Coil Ø150 mm - open
1	0260 98	Coil Ø300 mm - open

Residual current relay and coils

0261 37

Dimensions p. 57

Add earth leakage protection to DPX³/DPX trip-free switches and DPX³/DPX MCCBs equipped with release

Pack	Cat.Nos	Measurement and control of electric equipment
1/2	0261 35	Central position Front operated Allows you to collect all information of a line Three phase (voltage phase / neutral and phase to phase, phase currents, active and reactive power total active power reactive power factor) Dimensions: 4 DIN modules Power supply: 24 V ~ / = RS 485 (2 wires)
1/3	0261 37	Microprocessor Interface Used to record information of a DPX microprocessor version S2 & Sg (identified currents Phase 1, 2 and 3, records of currents in neutral temperature (microprocessor card), rated current, DPX playback control) Size: 2 DIN modules Power supply: 24 V ~ / = RS 485 (2 wires) Address, speed and coding modified hardening with kit configurator
1/2	0261 36	Interface signaling and control Allows through 24 entries to meet the information of DPX and DPX ³ / DMX ³ (contact Auxiliary Position Open (1 entry) or position open and closed (2 entries), signal failure (1 entry)) and with 6 outputs to drive the circuit breakers (Controlling motor circuit breakers (2 outputs), controlling the triggers of breakers set for test (1 output)) Dimensions: 6 DIN modules Power supply: 24 V ~ / = RS 485 (2 wires) Address, speed and coding modified hardening with kit configurator
1/4	0261 45	Kit Configurator To configure the card input / output and DPX interface (jumper 0-9)
1/20	0466 23	Stabilized power Connects power communication devices 5 A/120 W Dimensions: 4 DIN modules

DPX³-I trip-free switches

160 to 1600 A

4202 99

Dimensions p. 57

Trip-free switches for on-load circuit breaking and isolation of low voltage electrical circuits

Can be associated to earth leakage modules or to corresponding DPX³ residual current relays

Mount on rail up to DPX³ 250 with plate Cat.No 4210 72 (DPX³-I 160) and Cat.No 4210 71 (DPX³ 250)

Conform to IEC 60947-3

Category of use AC 23 A

Connection identical to corresponding DPX³

Δt (s)	-	0 - 0.3 - 1 - 3

1: 400 A for DPX³ 160 I_n 16 A and 25 A

Adjustment for DPX³ electronic release

Setting	DPX ³	DPX ³ with integrated e.l.c.bs
I_r overload trip threshold (long delay)	0.4 to 1 I _n	
t_r long delay trip time	3 - 5 - 10 - 15s	
I_{sd} short-circuit trip threshold (short delay)	1.5 - 2 - 2.5 - 3 - 4 - 5 - 6 - 7 - 8 - 9 - 10 x I _r	
t_{sd} short delay trip time	0.01 - 0.1 - 0.2 - 0.3 - 0.4 - 0.5s	
I_g	(0.2 - 0.3 - 0.4 - 0.5 - 0.6 - 0.7 - 0.8 - 1 - OFF) x I _n	
t_g	0.1 - 0.2 - 0.5 - 1s	

Tripping curve for a DPX³ thermal-magnetic trip

I: actual current
 I_r: thermal protection against overloads (setting: I_r = x I_n)
 I_m: magnetic protection against short-circuits (setting: I_m = x I_n or I_m = x I_r)
 As the abscissa of the curves represents the ratio I/I_r, modifying the setting of I_r will not change the graphical representation of the thermal trip. However, the magnetic setting can be read directly (between 3.5 and 10 in the example).

DPX³ 630/1600

reading DPX³ characteristic curves and adjustment ranges

Tripping curve for a DPX³ electronic release S1, adjustable I_r and I_{sd}

I: actual current
 I_r: long delay protection against overloads (setting: I_r = x I_n)
 I_{sd}: long delay protection operation time (fixed value: 5 s at 6 I_r)
 I_{sd}: short delay protection against short-circuits (setting: I_m = x I_r, between 1.5 and 10 I_r in the example)
 I_{sd}: short delay protection operation time (fixed value: 0.05 s)
 I_f: fixed threshold instantaneous protection (4 to 20 kA depending on model)

Tripping curve for a DPX³ electronic release S2, adjustable I_r, I_{sd}, t_r and t_{sd}

I: actual current
 I_r: long delay protection against overloads (setting: I_r = x I_n)
 t_r: long delay protection operation time (fixed value: 5 to 30 s)
 I_{sd}: short delay protection against short-circuits (setting: I_m = x I_r, between 1.5 and 10 I_r in the example)
 t_{sd}: short delay protection operation time (setting: 0 to 0.3 s)
 I²t constant (adjustable via t_{sd})
 I_f: fixed threshold instantaneous protection (4 to 20 kA depending on model)

Adjustment for thermal-magnetic DPX³

Setting	DPX ³ 630	DPX ³ 1600
I _r overload trip threshold (thermal)	0.8 to 1 I _n	0.8 to 1 I _n
I _m short-circuit trip threshold (magnetic)	5 to 10 I _n	5 to 10 I _n

Adjustment for DPX³ electronic release

Setting	DPX ³ 630 / 1600 S1	DPX ³ 630 / 1600 S2
I _r overload trip threshold (long delay)	(0.4 - 0.5 - 0.6 - 0.7 - 0.8 - 0.9 - 0.95 - 1) x I _n	
t _r long delay trip time	fixed: 5 s (to 6 I _r)	5 - 10 - 20 - 30 s (to 6 I _r)
I _{sd} short-circuit trip threshold (short delay)	(1.5 - 2 - 3 - 4 - 5 - 6 - 8 - 10) x I _r ⁽¹⁾	
t _{sd} Short delay trip time	fixed: 0.05 s	0 - 0.1 - 0.2 - 0.3 s

Automatic transfer switch **DPX³**

Maintaining continuity of supply becomes crucial especially at places where even a small delay in supply could result huge losses. The DPX³ range of MCCBs can be efficiently used as an Automatic Transfer Switch at places that require instant power switching. When connected with the microprocessor control box (line changeover unit) it gives you the flexibility to manage that automatic changeover between two supply lines effectively with remote controls.

DPX³

automatic transfer switch

Technical data

Handling continuity problems efficiently

Maintaining continuity of supply becomes crucial especially at places where even a small delay in supply could result in huge losses. The DPX range of MCCBs can be efficiently used as an Automatic Transfer Switch at places that require instant power switching. When connected with the microprocessor control box (line changeover unit) it gives you the flexibility to manage the automatic changeover between two supply lines effectively with remote controls.

Line changeover systems

Manual line changeover

The standard installation may be carried out by using manually operated DPX circuit breakers in fixed version, combined with mechanical interlocks. The mechanical interlock between DPX circuit breakers consists of a support plate on which two circuit breakers are arranged side-by-side. For particular versions (plug-in or draw-out version between two or more circuit breakers), special interlocks with factory pre-setting are available against order.

Motorised controlled line changeover

The electrically controlled line changeover may be carried out by using interlocked DPX circuit breakers equipped with remote controls.

Automatic line changeover

Automatic line changeover is the most advanced and flexible solution. This system is carried out by combining the components used for the electrically controlled line changeover with the microprocessor control box. This device allows to manage the automatic changeover between two supply sources with simple programming while safety requirements are never compromised.

Microprocessor control box

General characteristics

Microprocessor Control Box allows to manage the automatic changeover between two supply lines with maximum flexibility. The microprocessor device with microprocessor is very compact (144 x 144 mm).

Yet, it is able to perform a large number of functions such as :

- Quick acquisition of voltage levels
- Effective value of line voltage check
- Selection of operating mode (auto/man/test/off)
- Selection of voltage thresholds
- Selection of changeover time
- Display of selected parameters (voltage and time)
- Alarm display
- Starting signal to DG, can be given, in case of primary source failure
- Manual changeover line 1/ line 2
- Lockout of simultaneous switching over between lines
- Diagnostic test

DPX³

automatic transfer switch (continued)

Technical characteristics

- Setting of voltage thresholds on main and secondary line to check between 0.7 and 1Ue (280 - 400 V AC)
- Two models, depending on the supply voltages -230 V AC, 24 V DC
- Changeover time from main line to secondary line 0.5 to 30 s
- Main line resetting time 4 s
- 3-digit data display
- LED - signalling the operating state
- Outgoing relay changeover contacts rating (line circuit breakers control) 16 A 230 V in AC
- Alarm contact rating - 5 A 230 V in AC
- External connections with flexible cable max. 2.5 mm²
- Operating temperature : 0 to 60 °C
- Self-extinguishing polycarbonate casing with sealable transparent shield
- Front degree of protection IP 41 without shield, IP 54 with shield
- Flush-mounting version (144 x 144 mm)

Standard manual changeover switches

General characteristics

The manual changeover switches consist of separate parts that have to be assembled by the user or that may be factory assembled.

The changeover set for DPX³ circuit breakers consists of support plates equipped with a rocking mechanical

interlock on which the circuit breakers in their different versions are fixed.

Standard mechanical interlocks

All fixed version DPX³ circuit breakers with front or rear terminals, except DPX³ 125 circuit breakers, may be equipped with standard mechanical interlock. They may be equipped with remote controls or with rotary handles.

A COMPLETE RANGE OF DEVICES FOR THE PROTECTION AND CONTROL OF MOTORS

CTX³ CONTACTORS AND RTX³ THERMAL RELAYS UP TO 800 A

- Compact size
- High mechanical and electrical endurance for maximum reliability
- 3-pole and 4-pole contactors
- Screw terminals
- Complete range of auxiliaries and accessories

3-POLE CTX³ CONTACTORS

4-POLE CTX³ CONTACTORS

RTX³ thermal relays

MPX³ MOTOR PROTECTION CIRCUIT BREAKERS UP TO 100 A

- High breaking capacity and type 2 coordination for an optimum service level
- Trip class 10
- Sensitive to phase loss
- Compact size
- Can be fixed on 35 mm DIN rail or using screws
- Easy combination with CTX³ 3-pole contactors
- Complete range of control and signalling auxiliaries and accessories

CTX³: CONTROL OF CIRCUITS UP TO 800⁽¹⁾ A

With a comprehensive selection of ratings, control voltages, auxiliaries and accessories, and total complementarity with CTX³ power contactors, RTX³ thermal relays and MPX³ circuit breakers provide an ideal solution for motor switching and controlling circuits for the most demanding applications.

⁽¹⁾ 900 A for 4P contactors

CTX³ 225/400/800: MOUNTING ON PLATE UP TO 800 A

- 1 Connection plates for bars or lugs
- 2 Pre-mounted auxiliary contact blocks (2 per contactor). Additional auxiliary contact blocks can be mounted on the right or left of the contactors.

The 4-pole version of CTX³ contactors is available from 20 to 900 A (AC-1).

CTX³ 22/40/65/100/150: MOUNTING ON DIN RAIL OR ON PLATE UP TO 150 A

- 3 IP 2X terminals: screw terminals up to 40 A, screw or cage terminals from 50 to 100 A
- 4 Integrated auxiliary contacts
- 5 A1 and A2 supply terminal block (top and bottom)

Common time-delay modules and auxiliary contact blocks for all CTX³ up to 150 A.

CTX³ contactors can be fitted with a safety cover.

CTX³ MINI: AN ULTRA-COMPACT SOLUTION UP TO 16 A

With their compact size, CTX³ MINI are easy to integrate in control panels or distribution boards for switching motors, lighting and heating circuits up to 16 A.

CTX³ MINI: MOUNTING ON DIN RAIL OR ON PLATE

- ① IP 2X screw terminals
- ② Integrated auxiliary contact (3P only)
- ③ A1 and A2 supply terminal block

The flexible wire kits allow to associate freely two CTX³ mini 3-pole contactors and make very compact assemblies for motor reversing. For motors up to 7.5 kW 415 V.

AUXILIARIES AND ACCESSORIES FOR EVEN MORE APPLICATIONS

CTX³ mini contactors can take front and side-mounting additional auxiliary contact blocks and a mechanical interlock module.

CTX³ control relays take the same auxiliaries as the CTX³ mini.

Plate and connector for joining a CTX³ mini and an MPX³ 32 motor circuit breaker together directly to create a compact motor starter.

RTX³: THERMAL PROTECTION OF MOTORS

RTX³ thermal relays provide protection against overloads, long starting times and prolonged stalling of the motor. They are very easy to install, connecting directly beneath CTX³ contactors.

- 1 Trip indicator
- 2 Off/test button
- 3 Adjustment of the trip threshold of the thermal protection
- 4 Reset button and mode selector switch: automatic (A)/manual (H)
- 5 Sealable protective cover
- 6 Integrated auxiliary contacts (1 NO + 1 NC)
- 7 IP20 terminals

COMPACT MOTOR STARTERS

Mounting directly beneath contactors or separately (up to 150 A) with the dedicated accessory.

A COMPLETE RANGE

RTX³ thermal relays can be used to create 0.1 A to 800 A motor starters when combined with contactors, from the CTX³ mini to the CTX³ 800.

ACCESSORIES FOR ALL APPLICATIONS

With the wide range of accessories, CTX³ contactors can be used in a wide variety of applications:

- Switching capacitor banks
- Supply inverter
- Reversing contactor
- Time-delay motor starter
- Control unit on machine, etc.

FRONT-MOUNTING BLOCK FOR SWITCHING CAPACITORS

Auxiliary blocks for switching capacitors are installed directly on CTX³ 3-pole, 9 to 100 A contactors. With their discharge resistors, they reduce current peaks during switching of capacitor banks.

Time-delay modules, transient voltage suppression module, motor starter units, etc., a complete range of accessories for all requirements.

MECHANICAL AND ELECTRICAL INTERLOCKING FOR 3 AND 4-POLE CONTACTORS

The mechanical interlock devices, with or without electrical interlocking, can be used to create 9 to 800 A inverters for 3P contactors, and 20 to 900 A inverters for 4P contactors.

The connection kits make it very easy to create 3P reversing contactors up to 100 A.

MPX³: MAXIMUM EFFICIENCY IN A COMPACT UNIT

With just 4 sizes of unit, the MPX³ range of circuit breakers offers uncompromising performance levels and functions for the protection of motors up to 45 kW.

3-pole contactors CTX³

130 A to 800 A industrial contactors

Technical characteristics and coordination with circuit breakers **p. 161-162**
 Dimensions **p. 183-184**

Conform to IEC 60 947-1, IEC 60 947-4-1

Can be equipped with RTX³ thermal relays add-on auxiliary contact blocks, time delay blocks (except CTX³ 225/400/800) and CTX³ interlocking

Thermal relays RTX³

for CTX³ 3-pole industrial contactors

Dimensions **p. 188-189**
 Tripping curves **p. 176-179**

Thermal protection against overloads, long starting times and lasting stalling of the motor
 Differential type ensures a better protection in case of one phase failure thanks to faster tripping
 Conform to IEC 60 947-1, IEC 60 947-4-1

		Side mounting
		2-pole
		Mounting on both sides
20	4168 58	For CTX ³ 3P from 9 A to 150 A (AC-3)
		1 NO + 1 NC - Ith: 16 A
50	4168 59	For CTX ³ 3P from 185 A to 800 A (AC-3) and CTX ³ 4P from 165 A to 900 A (AC-1)
		1 NO + 1 NC - Ith: 16 A
60	4168 49	For CTX ³ 4P from 40 A to 135 A (AC-1)
		1 NO + 1 NC - Ith: 16 A

CTX³ time delay blocks

Pack	Cat.Nos	CTX ³ time delay blocks
		For CTX ³ 3P from 9 A to 150 A (AC-3)
		Time delay: 1 to 30 s
		Front mounting
		On delay
1	4168 70	24-48 V \sim /=
1	4168 71	110-230 V \sim
		Off delay
1	4168 72	24-48 V \sim /=
1	4168 73	110-230 V \sim

CTX³ capacitor switching units

Pack	Cat.Nos	CTX ³ capacitor switching units
		AC-6b
		Operating power from 9.7 kVAR to 62 kVAR (400/440 V)
1	4168 74	For contactors CTX ³ 3P from 9 to 40 A
1	4168 75	For contactors CTX ³ 3P 50 and 65 A with screw terminals
1	4168 76	For contactors CTX ³ 3P 50 and 65 A with cage terminals
1	4168 77	For contactors CTX ³ 3P 75 to 100 A with screw terminals

Pack Cat.Nos CTX³ interlocking

Pack	Cat.Nos	CTX ³ interlocking
		Component parts for assembling by customer
		Horizontal mounting
		Interlock units
50	4168 79	Mechanical interlocks for CTX ³ 4P from 40 to 135 A (AC-1)
1	4168 80	Mechanical interlocks for CTX ³ 3P from 9 to 150 A
12	4168 87	Provides 2 NC contacts for use in electrical interlocking
		Mechanical interlocks for CTX ³ 3P from 185 to 400 A and CTX ³ 4P from 165 to 500 A
1	4168 88	Mechanical interlocks for CTX ³ 3P from 500 to 800 A
1	4168 89	Mechanical interlocks for CTX ³ 4P from 750 to 900 A
		Wire kits
		Used for making reversing between two 3P contactors
4	4168 82	For CTX ³ 22
6	4168 83	For CTX ³ 40
2	4168 84	For CTX ³ 65
1	4168 85	For CTX ³ 100

Boxes for motor starter

Pack	Cat.Nos	Boxes for motor starter
		For CTX ³ 22 equipped with RTX ³ 40 (0.1 - 22 A)
1	4168 90	Without pushbuttons
1	4168 91	With pushbuttons

CTX³ transient voltage suppressor blocks

Pack	Cat.Nos	CTX ³ transient voltage suppressor blocks
		Absorbs the surge arisen out of the coil of the contactor
10	4168 95	24-48 V \sim /=
10	4168 96	100-125 V \sim /=
10	4168 97	200-240 V \sim /=
10	4168 98	380-400 V \sim

CTX³ terminals covers

Pack	Cat.Nos	CTX ³ terminals covers
10	4168 42	For CTX ³ 3P from 185 to 225 A (AC-3)
25	4168 43	For CTX ³ 3P from 265 to 400 A (AC-3)
5	4168 44	For CTX ³ 3P from 500 to 900 A (AC-3)
10	4168 45	For CTX ³ 4P from 165 to 330 A (AC-1)
10	4168 46	For CTX ³ 4P from 420 to 500 A (AC-1)
5	4168 47	For CTX ³ 4P from 750 to 900 A (AC-1)

CTX³ safety front cover

Pack	Cat.Nos	CTX ³ safety front cover
150	4168 40	For CTX ³ 3P from 9 to 150 A (AC-3) and CTX ³ 4P from 40 to 135 A (AC-1)
150	4168 41	For CTX ³ 3P from 85 to 800 A (AC-3) and CTX 4P from 165 to 900 A (AC-1)

Distant reset flexible cables for thermal relays

Pack	Cat.Nos	Distant reset flexible cables for thermal relays

1	4174 23	380-400 V - 50 Hz / 440-460 V - 60 Hz	4	4174 77	Feeder for phase busbar 32 A
		With 2 NO auxiliary contacts			For MPX³ 63H
		Can not attach to MPX ³ 32S			Rated current 108 A
1	4174 30	24 V - 50 Hz / 28 V - 60 Hz	4	4174 72	2 devices
1	4174 31	110 V - 50 Hz / 120 V - 60 Hz	4	4174 74	3 devices
1	4174 32	220-230 V - 50 Hz / 240-260 V - 60 Hz			Enclosures for MPX³ 32H and 32MA
1	4174 33	380-400 V - 50 Hz / 440-460 V - 60 Hz			IP 65 enclosure to use in dusty areas as well as in presence of corrosive gas or liquid
		Dial cover			Yellow/red with rotary handle
		Sealable cover to protect the set value from the operation that is not intended	1	4174 80	With black rotary handle
100	4174 79	For all types of MPX ³	1	4174 81	

DMX³
AIR CIRCUIT BREAKERS

Optimized performance up to 6300 A

DMX³ air circuit breakers are available in three frame sizes for three breaking capacities: 50 kA for the DMX³ N designation, 65 kA for DMX³ H and 100 kA for DMX³ L.

The range covers 11 rated currents, between 630 A and 6300 A.

All range of DMX³ air circuit breakers is available in fixed and draw-out version.

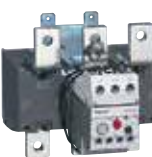

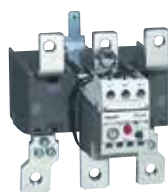

3-pole contactors CTX³ and thermal overload relays RTX³

Definition type 2 coordination according to IEC 947-4-1:

- The contactor or the starter must not endanger persons or systems in the event of a short-circuit.
- The contactor or the starter must be suitable for further use.
- No damage to the overload relay or other parts may occur with the exception of welding of the contactor or starter contacts provided that these can be easily separated without significant deformation (such as with a screwdriver).

Accessory

Interlock unit, Cat.No 4168 80

The mechanical interlock unit provides 2NC contacts for use in electrical interlocking of two contactors

Wire kits

Used for making reversing circuit between two contactors

Contactor	Wire kit		Interlock unit	
	Cat.Nos	Weight	Cat.No	Weight
CTX ³ 22	4168 82	0.04 kg	4168 80	0.06 kg

CTX ³ 65	4168 84	0.12 kg		
CTX ³ 100	4168 85	0.33 kg		
CTX ³ 150	-	-		

CTX³ 9 A - 150 A typical circuit diagram for reversing contactor

Rating of the contacts in the interlocks

Rated operation voltage (V)	600
Rated insulation voltage (V)	600
Rated frequency (Hz)	50/60
Rated thermal current (A)	10
Rated operation current (A) 240 V AC-15	3

Time delay blocks Cat.Nos 4168 70/71/72/73

Applying contactors	Cat.Nos	Rated voltage	Performance
CTX ³ 22 to CTX ³ 150	4168 70	AC/DC 24 to 48 V	<ul style="list-style-type: none"> • Mounting: Head on • Contact: 1 NC • Time delay: 1s to 30s On delay, Off delay
	4168 71	AC 110 to 230 V	
	4168 72	AC/DC 24 to 48 V	<ul style="list-style-type: none"> • Frequency: AC 50/60 hz • Operation: Min. voltage 85% Max. voltage 110% • Accuracy of setting time: ± 20 %
	4168 73	AC 110 to 230 V	

Features of capacitor unit (Pre-loading resistor)

- Damping resistor that can limit the inrush current up to $60 \times I_n$ by closing earlier than the main contacts of the contactor
- No heat loss by the serial resistor
- Eliminates the switching surge
- Improves the performance of the capacitor system

MPCBs MPX³

wiring capacity and accessories

Mounting

MPX³ 32: 35 mm rail (depth 15 mm)
 MPX³ 63: 35 mm rail (depth 15 mm) or screws
 MPX³ 100: 35 mm (depth 15 mm) or 75 mm rail or screws

Caution for thermal adjustments

1. Keep the setting range as shown below
2. Moving counterclockwise out of the setting range may cause the damage of the device

Dial setting method

3. Calibration by ambient air temperature

A: set to one point lower	Calibrated automatically	B: set to one point higher
-20 °C	-5 °C	+40 °C
+60 °C		

In case of using out of the standard air temperature range (-5 °C to +40 °C) it needs to be calibrated by one point

Environment

Ambient air temperature:
 - storage: -50...+ 80 °C
 - operation: -20...+ 60 °C
 Ambient temperature compensation: - 20...+ 60 °C
 Maximum operating altitude: 2000 m
 Protection degree: IP20
 Shock resistance: 25 g
 Vibration resistance: 5~150 Hz

technical characteristics

Selection chart

- The Full Load Current (FLC) indicated for 3-phase motors are of 'squirrel-cage Induction motors' at full load.
- Contactors are of the minimum ratings. Higher rating of contactors can be used.
- Selection chart is for standard 3-phase, squirrel cage motor with average power factor and efficiency.
- Selection is valid only for complete Legrand products.
- Compliance to Type '2' co-ordination is not assured in case these groupings are changed to use another product.
- Normal motor starting time (<=5 Sec) is assumed.

MPX³ 63H / 100H

1) Thermal release trip current :

The adjustable inverse bimetal trip reliability protects motors against overloads. The curve shows the mean operating current at an ambient temperature of 20 °C starting from cold. Careful testing and setting ensures effective motor protection even in the case of single-phasing.

2) Magnetic release trip current :

The instantaneous magnetic trip has a fixed operating current setting. This corresponds to 13 times the maximum value of setting range, at a lower setting it is correspondingly higher.

3) Current setting Ie :

The overload trip corresponds to a thermal overload relay in a motor starter conforming to IEC 947-4-1. If a different value is prescribed (e.g. reduced Ie for cooling medium having a temperature higher than 40 °C or a place of installation higher than 2000m above sea level), the setting current is equal to the reduced rated current Ie of the motor.

THE LEGRAND EDGE

The Legrand group is a global specialist in electrical & digital building infrastructure with a comprehensive range of solutions in four fields : energy distribution, voice data and image distribution , cable management and control & monitoring of installations that cater to the residential, commercial, hospitality and industrial segments.

Legrand (India) has been a leader in the protection business for the last four decades. Legrand combines the latest technology with aesthetics and flexibility to design electrical power distribution systems to guarantee efficient protection and effective service quality.

Today, the ever rising demand of electrical power and therefore the need for identifying ways and means of conserving this energy are the two topics that get debated the most. The effective utilization of the available power and power losses are increasingly becoming a concern for users as well as utilities. Strengthening the brand philosophy of “Listen, Design, Make, Support” further and responding to these requirements of the market, Legrand now offers a range of capacitors with detuned reactors & automatic power factor controllers as a part of reactive energy compensation.

CONTRIBUTE TO ENERGY SAVING AND REDUCE ENVIRONMENTAL IMPACT

The available power in an electrical supply system comprises of active power and reactive power. While active power results in the form of actual work, the reactive power is used to maintain the magnetic field.

The power factor is an indicator of reactive power which is always an inherent part of the electrical system. Lower the power factor higher is the reactive power usage. Hence, the challenge is to improve the power factor and the most cost effective way to improve it is by the use of power capacitors.

Improved power factor helps in reducing I^2R losses,

improves voltage stability and increase utilization of an electrical distribution system. As a result, it further helps customer to save energy and reduce their environmental impact.

With Legrand's range of solutions for reactive energy compensation that include capacitors, detuned reactors, automatic power factor controller and capacitor banks, you will have the power to contribute to energy savings. Be it commercial, or industrial segment, Legrand capacitors increase the service life of installation while improving its power factor.

By installing Legrand Capacitors, now you can

- Improve power quality
- Reduce the active energy losses
- Improve the voltage regulation
- Improve utilization of electrical system
- Eliminate penalties
- In turn, save money, by not paying for the reactive energy that you otherwise would have consumed

Power factor

PHASE SHIFT - ENERGIES - POWERS

> Definition

An AC electrical installation comprising receivers such as transformers, motors, welding machines, power electronics, etc., and in particular any receivers for which the current is out of phase with the voltage, consumes a total energy which is called the apparent energy (E_{app}).

This energy, which is generally expressed in kilovolt-ampere-hours (kVAh), corresponds to the apparent power S (kVA) and can be broken down as follows:

- Active energy (E_a): expressed in kilowatt hours (kWh). This can be used, after being transformed by the receiver, in the form of work or heat. The active power P (kW) corresponds to this energy.
- Reactive energy (E_r): expressed in kilovar hours (kVAh). This is used in particular in the windings of motors and transformers to create the magnetic field without which they would not be able to operate. The reactive power Q (kVAR) corresponds to this energy. Unlike active energy, reactive energy is said to be "unproductive" for the user.

Energies

$$E_{app} = \vec{E}_a + \vec{E}_r$$

$$E_{app} = \sqrt{(E_a)^2 + (E_r)^2}$$

Powers

$$\vec{S} = \vec{P} + \vec{Q}$$

$$S = \sqrt{(P)^2 + (Q)^2}$$

- Three-phase supply:

$$S = \sqrt{3} UI$$

$$P = \sqrt{3} UI \cos \varphi$$

$$Q = \sqrt{3} UI \sin \varphi$$

For a single phase supply the term $\sqrt{3}$ disappears.

- U : Voltage (V)
- I : Current (I)
- φ : Phase angle between current & voltage

POWER FACTOR

By definition, the power factor, or the $\cos \varphi$, of an electrical device is equal to the active power P (kW) over the apparent power S (kVA), and can vary from 0 to 1.

$$\cos \varphi = \frac{P \text{ (kW)}}{S \text{ (kVA)}}$$

It thus enables the reactive energy consumption level of devices to be easily identified.

- A power factor of 1 will result in no reactive energy consumption (resistance)
- A power factor of less than 1 will lead to reactive energy consumption which increases the closer it is to 0 (inductance)

In an electrical installation, the power factor could vary from one workshop to another depending on the equipment installed and the way it is used (off-load, full load operation, etc.).

Energy metering devices record active and reactive energy consumption. Electricity suppliers generally show the term $\text{tg } \varphi$ on their bills.

Calculation of the $\text{tg } \varphi$

$$\text{tg } \varphi = \frac{E_r \text{ (kVAh)}}{E_a \text{ (kWh)}}$$

The $\text{tg } \varphi$ is the ratio between the reactive energy E_r (kVAh) and the active energy E_a (kWh) consumed during the same period.

Unlike the $\cos \varphi$, it is easy to see that the $\text{tg } \varphi$ must be as small as possible in order to have the minimum reactive energy consumption.

$\cos \varphi$ and $\text{tg } \varphi$ are linked by the following equation:

$$\cos \varphi = \frac{1}{\sqrt{1 + (\text{tg } \varphi)^2}}$$

But it is simpler to refer to a conversion table as on page 16.

Power factor (continued)

POWER FACTOR OF THE MAIN RECEIVERS

The following receivers consume the most reactive energy:

- Motors at low load
- Welding machines
- Arc and induction furnaces
- Power rectifiers

RECEIVER	COS φ	TG φ
Ordinary asynchronous motors loaded at	0%	5.80
	25%	1.52
	50%	0.94
	75%	0.75
	100%	0.62
Incandescent lamps	approx. 1	approx. 0
Fluorescent lamps	approx. 0.5	approx. 1.73
Discharge lamps	0.4 to 0.6	approx. 2.29 to 1.33
Resistance furnaces	approx. 1	approx. 0
Compensated induction furnaces	approx. 0.85	approx. 0.62
Dielectric heating furnaces	approx. 0.85	approx. 0.62
Resistance welding machines	0.8 to 0.9	0.75 to 0.48
Single phase static arc welding stations	approx. 0.5	approx. 1.73
Arc welding transformers/rectifiers	0.7 to 0.9	1.02 to 0.48
	0.7 to 0.8	1.02 to 0.75
Arc furnaces	0.8	0.75
Thyristor power rectifiers	0.4 to 0.8	2.25 to 0.75

ADVANTAGES OF A GOOD POWER FACTOR

A good power factor is:

- A high $\cos \varphi$ (close to 1)
- Or a low $\text{tg } \varphi$ (close to 0)

A good power factor makes it possible to optimise an electrical installation and provides the following advantages:

- No billing of reactive energy
- Reduction of the subscribed demand in kVA
- Limitation of active energy losses in the cables given the decrease in the current carried in the installation
- Improvement of the voltage level at the end of the line
- Additional power available at the power transformers if the compensation is performed at the secondary

HOW TO IMPROVE THE POWER FACTOR

By installing capacitors or capacitor banks.

Improving the power factor of an electrical installation consists of giving it the means to "produce" a certain proportion of the reactive energy it consumes itself.

There are various different systems for producing reactive energy, including in particular asynchronous compensators and shunt capacitors (or serial capacitors for large transmission systems).

The capacitor is most frequently used, given it's :

- Non-consumption of active energy
- Purchase cost
- Ease of use
- Service life
- Low maintenance (static device)

Equations

$$Q2 = Q1 - Qc$$

$$Qc = Q1 - Q2$$

$$Qc = P \cdot \text{tg } \varphi 1 - P \cdot \text{tg } \varphi 2$$

$$Qc = P(\text{tg } \varphi 1 - \text{tg } \varphi 2)$$

$\varphi 1$ phase shift without capacitor

$\varphi 2$ phase shift with capacitor

The capacitor is a receiver composed of two conductive parts (electrodes) separated by an insulator.

When this receiver is subjected to a sinusoidal voltage, the current and therefore its power (capacitive reactive) is leading the voltage by 90° .

Conversely, for all other receivers (motors, transformers etc.) the current and therefore its power (reactive inductive) is lagging the voltage by 90° .

The vectorial composition of these currents or reactive powers (inductive and capacitive) gives a resulting current or power below the value, which existed before the capacitors were installed.

In simple terms, it is said that inductive receivers (motors, transformers etc.) consume reactive energy whereas capacitors (capacitive receivers) produce reactive energy.

Power diagram

P: Active power
 S1 and S2: apparent powers
 (before and after compensation)
 Qc: capacitor reactive power
 Q1: reactive power without capacitor
 Q2: reactive power with capacitor

Operation, protection and connection of capacitors

PROTECTION AND CONNECTION OF CAPACITORS

> Operating device

In the case of loads with ultra-fast cycles (welding machines, etc.), the conventional system for operating capacitors (electromechanical contactors) is no longer suitable. High-speed switching compensation systems using solid state contactors are necessary.

The switching current of a capacitor depends on:

- The power of the capacitor
- The short-circuit power of the mains supply to which it is connected
- Whether or not any capacitor banks that have already been activated are present

Given these parameters, it is essential to use quick make and break operating devices (switch, contactor etc.).

When selecting operating devices, the user must be made aware of the choice of equipment available (for operating capacitors).

Contactors are specially designed by contactor manufacturers for operating capacitors and in particular for assembling automatically controlled capacitor banks. These contactors have auxiliary poles combined in series with preload resistors that will limit the inrush current during activation.

> Protection

In addition to the internal protection devices incorporated in the capacitor:

- Self-healing metallised film
- Internal fuses
- Overpressure disconnection devices

it is essential to provide a protection device external to the capacitor.

This protection will be provided by:

- Either a circuit breaker:
 - Thermal relay, setting between 1.3 and 1.5 I_n
 - Magnetic relay, setting between 5 and 10 I_n
- Or GI type HRC fuses, rating 1.4 to 2 I_n

I_n = capacitor nominal current

$$I_n = Q_c / \sqrt{3}U$$

Example: 50 kVAr - 400 V three-phase

$$I_n = 50 / 1.732 \times 0.4 = 72 \text{ A}$$

> Connection (sizing the cables)

Current standards for capacitors are defined so that capacitors can withstand a permanent overcurrent of 30%.

These standards also permit a maximum tolerance of 10% on the nominal capacitance.

Cables must therefore be sized at least for:

$$I_{\text{cable}} = 1.3 \times 1.1 (I_{\text{nominal capacitor}})$$

$$\text{i.e. } I_{\text{cable}} = 1.43 I_n$$

Harmonics

INTRODUCTION

In recent years, the modernisation of industrial processes and the sophistication of electrical machines and equipment have led to major developments in power electronics:

Semi-conductor-based systems (transistors, thyristors etc.) designed for:

- Static power converters: AC/DC
- Rectifiers
- Inverters
- Frequency converters
- And many other multicycle or phase controlled devices.

These systems represent "non-linear" loads for electrical supplies. A "non-linear" load is a load for which the current consumption does not reflect the supply voltage (although the voltage of the source imposed on the load is sinusoidal, the current consumption is not sinusoidal).

Other "non-linear" loads are also present in electrical installations, in particular:

- Variable impedance loads, using electric arcs: arc furnaces, welding units, fluorescent tubes, discharge lamps etc.
- Loads using strong magnetising currents: saturated transformers, inductors etc.

The FOURIER decomposition (harmonic analysis) of the current consumption of a non-linear receiver shows:

- The fundamental, a sinusoidal term at the 50 Hz mains supply frequency
- The harmonics, sinusoidal terms whose frequencies are multiples of the fundamental frequency

According to the equation:

$$I_{\text{rms}} = \sqrt{I_1^2 + \sum_{h=2}^n I_h^2}$$

Σ : Sum of all the harmonic currents from harmonic 2 (50 Hz x 2) to the last harmonic n (50 Hz x n)

These harmonic currents circulate in the source. The harmonic impedances of the source then give rise to harmonic voltages, according to the equation:

$$U_h = Z_h \times I_h$$

The harmonic currents give rise to most of the harmonic voltages causing the overall harmonic distortion of the supply voltage.

$$V_{\text{rms}} = \sqrt{U_1^2 + \sum_{h=2}^n U_h^2}$$

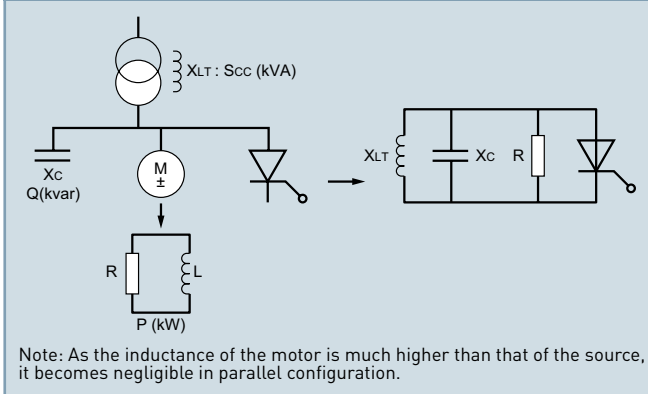

Note: The harmonic distortion of the voltage generated by construction defects in the windings of the alternators and transformers is generally negligible

- U_h : Harmonic voltage
- I_h : Harmonic current
- Z_h : Harmonic impedances

Harmonics (continued)

EFFECT OF HARMONICS ON CAPACITORS

Schematic diagram Equivalent diagram

- Ssc (kVA) : Source short-circuit power
- Q (kVar) : Capacitor bank power
- P (kW) : Non-interfering load power
- XLT : Transformer reactance
- XC : Capacitor reactance

> Reduction of the reactance of the capacitors

- The capacitor reactance $X_C = \frac{1}{C} = \frac{1}{C \cdot 2 \cdot \pi \cdot f}$ is inversely proportional to the frequency, its ability to cancel out harmonic currents decreases significantly when the frequency increases.

- C : Capacitor
- XL : Inductive reactance

- The higher the source short-circuit power (Ssc), the further the resonance frequency is from dangerous harmonic frequencies.
- The higher the power (P) of the non-polluting loads, the lower the harmonic current amplification factor.

> Main harmonic currents

The main harmonic currents present in electrical installations come from semi-conductor based systems. The theoretical rates of such systems are as follows:

- Harmonic 5 (250 Hz) - I5 - 20% I1*
- Harmonic 7 (350 Hz) - I7 - 14% I1*
- Harmonic 11 (550 Hz) - I11 - 9% I1*
- Harmonic 13 (650 Hz) - I13 - 8% I1*

(* I1: Semi-conductor system current at 50 Hz)

> Parallel resonance or anti-resonance between capacitors and source

- The reactance of the source X_{LT} is proportional to the frequency
- The reactance of the capacitors X_C is inversely proportional to the frequency

At frequency Fr.p., there is parallel resonance or anti-resonance (as the two reactances are equal but opposite) and amplification (F.A.) of the harmonic currents in the capacitors and in the source (transformers) where:

$$Fr.p. = F_{supply} \sqrt{\frac{S_{sc}}{Q}} \quad F.A. = \sqrt{\frac{S_{sc} \cdot Q}{P}}$$

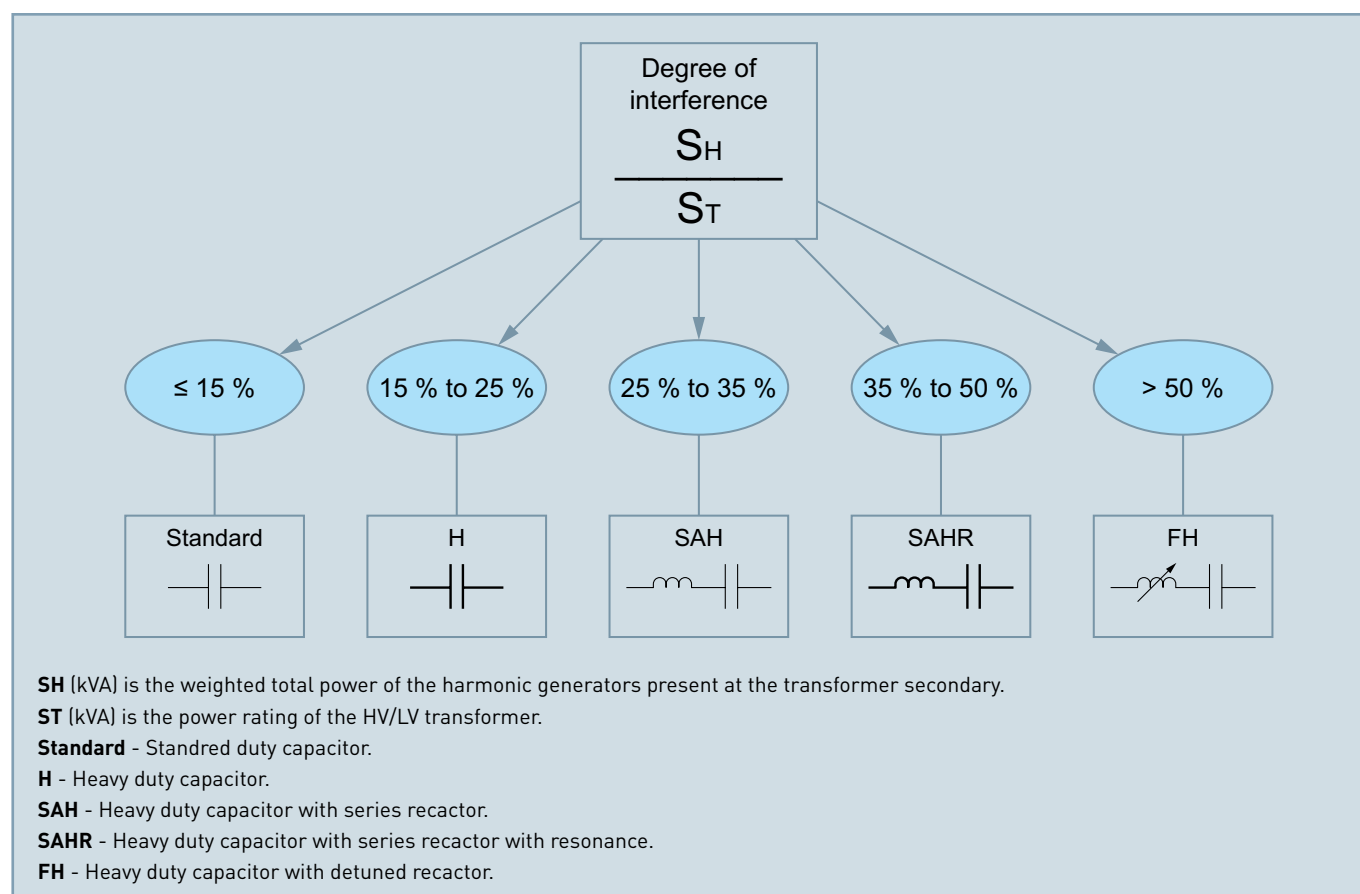

PROTECTING CAPACITORS FROM HARMONICS

By design and in accordance with current standards, capacitors are capable of continuously withstanding an rms current equal to **1.3 times the nominal current** defined at the nominal voltage and frequency values.

This overcurrent coefficient has been determined to take account of the combined effects of the presence of harmonics and overvoltages (the capacitance variation parameter being negligible).

It can be seen that depending on the degree of harmonic pollution S_H (power of the harmonic generators), this coefficient is generally insufficient and that the parameter S_{sc} (short-circuit power), directly related to the power of the source S_T , is preponderant in the value of the parallel resonance frequency ($F_{r.p}$).

By combining these two parameters, S_H and S_T , three types of mains supply can be defined, with a corresponding "type" of capacitor to be installed:

Harmonics (continued)

PROTECTING CAPACITORS USING DETUNED REACTORS

For supplies with a high level of harmonic pollution, installing a detuned reactor, tuned in series with the capacitor, is the only effective protection.

The detuned reactor performs a dual role:

- Increasing the impedance of the capacitor in relation to the harmonic currents
- Shifting the parallel resonance frequency (Fr.p) of the source and the capacitor to below the main frequencies of the harmonic currents that are causing interference

• Fr.p.: Detuned reactor/capacitor/MV/LV transformer parallel resonance frequency

• Fr.s.: Detuned reactor/capacitor serial resonance frequency

- The most commonly used F.r.s values are:

- 50 Hz fundamental: 215 Hz (n=4.3)
190 Hz (n=3.8)
135 Hz (n=2.7)

- 60 Hz fundamental: 258 Hz (n=4.3)
228 Hz (n=3.8)
162 Hz (n=2.7)

- For frequencies below Fr.s., the reactor/capacitor system behaves like a capacitance and compensates the reactive energy.
- For frequencies above Fr.s., the reactor/capacitor system behaves like an inductance which, in parallel with the inductance X_{LT} , prevents any risk of parallel resonance at frequencies above Fr.s. and in particular at the main harmonic frequencies.

Installing capacitor banks

INSTALLATION OPTIONS

In an LV electrical installation, capacitor banks can be installed at 3 different levels:

> Global compensation

Advantages:

- No billing of reactive energy
- This is the most economical solution, as all the power is concentrated at one point and the expansion coefficient makes it possible to optimise the capacitor banks
- Makes less demands on the transformer

Note:

- The losses in the cables (I^2R) are not reduced.

> Sector compensation

Advantages:

- No billing of reactive energy
- Makes less demands on the supply FEEDERS and reduces the heat losses in these FEEDERS (I^2R)
- Incorporates the expansion of each sector
- Makes less demands on the transformer
- Remains economical

Note:

- Solution generally used for very widespread factory supplies

> Individual compensation

Advantages:

- No billing of reactive energy
- From a technical point of view this is the ideal solution, as the reactive energy is produced at the point where it is consumed. Heat losses (I^2R) are therefore reduced in all the lines.
- Makes less demands on the transformer.

Note:

- Most costly solution, given:
 - The high number of installations
 - The fact that the expansion coefficient is not incorporated

Compensation systems

SYSTEMS AND TYPES OF COMPENSATION

When selecting a capacitor bank, there are two compensation systems.

> Fixed type capacitor banks

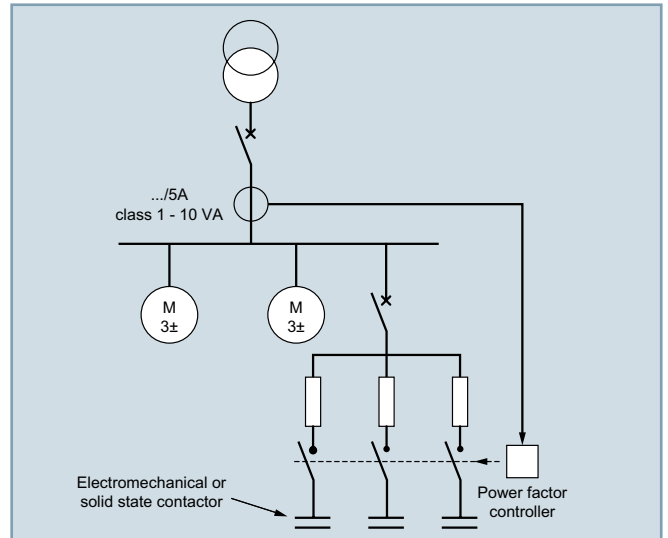

- The reactive power supplied by the capacitor bank is constant irrespective of any variations in the power factor and the load thus the reactive energy consumption of the installation is also constant.
- These capacitor banks are switched on:
 - Either manually by a circuit breaker or switch
 - Or semi-automatically by a remote-controlled contactor
- This type of capacitor bank is generally used in the following situations:
 - Electrical installations with constant load operating 24 hours a day
 - Reactive compensation of transformers
 - Individual compensation of motors
 - Installation of a capacitor bank whose power is less than or equal to 15% of the power of the transformer

Capacitor bank $Q_c \leq 15\% P_{kVA}$ transformer

- P_{kVA} : Power of transformer
- Q_c : Power of capacitor bank

> Automatic type capacitor banks

- The reactive power supplied by the capacitor bank **can be adjusted** according to variations in the power factor and the load of the receivers, thus of the reactive energy consumption of the installation.
- These capacitor banks are made up of a combination of capacitor steps (step = capacitor + contactor) connected in parallel. Switching on and off of all or part of the capacitor bank is controlled by an integrated power factor controller.
- These capacitor banks are also used in the following situations:
 - Variable load electrical installations
 - Compensation of main LV distribution boards or major outgoing lines
 - Installation of a capacitor bank whose power is more than 15% greater than the power of the transformer

Capacitor bank $Q_c > 15\% P_{kVA}$ transformer

How to calculate the power of capacitors

BASED ON ELECTRICITY BILLS

> Calculation

To calculate the capacitor banks to be installed, use the following method:

- Select the month in which the bill is highest (kVArh to be billed)
- Assess the number of hours the installation operates each month
- Calculate the capacitor power Q_c to be installed

$$Q_c = \frac{\text{kVArh to be billed (monthly)}}{\text{No. of hours' operation (monthly)}}$$

> Example

For the subscriber:

- Highest reactive energy bill: December
- Number of kVArh to be billed: 70,000
- Monthly operating times:
high-load + peak times = 350 hours

$$Q_c \text{ (bank to be installed)} = \frac{70,000}{350} = 200 \text{ kVAr}$$

How to calculate the power of capacitors (continued)

CAPACITOR POWER CALCULATION TABLE

> Conversion table

Based on the power of a receiver in kW, this table can be used to calculate the power of the capacitors to change from an initial power factor to a required power factor. It also gives the equivalence between $\cos \varphi$ and $\operatorname{tg} \varphi$.

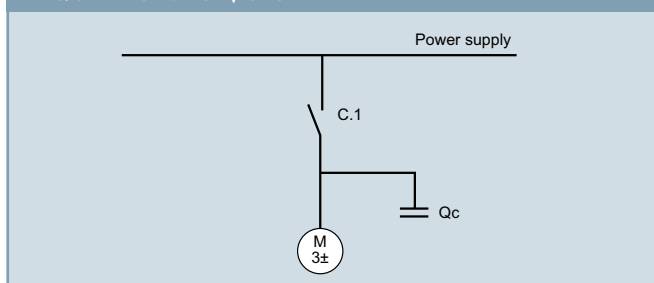

Final power factor		Capacitor power in kVAR to be installed per kW of load to increase the power factor to:										
$\cos \varphi$		0.90	0.91	0.92	0.93	0.94	0.95	0.96	0.97	0.98	0.99	1

Examples: 200 kW motor - $\cos \varphi = 0.75$, required $\cos \varphi = 0.93$, $Q_c = 200 \times 0.487 = 98$ kVAR
 200 kW motor - $\cos \varphi = 0.80$, required $\cos \varphi = 0.95$, $Q_c = 200 \times 0.421 = 84$ kVAR

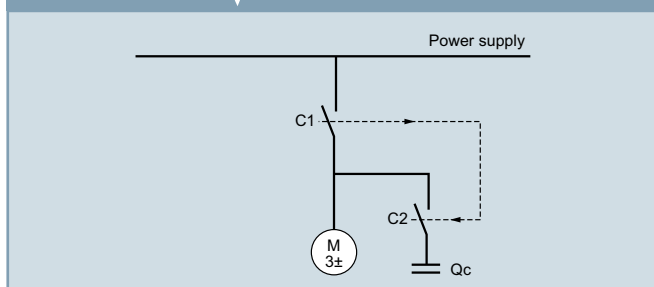

Reactive compensation of asynchronous motors

COMPENSATION AT MOTOR TERMINALS

If $Q_c \leq 90\% I_o \sqrt{3} U$

If $Q_c > 90\% I_o \sqrt{3} U$

I_o : motor off-load current
 U : supply voltage

The table below gives, for information purposes only, the maximum power of the capacitor that can be connected **directly to the terminals of an asynchronous motor with no risk of self-excitation**. It will be necessary to check in all cases that the maximum current of the capacitor does not exceed 90% of the magnetising current (off-load) of the motor.

Maximum power of the motor		Maximum speed rpm		
		3000	1500	1000
HP	kW	Max. power in kVAr		
11	8	2	2	3
15	11	3	4	5
20	15	4	5	6
25	18	5	7	7.5
30	22	6	8	9
40	30	7.5	10	11
50	37	9	11	12.5
60	45	11	13	14
100	75	17	22	25
150	110	24	29	33
180	132	31	36	38
218	160	35	41	44
274	200	43	47	53
340	250	52	57	63
380	280	57	63	70
482	355	67	76	86

If the capacitor power required to compensate the motor is greater than the values given in the above table or if, more generally: $Q_c > 90\% I_o \sqrt{3} U$, compensation at the motor terminals will however remain possible by inserting a contactor (C.2), controlled by an auxiliary contact of the motor contactor (C.1), in series with the capacitor.

The Range

The Legrand range of reactive energy compensations includes:

- Alpivar² & Alpican™ capacitors
- Reactors
- Power factor controllers
- Alpmatic racks
- Alpmatic & Alpistatic automatic capacitor banks

Alpivar²

- Conforms to IEC 60831-1&2
- Self healing metalized polypropylene film
- Double, class II insulation
- Self extinguishing polypropylene resin casing
- Very low loss factor
- Range: 1 to 125 KVAR

Alpican™

- Conforms to IS 13340-1993, IEC 60831-1&2
- ISI marked
- Metalized polypropylene film
- Explosion proof design
- Better heat dissipation
- Low losses
- Range: Resin filled - 1 to 30 KVAR
Gas filled- 5 to 25 KVAR

Reactor

- High harmonics loading capability
- Very low losses
- Low noise
- Long expected life
- High linearity
- Range: 10 to 100 KVAR

Automatic Power Factor Controller

- Conforms to IEC 61010-1
- Intelligent control
- High accuracy
- Range: 3, 5, 7 & 12 steps

Alpimatic racks

- Conforms to IEC 60439-1
- Very low losses
- Long expected life
- Range: 12.5 to 75 KVAR

Alpimatic & Alpistatic automatic capacitor banks

- Conforms to IEC 60439-1&2
- Fully modular design
- IP 31, IK05 Cabinet
- Range: 10 to 900 KVAR

Alpivar² capacitors

The Alpivar² range of capacitors includes:

- Alpivar² capacitors
- Alpimatic racks
- Alpimatic & Alpistatic automatic capacitor banks

MAIN ADVANTAGES OF THE RANGE

> **Alpivar² capacitors** are totally dry units that have been coated under vacuum, with triple electrical protection, for excellent resistance to overvoltages and partial discharges and a much longer service life than conventional units.

> **The universal mounting ranges of Alpivar² automati racks** are factory-wired and can be fitted in any type of cabinet to create automatic reactive energy compensation systems. Reactive power available up to 75 kVAr/step.

> **Alpimatic & Alpistatic automatic capacitor banks** are compact solutions, offering a fully modular design, for easy extension and maintenance and to meet all requirements: standard, H and SAH (standard class, reinforced and extra-reinforced class with detuned reactors). The power factor controller ensures easy commissioning. The Alpistatic range of automatic capacitor banks also provides real-time compensation.

Alpivar² capacitors

Alpivar²: VACUUM TECHNOLOGY CAPACITOR

> Features of the range

Alpivar² patented capacitors are totally dry units with no impregnation, insulation liquid or gas.

They are designed by combining individual single phase windings, connected in a delta configuration, to produce a three-phase unit.

These windings are created using two polypropylene films with zinc coating on one side:

- The metal coating forms the electrode
- The polypropylene film forms the insulation

They are then **vacuum** coated with a self-extinguishing thermosetting polyurethane resin which forms the casing, providing mechanical and electrical protection.

This **vacuum** coating technique for the windings, which is unique to **Legrand**, gives **Alpivar²** capacitors excellent resistance over time and a much longer service life than conventional units.

Vacuum sealing ensures that there is no air or moisture near the windings. This design provides excellent resistance to overvoltages and partial discharges. This unit complies fully with environmental protection requirements (PCB-free).

> Type of capacitor

Monobloc or modular, the **Alpivar²** capacitor meets all user requirements.

The modular solution in particular, with its quick, easy assembly, can be used to create units with different power ratings, resulting in a significant reduction in storage costs for integrators and local distributors.

> Installation

Its compact form makes it easy to install and significantly reduces the costs of cabinets and racks. The casing is particularly resistant to all solvents and atmospheric agents (rain, sun, salty air, etc.).

The **Alpivar²** capacitor is ideal for installations in corrosive atmospheres

Alpivar²: CONNECTION AND PROTECTION DEVICES

> Connection

- The easy accessibility of the terminals on the top of the unit make the **Alpivar²** capacitor very easy to connect.
- The use of a system of "socket" terminals enables direct connection of the unit via cables and lugs.
- The **Alpivar²** double-insulated or class 2 capacitor does not need earthing.

> Electrical protection devices

- **Self-healing dielectric:** This self-healing property is connected with the characteristics of the metal deposit which forms the electrode and the nature of the insulating support (polypropylene film). This special manufacturing technique prevents breakdown of the capacitor due to electrical overvoltages. In fact overvoltages perforate the dielectric and cause discharges which vaporise the metal near the short circuit, thus instantaneously restoring the electrical insulation.

- **Internal fuses:** One per winding.

- **Pressure monitoring devices:** If an electrical fault cannot be overcome by the film self-healing or by means of the electric fuse, gas is emitted, causing a membrane to deform and disconnecting the faulty winding. The triggering of the pressure monitoring devices is visible from outside the capacitor. This feature makes it easy to carry out a quick check on the status of the unit.

These three protection devices, together with the vacuum coating of the windings (technique patented by a group company of LEGRAND), result in a very high-tech unit.

Alpivar² capacitors

The Alpican™ range of capacitors includes:

- > **Resin filled -**
Standard duty & Heavy duty capacitors
- > **Gas filled -**
Heavy duty capacitors

FEATURES

> Explosion proof design

In the event of thermal or electrical overload, the electrical breakdown occurs. During such event the gases released from di-electric film accumulate in the can. This forms a high pressure inside the can. The specially designed can with expansion bead moves upwards. This expansion above certain limit breaks the internal fuse and capacitor is disconnected from the circuit and the flow of current is interrupted. Thus the overpressure dis-connector protects the capacitor from explosion.

Alpican™ capacitors

FEATURES

> Self-healing technology for a longer life

In case of voltage breakdown the metal layer around the breakdown evaporates. This process happens in microseconds. This results in perfect isolation of the faulty area within microseconds. An insulation area is formed which is resistive and voltage proof, keeping the capacitor operational with a negligible loss of capacitance. The capacitor remains operational during the entire process.

> Unique terminal design

Unique terminal design with discharge resistor ensures proper termination of the cables. The cable connection is so firm that it doesn't allow the cable to loosen.

> Compact design

Alpican is constructed with three single elements stacked and assembled to form a delta connection. The compact design offers high mechanical strength and stability. This makes installation sturdy and ensures longer life to the system. Also, the compact shape of the product makes handling easy.

FEATURES

> Ease of installation

Compact cylindrical design of Alpican™ makes installation easy & faster. The reduced installation time and cost makes a perfect combination for the installer. Mounting is done with a stud at the bottom of the capacitor. The stud forms a solid permanent earthing.

> Zero Maintenance

Design and manufacturing process makes Alpican™ maintenance free. This also ensures capacitance stability and long life. It adds value to the product and makes installation error free

> Better heat dissipation

The Aluminium can design make heat dissipation uniform.

> Low energy loss (energy saving)

Alpican is designed and made for long life and low losses during the operation. Thus making it one of the most energy efficient capacitors.

V7540CB

Technical characteristics (p. 287)

Double or class II insulation.
 Totally dry self-extinguishing polyurethane resin casing.
 Internal protection for each winding using:
 - A self-healing metallised polypropylene film
 - An electric fuse
 - A disconnection device in case of overpressure
 Colour: Casing RAL 7035
 Cover RAL 7001
 Conforming to IEC 60831-1 and 2

Bold catalogue numbers are products normally available with Legrand (India) stockists. **Cat.Nos that are not bold** - delivery within 4 - 8 weeks from the date of order. **Bold packing quantity** is our mandatory packing. Orders to be placed by Legrand (India) stockists in multiples of the same. **Red catalogue numbers** : new products.

Alpimatic racks

Alpimatic racks with detuned reactors

P7540

Factory connected units for integration in universal cabinets for automatic compensation systems
Standard and Heavy duty versions:

- 1 Alpivar² capacitor
- 1 contactor suitable for the capacitive currents
- 1 set of 3 HRC fuses
- 1 set of modular copper busbars with junction bars for connecting several racks
- 1 steel frame on which the components are assembled and wired

Pack	Cat.Nos	
		Standard duty, 3 phase, 400 V - 50 Hz

R7.R8040.189

Factory connected units for integration in universal cabinets for automatic compensation systems
Heavy duty capacitor with series reactor versions (detuned reactors):

- 1 Alpivar² capacitor
- 1 contactor suitable for the capacitive currents
- 1 detuned reactor with thermal protection
- 1 set of 3 HRC fuses
- 1 set of modular copper busbars with junction bars for connecting several racks
- 1 steel frame on which the components are assembled and wired

Alpimatic & Alpistatic automatic capacitor banks

M6040

M20040

IP 31 - IK 05 cabinet

Fully modular design for easy extension and maintenance

Alpimatic is made up of one or several cabinets according to the capacitor bank model and the nominal current

The electromechanical contactors are controlled by the Alptec power controller with a simple commissioning procedure

Cable entry at the bottom (at the top on request)

Electrical parts protected against direct contact: IP 20 (door open)

Grey cabinet (RAL 7035) with black base Conforming to standards IEC 60439-1 and 2

Alpivar²

Guarantee

- The Company at its discretion will replace products if they have any manufacturing defect within 1 year for capacitor, Reactor & APFC controller.
- The above guarantee is applicable when the products are selected taken into consideration all the technical characteristics of the product published in our catalogue.
- The guarantee is only applicable when the products are installed as per the Company's instructions and not tampered in any manner.
- The guarantee states the Company's entire liability. It does not extend to cover consequential loss or damage or installation costs arising from defective products.

Alpivar² capacitors

■ Technical specifications

Discharge resistors

Fitted inside, these discharge the unit in accordance with current standards (discharge time, 3 minutes)

Loss factor

Alpivar² capacitors have a loss factor of less than 0.1×10^{-3}
This value leads to a power consumption of less than 0.3 W per kVAr, including the discharge resistors.

Capacitance

Tolerance on the capacitance value: + 5%
Our manufacturing process, which avoids any inclusion of air in the coils, ensures excellent stability of the capacitance throughout the service life of the Alpivar² capacitor.

Maximum permissible voltage: 1.18 Un

Maximum permissible current:

- Standard type: 1.3 In
- H type: 1.5 In

Insulation class

- Withstand at 50 Hz for 1 min: 6 kV
- 1.2/50 μ s impulse withstand: 25 kV

Standards

Alpivar² capacitors comply with:

- French standard: NF C 54 108 and 109
- European standard: EN 60831-1 and 2
- International standard: IEC 60831-1 and 2
- Canadian standard: CSA 22-2 No. 190

Temperature class

Alpivar² capacitors are designed for a standard temperature class -25/+55 °C

- Maximum temperature: 55 °C
- Average over 24 hours: 45 °C
- Annual average: 35 °C

- Peak inrush current : 400 A
- Mean life expectancy : 10 years
- Switching Operations : 10000 per year
- Impregnation : Dry Resin

Alpivar² racks

■ Technical specifications

Loss factor

Standard and Heavy duty type Alpimatic racks have a loss factor of 2 W/kVAr, while that of Heavy duty capacitor with series reactor type racks is 6 W/kVAr

Standards

- International standard: IEC 60439-1
- European standard: EN 60439-2

Temperature class

- Operation: -10 to +45 °C (average over 24 hours: 40 °C)
- Storage: -30 to +60 °C

Alpican™

resin filled capacitors

4151 10

4151 23

*Dimensions (p. 127)
Technical data (p. 125)*

Resin filled 440 V standard duty:

- Conforms to IS 13340-1, IEC 60831-1&2
- ISI marked
- Compact design
- Self healing metallized polypropylene film
- Over pressure device for disconnection
- Low energy losses
- Resistance to high temperatures
- Bio-degradable soft resin, semi-dry

Resin filled 440 V heavy duty:

- Conforms to IS 13340-1, IEC 60831-1&2
- ISI marked
- Compact design
- Self healing metallized polypropylene film
- Over pressure device for disconnection
- Low energy losses
- Resistance to high temperatures
- Bio-degradable soft resin, semi-dry

1/4	4151 38	25 kVAr

reactors and power factor controllers

4151 50

4150 43

*Dimensions (p. 128-129)
Technical data (p. 127)*

Reactor:

- High harmonic loading capacity
- Low losses
- High linearity
- Easy mounting

Automatic power factor controller:

- Conforms to IEC 61010-1
- High accuracy
- IP 41 terminals
- Manual & Automatic mode of operation
- Free potential contact for remote alarm
- Displays alarm indication for 9 different conditions
- Internal temperature sensor
- RS 232 communication port
- In-built LED screens

Pack	Cat.Nos	Reactors 7 % duty
1	4151 48	Reactor 10 kVAr

1	4150 43	12 step controller

Alpican™

Guarantee

- The Company at its discretion will replace products if they have any manufacturing defect within 1 year for capacitor, Reactor & APFC controller.
- The above guarantee is applicable when the products are selected taken into consideration all the technical characteristics of the product published in our catalogue.
- The guarantee is only applicable when the products are installed as per the Company's instructions and not tampered in any manner.
- The guarantee states the Company's entire liability. It does not extend to cover consequential loss or damage or installation costs arising from defective products.

■ Technical specifications

Resin filled standard duty capacitors

- Standards : IS 13340-1993, IS 13341-1992, IEC-60831-1&2
- Rated Voltage : 440 V & 525 V
- Frequency : 50/60 Hz
- Power range : 1 to 30 kVAr
- Losses(Dielectrical) : < 0.20 W/kVAr
- Losses (Total) : < 0.45 W/kVAr
- Peak inrush current : 200*In
- Over voltage : UN+10 % for 8 Hrs in 24 Hrs
- Over current : 1.3 * In
- Mean life expectancy : upto 1,00,000 h at temp level D
- Capacitance tolerance : +10 %
- Voltage test between terminals : 1.75*Un , AC, 2S as per IS
- Voltage test between earth & terminals : 3.6 KV, AC, 2S as per IS
- Discharge resistors : Fitted: standard discharge time less than at residual voltage of 50 V, 60 second as per IS
- Safety : Self healing + pressure sensitive disconnecter + discharge device
- Protection : IP20
- Casing : Aluminium Can
- Dielectric : Metallized Polypropylene film
- Impregnation : NCPB
Soft polyurethane Resin
- Ambient temperature : -10 °C / + 55 °C (Class D)
- Humidity : 95 %
- Altitude : 4000 m above sea level
- Mounting : Indoor,vertical position
- Fixing and earthing : Threaded M12 stud at bottom
- Switching life : Maximum 5000 per year

Resin filled heavy duty capacitors

- Standards : IS 13340-1993, IS 13341-1992, IEC 60831-1/-2, IEC-60831-1&2
- Rated Voltage : 440 V
- Frequency : 50/60 Hz
- Power range : 1 to 30 kVAr
- Losses(Dielectrical) : < 0.20 W/kVAr
- Losses (Total) : < 0.5 W/kVAr
- Peak inrush current : 250*In
- Over voltage : UN+10 % for 8 Hrs in 24 Hrs
- Over current : 1.5 to 1.8 * In
- Mean life expectancy : upto 1,15,000 h at temp level D
- Capacitance tolerance : +10 %
- Voltage test between terminals : 1.75*Un , AC, 2S as per IS
- Voltage test between earth & terminals : 3.6 KV, AC, 2S as per IS
- Discharge resistors : Fitted: standard discharge time less than at residual voltage of 50 V, 60 second as per IS
- Safety : Self healing + pressure sensitive disconnecter + discharge device
- Protection : IP20
- Casing : Aluminium Can
- Dielectric : Metallized Polypropylene film
- Impregnation : NCPB
Soft polyurethane Resin
- Ambient temperature : -10 °C / + 55 °C (Class D)
- Humidity : 95 %
- Altitude : 4000 m above sea level
- Mounting : Indoor,vertical position
- Fixing and earthing : Threaded M12 stud at bottom
- Switching life : Maximum 6000 per year

■ Technical specifications

- Standards : IS 13340-1993, IS 13341-1992, IEC 60831-1/-2, IEC-60831-1&2
- Rated Voltage : 440 V
- Frequency : 50/60 Hz
- Power range : 5 to 25 kVAr
- Losses(Dielectrical) : < 0.20 W/kVAr
- Losses (Total) : < 0.5 W/kVAr
- Peak inrush current : 300*In
- Over voltage : UN+10 % for 8 Hrs in 24 Hrs
- Over current : 1.4 * In
- Mean life expectancy : upto 1,80,000 h at temp level C
- Capacitance tolerance : -5/10 %
- Voltage test between terminals : 1.75*Un , AC, 2S as per IS
- Voltage test between earth & terminals : 3.6 KV, AC, 2S as per IS
- Discharge resistors : Fitted: standard discharge time less than at residual voltage of 50 V, 60 second as per IS
- Safety : Self healing + pressure sensitive disconnecter + discharge device
- Protection : IP20
- Casing : Aluminium Can
- Dielectric : Metallized Polypropylene film
- Impregnation : Inert gas impregnated
- Ambient temperature : - 40 °C / + 55 °C (Class D)
- Humidity : 95 %
- Altitude : 4000 m above sea level
- Mounting : Indoor, vertical position
- Fixing and earthing : Threaded M12 stud at bottom
- Switching life : Maximum 7000 per year

■ Technical specifications

- Standard: IEC 60076-6
- Rated line voltage: 440 V
- Rated frequency: 50 Hz
- De-tuning factor p [%]: 7 %
- Tolerance on inductance: 0/+6 %
- Dielectric test: 50 Hz 3 kV, 60s
- Protection class: IP 00
- Cooling method: natural air (AN)
- Ambient temperature: +40 °C
- Insulation class: H
- Insulation level: 1.1kV
- Blocking factor p% 7 % - Tuning order 3.78
- Temperature protection (NC) : Yes

■ Technical specifications

- Digital power factor controller
- LED screen: 3 digits, 7 segments
- Membrane keypad
- RS 232 serial port for setting parameters and automatic testing via a PC
- Internal temperature sensor
- Advanced function for measuring capacitor overvoltages, average over a week
- 1 programmable relay for an alarm and/or controlling a fan

Versions

- 3, 5, 7 and 12 controlled steps

Temperature class

- Operation: - 10 to + 60 °C
- Storage: - 20 to + 80 °C

Current inputs

- Rated current: 5 A (1 A on request)
- Operating limit: 0.125 A to 6 A
- Input current: 0.65 W
- Not sensitive to the CT polarity
- Not sensitive to the phase rotation polarity

Frequency

- 50 Hz/60 Hz

Parameters

- Power factor: 0.8 inductive to 0.8 capacitive
- Same step reconnection time: 5 to 240 s
- Manual and automatic mode
- 4 quadrant operation for operation on generator
- Internal temperature sensor
- Volt-free contact for remote alarm
- Alarm display (overvoltage, over/under compensation, overload, etc.)

A company always known for its groundbreaking innovations, Legrand's extensive R&D and technologically advanced products make us who we are today. As the global specialist in electrical and digital building infrastructures, our understanding of the market and its needs motivate us to innovate. Your recognition of our efforts, led us to the next step - DX³.

DX³

Presenting, DX³, an international range of protection devices. Its revolutionary design supports all kinds of installations thus giving a never before experience. With 10 patents, 13 new features and a wide range, DX³ is the next step.

LEGRAND, A CLEAR, COMPREHENSIVE OFFER FOR ALL TYPES OF APPLICATION

The new DX³ circuit breakers can be integrated with a wide range of products, providing exceptional technical performance levels

The variety of functions and range of characteristics offered will enable you to equip all your distribution boards. The very high levels of coordination between the various ranges of DX³ modular circuit breakers makes it suitable for all types of application.

PROTECTION / BREAKING

MEASUREMENT

CONTROL

All functions on DIN rail

Each breaking capacity has its own power solution

Perfect complementarity for your distribution boards up to 6300 A and 100 kA breaking capacity.

DX³

DPX³

DMX³

DX³ A COMPLETE SOLUTION

The efficient designs of the products are such that they can be easily installed. The clear identification marks, to know the state of the circuit breaker, make it easier to maintain. The high quality products also assure the safety of the user, thus making it a complete solution.

COPYTRACER, THE FIGHT AGAINST COUNTERFEITING
 Copytracer is a unique registration number that is marked on some of our products. The number is stored in a database. Go to the website: www.legrand-copytracer.com

Sliding shutters

New top clamp for all tools

Technical labelling area

F10A

Integrated label holder

Colour coded handle with ON/OFF colour indication

Environment friendly

Improved air channels

Bottom clamp

EASY, SAFE CONNECTION

Safety is
prioritised with
the innovative
features of the
DX³ products

The quality and hold of the connections are vital for the safety of distribution boards fitted with high breaking capacity MCBs. The connection areas are designed to make installation faster without compromising on safety.

RISING CLAMP TERMINALS
Ensure a high quality, durable connection

RELIABLE CONNECTIONS
Compensation for the effect of loosening to ensure excellent hold over time and consistent contact ($I_n \geq 80 \text{ A}$)

Temperature rise
-20%

1.5
modules/pole

Black handle: circuit breakers
Grey handle: switches

Breaking capacity

- 16 kA
- 25 kA
- 36 kA
- 50 kA

RETRACTABLE INSULATING SHIELDS

With the integrated retractable insulating shields, no additional accessories are needed to isolate the connections on any breaking capacities and high ratings of the 1.5 modules/pole ($I_n \leq 63 \text{ A}$) circuit breakers.

DX³ IMPECCABLE QUALITY

Legrand pays particular attention to how these devices perform: Each of them is set and checked individually on the production lines

The design integrated with the DX³ range implicates its international quality. The products are crafted in a way to provide ease of installation.

PERFECT CONTROL OF YOUR INSTALLATION

The DX³ range
has a selection
of electrical
auxiliaries
for monitoring
and controlling
circuits remotely

Auxiliary contacts and fault
signal contacts, shunt trips,
undervoltage releases,
overvoltage releases and
motorised controls.

THE AUXILIARIES FIT FIRMLY
without the need for any tools and
ensures that the entire assembly is robust

THE ACCESSIBILITY OF THE TERMINALS
and the visibility of the screw heads
make the installer's work easier

Marking of auxiliaries
(characteristics,
connection, mounting)

The fault signal
contacts have a
test button

The colour code of the indicators
on the signalling auxiliaries is
the same as that
of the remote indicators

DX³ circuit breakers take up
to 3 auxiliaries including one
control auxiliary

DX³ motorised controls can be used with 1 module per
pole devices (circuit breakers, RCBOs and RCCBs)
just as easily as auxiliaries.

OPTIMISED SPACE IN THE DISTRIBUTION BOARD

Legrand motorised controls are the most compact
in the market: 1 module wide.
They save a great deal of space inside the
distribution board.

PROTECTION TAILORED TO YOUR REQUIREMENTS

A compact solution for
protection and measurement

The new DX³ RCD add-on modules with metering have a wide range of features to meet the most stringent safety requirements. They come with RS485 communication port for remote data viewer.

CHOOSE YOUR DISTRIBUTION

Legrand optimised distribution has been designed for maximum safety, ease of installation and maintenance of distribution boards

Wiring and tedious tightening operations are minimised, and the risks of poor contact and short-circuits are reduced, while mounting time is optimised.

DISTRIBUTION BLOCK SUPPLY VIA THE POWER SUPPLY MODULE PROVIDED

CONNECTION MODULES
Set of 4 connection modules (L1, L2, L3, N) for 1 module/pole devices

OPTIMISED DISTRIBUTION HX³ 125 A horizontal distribution blocks with plug-in connection

Horizontal 4-pole distribution for XL³ 160 to 4000 enclosures:

- Optimised design: Freedom to mix 1P, 1P+N, 2P, 3P and 4P devices on the same row
- Optimised installation: Automatic connection with no wiring or clamping
- Safe connection and disconnection of devices, even when the distribution block is powered-up (due to the IP xxB insulation of the distribution block and the integral connection modules in the devices).

DISTRIBUTION BLOCK SUPPLY VIA THE MAIN DEVICE

EASY CONNECTION

Circuit breakers with plug-in terminals are fixed onto the distribution block with no need for any tool. The phase to be connected is determined by the choice of the connector. The distribution block can be supplied via the power supply module provided or via the head of row device.

MORE COMFORT WITH ENERGY SAVINGS

The Legrand modular
control and monitoring
devices are a

perfect addition to
the range of DX³
protection devices

With its time switches & contactors, Legrand guarantees a unique experience. With the selection of functions available, it is simple to improve the safety, efficiency and comfort of installations and meet energy requirements.

- Conform to IEC/EN 61095
- Space for power supply busbar on top (up to 25 A)
- Manual override for test and repair functions, carried out via the handle
- Permanent "ON" or "OFF" without automatic reset

- With synchronous (mains- synchronised clock precision) or quartz motor
- +/- 2.5 s/day clock precision (quartz motor)
- 100 hour running reserve (quartz motor)
- Surface-mounting possible with a wall bracket and a terminal cover (cat no : 412859)
- Unit width: 3 modules of 17.5 mm each

DX³ MCBs

MCBs for AC applications till 63 A

Technical characteristics p. 273-274

- 10 kA ISI marked as per IS/IEC 60898-1 2002
- Integrated label holder
- Sliding bottom clamp
- Improved air channels
- Color coded On/Off indication on dolly
- Biconnect lower terminals
- IP 20 protected terminals
- Sliding shutters
- DC-80 V per pole - 1 kA

DX³ isolators

ISs for AC applications upto 125 A

4065 00

4065 10

4065 20

Isolators for AC applications upto 125 A
 ISI marked as per IEC 60947-3
 Integrated label holder
 Ergonomic red color dolly
 Sliding bottom clamp
 Double break mechanism
 Improved air channels
 Color coded On/Off indication on dolly
 Biconnect lower terminals
 IP 20 protected terminals
 Sliding shutters

Pack	Cat.Nos	Isolators	Nominal rating In (A)	Number of modules
		2 pole 415 V~		
1/5/60	4065 00		32	2
1/5/60	4065 01		40	2

DX³ RCD add on module

For 125 A

4105 68

4105 78

Conform to IEC 60947-2
 AC type : detect AC components faults
 Hpi type : detect faults with AC and DC components, increased Immunity to false tripping
 For mounting on the right-hand side of 1.5 module per pole DX³ MCBs
 Easy & fast association mechanism
 Terminal cover for locking
 70 sq mm terminals

Pack	Cat.Nos	DX ³ RCD	
		2 pole 240 V~, AC Type	
		Nominal rating In (A)	Number of modules
1	4105 68	125 A	4
1	4105 69	125 A	4

1	4105 82	125 A	6
		Four pole 415 V~, HPI type	
		30 mA	
1	4106 38	125 A	6
1	4106 39	125 A	6
1	4106 42	125 A	6

DX³ auxiliaries

Auxiliaries common for MCBs, Isolators, RCCBs & RCBOs

Easy & fast fixation on site
On site clip on mounting
Clip on fitting on left side

Pack	Cat.Nos	Signalling auxiliaries	Number of modules
1	4062 50	Auxiliary changeover switch 6 A	0.5
1	4062 52	Fault signalling changeover switch 6 A	0.5
1	4062 64	Changeover + fault signalling switch	1
Control auxiliaries			
1	4062 76	Shunt release 12 /48 V AC/DC	1
1	4062 78	Shunt release 110/415 V AC	1
1	4062 80	Undervoltage release 24/48 V AC/DC	1
1	4062 82	Undervoltage release 230 V AC	1
1	4062 86	Pop over voltage release	1
1	4062 90	Motor control 24/48 V AC/DC	1
1	4062 91	Motor control 230 V AC	1
1	4062 93	Motor control auto reset 24/48 V AC/DC	2
1	4062 95	Motor control auto reset 230 V AC	2
1	4062 88	Automatic resetter	2
1	4062 89	Automatic resetter with autotest	2
Rotary handle			
10	4063 19	Black rotary handle	-
10	4063 20	Yellow/red rotary handle	-
Support for padlock			
10	4063 03	Support for padlock till 63 A	-
Sealable screw cover			
10	4063 04	Devices upto 63 A	-
10	4063 06	For 80-125 A devices	-
1/2 module spacing unit			
10	4063 07	1/2 module spacing unit	0.5
5 mm padlock			
10	4063 13	1/2 module spacing unit	-

DX³ auxiliaries

Manual changeover switch

Compact design
Manual switching operation
Easy to assemble
Ergonomic design

Pack	Cat.Nos	For 1 mod/pole MCBs and ISs	Number of modules
5	4063 14	Manual change-over switch for DP	2
5	4063 15	Manual change-over switch for TP	3
5	4063 16	Manual change-over switch for FP	3

DX³ RCD add on module with measurement & metering

4106 57

Conform to IEC 60947-2
 Hpi type: detect faults with AC and DC components, increased
 Immunity to false tripping
 Inbuilt measurement/metering option
 Measurement - V, A, F, PF, kWh, kVA, kVAr, THD
 Metering - V, A, F, kWh
 RS 485 port for remote reading
 Di-electric test button inbuilt
 Ergonomic test button
 Scroll button for easy readings
 RLCD display on front facia
 For mounting on the right-hand side of 1.5 module per pole DX³ MCBs
 Easy & fast association mechanism
 70 sq mm terminals

Pack	Cat.Nos	Adjustable metering, 4 pole 415 V [~]	
		Nominal rating In (A)	Number of modules
1	4106 57	63 A	7
1	4106 58	125 A	7
1	4106 59	125 A	7

Adjustable measurement

DX³ time switches

4126 41

4126 54

4126 57

4126 29

Technical characteristics p. 291-300

Daily and weekly time switch
 Quick and easy programming due to the option to select day blocks, day blocks can be individually set or selected from the blocks Mon–Sun, Mon–Fri or Sat–Sun
 Programming with precision to the second
 Switch times visible in weekly overview on display

Alpharex³ digital time switches

Pack	Cat.Nos	
1	4126 31	AlphaRex ³ D21, 1 channel
1	4126 41	AlphaRex ³ D22, 2 channels
1	4126 34	AlphaRex ³ D21s, 1 channel, with control input

Alpharex³ digital time switches - Astro

		<ul style="list-style-type: none"> For switching on/off lights and other electric devices according to the rising/setting of the sun With combination function for creating switching programs in which the devices are switched according to astronomical time and/or fixed preset times Daily astronomical calculation of the sunrise/sunset times based on the entered location or location coordinates
1	4126 54	AlphaRex ³ D21 astro, 1 channel
1	4126 57	AlphaRex ³ D22 astro, 2 channels

Alpharex³ yearly time switch

		<ul style="list-style-type: none"> Yearly and weekly time switch with additional astronomical function for all channels 84 switching programs per channel, comprising: <ul style="list-style-type: none"> 28 weekly programs 28 yearly programs 28 special programs (priority program)
1	4126 29	AlphaRex ³ DY21, 1 channel
1	4126 30	AlphaRex ³ DY22, 2 channels

Programming accessories

1	4128 72	Data key
1	4128 73	PC adapter for USB port

DX³ time switches

4128 12

4128 14

Technical characteristics p. 296-300

With synchronous (mains-synchronised clock precision) or quartz motor

- +/-2.5 s/day clock precision (quartz motor)
- Surface-mounting possible with a wall bracket and a terminal cover (Cat.No 4128 59)
- Unit width: 3 modules of 17.5 mm each

Pack	Cat.Nos	Twilight switches
1	4126 23	<ul style="list-style-type: none"> • Including light sensor • Wire for light sensor: 2 x 1.5 mm², maximum wire length: 50 m • LED switching status indicator Luxo switch

Pack	Cat.Nos	MicroRex analog time switches
1	4128 12	In accordance with IEC 60730-1 and 60730-2-7 Manual switching ON/automatic/OFF daily/weekly switching dial with captive segments Clock precision: +/- 5 min for the daily time switch -10 °C to +55 °C operating temperature MicroRex T31 – Daily time switch
1	4128 13	MicroRex QT31 – Daily time switch
1	4128 14	MicroRex W31 – Weekly time switch
1	4127 90	MicroRex QT11 – Daily time switch
1	4127 94	MicroRex QW11 – Weekly time switch

Pack	Cat.Nos	Accessory
1	4128 59	Wall bracket

DX³ contactors

4125 44

Technical characteristics p. 296-300

Conform to IEC/EN 61095

Space for power supply busbar on top (up to 63 A)

Pack	Cat.Nos	Power contactors CX³
1	4125 44	25 A 2 NO contactor
1	4125 45	40 A 2 NO contactor
1	4125 47	63 A 2 NO contactor

EMDX³ electrical energy meters

┌ rail mounting

0046 74

Measure the electricity consumed by a single-phase or three-phase circuit downstream of the electricity distribution metering. Display electricity consumption in kWh, as well as other values such as current, active energy, reactive energy and power (depending on the catalogue number).

Conform to standards IEC 62053-21/23, IEC 62052-11 and IEC 61010-1. MID compliance ensures accuracy of the metering with a view to recharging for the electricity used.

Pack	Cat.Nos	Single-phase meters
1	0046 77	Direct connection 63 A - 2 modules RS 485 output
1	0046 80	Three-phase meters Direct connection 63 A - 4 modules RS 485 output
1	0046 84	Connection with CT 5 A - 4 modules RS 485 and pulse output

N

EMDX³ multi-function measuring units

┌ rail mounting

N

0046 76

Conform to standards:

- IEC 61557-12
- IEC 62053-22 class 0.5 S
- IEC 62053-23 class 2

Pack	Cat.Nos	EMDX ³ modular
		For mounting on ┌ rail Width: 4 modules • LCD display • Measurement of currents, voltages, active, reactive and apparent power and internal temperature • Dual tariff metering: - Active energy consumed - Reactive energy consumed - Operating time - Power factor • THD voltages and currents up to order 51 • Programmable alarms on all functions • Outputs for controlling wiring devices, alarm feedback and pulse feedback
1	0046 76	EMDX³ RS 485 unit Data transmission via RS 485 communication interface and pulses

SPDs for telephone lines

Technical characteristics p. 304-306

Pack	Cat.Nos	SPDs for telephone and data lines
		Overvoltage protection of equipment such as telephones, modems, video door entry phones, RS485 networks, measurement loops, etc. Not compatible with VDSLs SPDs needed to provide complete protection of the installation when low voltage SPDs are present (TS/IEC 61643-12). SPDs with status indicators: - Green: SPD operational - Orange: plug-in module need to be replaced Compliant with EN/IEC 61643-21 standards "Analogue" SPD (STN, non- unbundled ADSL, etc.)
1	0038 28	In/I _{max} : 5/10 kA Max. voltage(U _c): 170 V Level of protection (Up): 260 V Number of modules: 1
1	0038 29	In/I _{max} : 5/10 kA Max. voltage(U _c): 48 V Level of protection (Up): 100 V Number of modules: 1

1: 1P+N and 3P+N: L-N and N-PE protection modes (common and differential modes), the N pole being protected by encapsulated spark gaps. Also called sometimes 1+1 and 3+1

Technical data

Specifications	IS/IEC 60898-1 2002
Number of poles	SP, SPN, DP, TP, TPN, FP
Characteristics	C & D Curve
Breaking capacity	10 kA 0.5 A to 63 A as per IS/IEC 60898-1 2002 16 kA for 0.5 A to 25 A as per IEC 60947-2
Rated voltage	230 V/400 V
Current limitation class	Class 3
Frequency	50 Hz/60 Hz
Minimum operating voltage	12 V AC/DC
Enclosures	Polyester self extinguishing, heat and fire resistant according to IEC 60898-1, glow-wire test at 960 °C for external parts made of insulating material necessary to retain in position current-carrying parts and parts of protective circuit (650 °C for all other external parts made of insulating material)
Mounting position	Vertical / Horizontal / Upside down / On the side
Fixing	On symmetric rail EN/IEC 60715 or DIN 35
Maximum cable size	Top/Bottom 1 x 1.5 mm ² to 35 mm ² Rigid cable 2 x 1.5 mm ² to 16 mm ² Top/Bottom 1 x 1.5 mm ² to 25 mm ² Flexible cable 2 x 1.5 mm ² to 10 mm ²
Applied connection torque	Recommended : 2.5 Nm Minimum : 2 Nm Maximum: 3 Nm
Mechanical endurance	20000 operations without load
Electrical endurance	10000 operations with load (under In*cos φ = 0.9) 2000 operations under In, DC current
Permissible ambient temperature	0.5 to 63A - Maximum + 70 °C Minimum -25 °C

Specifications	IEC 60947-2
Number of poles	SP, DP, TP, FP
Breaking capacity	10 kA 80 A to 125 A as per IEC 60898 16 kA for 80 A to 125 A as per IEC 60947-2
Rated voltage	230 V/400 V
Current limitation class	Class 3
Frequency	50 Hz/60 Hz
Minimum operating voltage	12 V AC/DC
Enclosures	Polyester self extinguishing, heat and fire resistant according to IEC 60898-1, glow-wire test at 960 °C for external parts made of insulating material necessary to retain in position current-carrying parts and parts of protective circuit (650 °C for all other external parts made of insulating material)
Mounting position	Vertical / Horizontal / Upside down / On the side
Fixing	On symmetric rail EN/IEC 60715 or DIN 35
Maximum cable size	Top/Bottom 1 x 1.5 mm ² to 50 mm ² Rigid cable 2 x 1.5 mm ² to 25 mm ² Top/Bottom 1 x 1.5 mm ² to 35 mm ² Flexible cable 2 x 1.5 mm ² to 20 mm ²
Applied connection torque	Recommended : 2.5 Nm Minimum : 2 Nm Maximum: 3 Nm
Mechanical endurance	20000 operations without load
Electrical endurance	10000 operations with load (under In*cos φ = 0.9) 2000 operations under In, DC current
Permissible ambient temperature	80 to 125 A - Maximum + 70 °C Minimum -25 °C

Choice of DX³ MCBs for capacitor banks

This table shows the rated current of MCBs to be used when controlling capacitor banks so as to guarantee its function and shortcircuit protection.

Overload protection is not necessary since these installations cannot be overloaded.

This data refers to shortcircuit protection in absence of harmonics or heavy transitory currents.

■ Technical data

Specification	SPEC/E-12/1/14
Number of poles	1
Characteristic	As applicable
Line terminal	Indicated by LN
Load terminal	Indicated by LD
Rated Voltage	130 V _~
Max. Operating Voltage	440 V _~
Min. Operating Voltage	12 V _~
Voltage resistance	> 2500 V _~
Enclosure	Moulded out of DMC (thermoset plastic) bone grey colour, flamability class V1-UL94, Tracking index - 600+volts
Dolly	Black, can be locked or lead sealed in ON or OFF position
Fire retardent grade of enclosure	V
Mounting position	Optional
Fixing	Snap fixing on standard DIN RAIL profile EN 50023 - 35 x 7.5
Terminals	With flat Cu terminal extension mounting as per skel 3700. Current Carrying Capacity 100 Amp. Max. Continuous.
On-Off indication	MCB in on position when marking I-ON appears on dolly. MCB in OFF position when making O-Off appears on dolly.
Mech. Service Life	10000 operation
Electrical Endurance	6000 operation at rated load
Climate resistance :	25/95-40/93 (°C/RH)
Permissible Ambient :	T max. - 45 °C, T min - 25 °C temperature
Shock resistance	20 g minimum 20 impacts duration of shock 13 ms.
Vibration resistance	3 g

As per international STD, MCB in 'ON' condition when dolly is in upper position.

When supply is given at lower terminals

Single pole MCB

Double pole MCB

• Supply terminals

When supply is given at upper terminals

Single pole MCB

Double pole MCB

Derating of MCB for use with fluorescent lights

Ferromagnetic and electronic ballasts have a high inrush current for a short time. These currents can cause the tripping of circuit breakers. At the time of the installation, it should take into account the maximum number of ballasts per circuit breaker that the manufacturers of lamps and ballasts indicate in their catalogues.

Influence of the altitude

	≤2000 m	3000 m	4000 m	5000 m
Dielectric holding	3000 V	2500 V	2000 V	1500 V
Max operational voltage	400 V	400 V	400 V	400 V
Derating at 30 °C	none	none	none	none

Derating of MCBs function of the number of devices side by side:

When several MCBs are juxtaposed and operate simultaneously, the thermal evacuation of the poles is limited. This results in an increase in operating temperature of the circuit breakers which can cause unwanted tripping. It is recommended to apply the following coefficients to the rated currents.

Influence of the altitude

Number of circuit breakers side by side	Coefficient
2 - 3	0.9
4 - 5	0.8
6 - 9	0.7
≥10	0.6

These values are given by the recommendation of IEC 60439-1, NF C 63421 and EN 60439-1 standards.

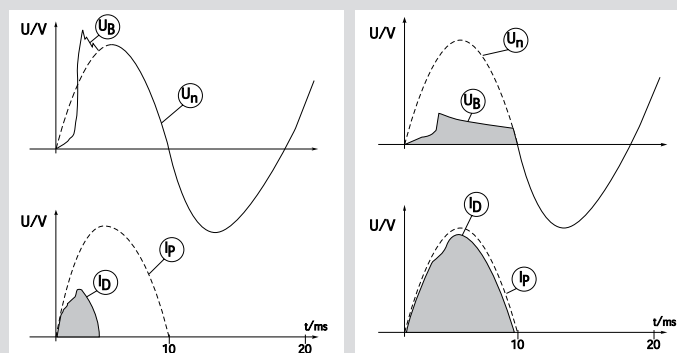

Tripping characteristics

Standards has established different tripping characteristics depending on minimum and maximum values of magnetic trip.

DX ³ MCB	Type	Im1	Im2	Typical application
0.5 A to 63 A	D	10 In	20 In	Protection of cable and appliance which has very high starting currents.
6 A to 63 A	C	5 In	10 In	Protection of cable used for lighting load, power load and induction loads with high starting current.

Im1 - hold limit
Im2 - Trip limit

IP = Prospective short circuit current

Technical data

Association of protection devices

Association is the technique by which the breaking capacity of a MCB is increased by coordinating it with another protection device, placed upstream. This coordination makes it possible to use a protection device with a breaking capacity which is lower than the maximum prospective short-circuit current at its installation point

The breaking capacity of a protection device must be at least equal to the maximum short-circuit which may occur at the point at which this device is installed.

In exceptional cases, the breaking capacity may be lower than the maximum prospective short-circuit, as long as:

- It is associated with a device upstream which has the necessary breaking capacity at its own installation point
- The downstream device and the trunking being protected can withstand the power limited by the association of the devices.

Association therefore leads to substantial savings.

The association values given in the tables on the following pages are based on laboratory tests carried out in accordance with IEC 60947-2.

Note: In the case of single phase circuits (protected by P+N or 2P MCBs) in a 415 V AC supply, supplied upstream by a 3-phase circuit, it is advisable to use the association tables for 230 V.

Example of association

3-level association

An association may be created on three levels if one of the conditions below is met.

- The upstream device A must have an adequate breaking capacity at its installation point. Devices B and C are associated with device A. Simply check that the association values B+A and C+A have the necessary breaking capacity.

In this case, there is no need to check the association between devices B and C.

- The association is made between successive devices: Upstream device A, which has an adequate breaking capacity at its installation point, device C is associated with device B which is in turn associated with device A.

Simply check that the association values C+B and B+A have the necessary breaking capacity. In this case, there is no need to check the association between devices A and C.

Association in IT connection systems

The values given in the tables should only be used for TN and TT systems.

Although this practice is not widely used, these values may also be used for installations with IT systems. It is therefore advisable to check that each protection device, on its own, can break, on a single pole, the maximum double fault current at the point in question.

Association between distribution boards

Association applies to devices installed in the same distribution board as well as in different boards. It is therefore generally possible to benefit from the advantages of the association between devices located, for example, in a main distribution board and in a secondary board.

MCB - switch association

The switches must be systematically protected by an MCB placed upstream. There is considered to be protection against overloads if the rating of switch I is at least equal to that of the upstream MCB, D. If this is not the case, the thermal stresses (devices and conductors) must be checked. The tables on the following pages give the breaking capacity limits of the MCB - switch associations.

Discrimination of protection devices

Discrimination is a technique which consists of coordinating the protection in such a way that a fault on one circuit only trips the protection placed at the head of that circuit, thus avoiding rendering the remainder of the installation inoperative. Discrimination improves continuity of service and safety of the installation

Discrimination rules are set by the regulations concerning public buildings and for safety installations in general.

Discrimination between A and B is said to be "total" if it is provided up to the value of the maximum prospective short-circuit at the point at which B is installed.

By extension, in the tables on the following pages, total discrimination, indicated by T, means that there is discrimination up to the breaking capacity of device B.

Discrimination between A and B is said to be "partial" in the other cases.

The discrimination limit (given in the following tables) is therefore defined. This gives the short-circuit current value below which only MCB B will open and above which MCB A will also open.

There are a number of techniques for providing discrimination:

- Current discrimination, used for terminal circuits which have low short-circuits.
- Time discrimination, provided by a delay on tripping the upstream MCB
- Logical discrimination, a variant of time discrimination, used on electronic MCBs via a special link between the devices.

Since almost all faults occur during use, partial discrimination may be adequate if the discrimination limit is higher than the value of the maximum short-circuit which may occur at the point of use (or at the end of the trunking). This is referred to as "operating discrimination". This technique is very often adequate, more economical and less restricting in terms of implementation.

The discrimination limit for the association DPX 250 ER (160 A) with Lexic MCB 40 A (C curve) is 6 kA. Since the prospective ISC at the point of installation is 8 kA, the discrimination is not total. However, there is discrimination at the point of use at which the prospective short-circuit is only 3 kA.

Current discrimination

This technique is based on the offset of the intensity of the tripping curves of the upstream and downstream MCBs. It is checked by comparing these curves and checking that they do not overlap. It applies for the overload zone and the short-circuit zone, and the further apart the ratings of the devices, the better the discrimination.

- On overloads

To have discrimination in the overload zone, the ratio of the setting currents (I_r) must be at least 2.

- On short-circuits

To have discrimination in the short circuit zone, the ratio of the magnetic setting currents (I_m) must be at least 1.5.

The discrimination limit is then equal to the magnetic release current $I_m A$ of the upstream MCB. The discrimination is then total as long as I_{scB} is less than $I_m A$.

Current discrimination is therefore very suitable for terminal circuits where the short-circuits are relatively weak.

In other cases, time discrimination may be used together with current discrimination.

Current discrimination

The discrimination is total for I_{scB}

I_{scB} : maximum short-circuit at the point at which MCB B is installed

When the downstream MCB B is a limiting device, the short-circuit current is limited in terms of time and amplitude. The discrimination is therefore total if the limited current I_{scB} , which device B allows to pass, is lower than the tripping current of device A

I_{scB} : prospective short-circuit at the point at which the device is installed
 I'_{scB} : short-circuit limited by device B

Time discrimination

This technique is based on the offset of the times of the tripping curves of the MCBs in series. It is checked by comparing the curves and is used for discrimination in the short-circuit zone. It is also used in addition to current discrimination in order to obtain discrimination beyond the magnetic setting current of the upstream MCB ($I_m A$).

The following is necessary:

- It must be possible to set a time delay on the upstream MCB
- The upstream MCB must be able to withstand the short-circuit current and its effects for the whole period of the time delay
- The trunking through which this current passes must be able to withstand the thermal stresses (I^2t).

The non-tripping time of the upstream of the downstream device.

DPX MCBs have a number of time delay setting positions for creating discrimination with a number of stages.

Technical data
Coordination between Modular Circuit-Breakers and fuses, three-phase network (+ neutral) 400 / 415 V_~ according to standard IEC/EN 60947-2:

For TT or TN neutral system in 240/415 V network, to know the breaking capacity of the combination of a double pole breaker (connected between phase and neutral under 230 V) downstream of a triple-pole circuit-breaker, take the values shown in Tables 230/400 V.

	40 A	50 kA	50 kA
	50 A	36 kA	36 kA
	63 A	36 kA	36 kA

All these values are also valid for circuit breakers associated to differential blocks.

According to the curves and ratings of circuit breakers, attention to the magnetic (or electronic) threshold and to the size of upstream circuit breakers which must necessarily be higher.

Selectivity between two levels of protection

- The downstream circuit breaker must always have a magnetic threshold and a rated current lower than those of the upstream protection.
- Selectivity is indicated total (T) if there is selectivity up to the value of breaking capacity (according to IEC / EN 60947-2) of the downstream circuit breaker.

Selectivity between modular circuits breakers and fuses:

- Selectivity limit at 400 V_~: values in Ampere.

Selection chart*

DX³ MCBs (10 kA) and RCBOs 3 phase motor application

Motor H.P.	KW	MCB rating (A)	
		Star Delta	DOL
1	0.75	-	1.6 A
1.5	1.10	-	2 A
2	1.50	-	3 A
3	2.25	-	4 A
4	3.00	-	10 A
5	3.75	10 A	10 A
6	4.50	10 A	10 A
7.5	5.50	16 A	16 A
10	7.50	16 A	20 A
12.5	9.30	20 A	25 A
15	11.00	25 A	32 A
17.5	13.00	25 A	32 A
20	15.00	40 A	40 A
25	18.50	40 A	50 A
30	22.50	50 A	63 A
35	26.00	63 A	-

For MCB/RCBO ratings :

Single phase = $P = VI$

Three phase = $P = 3 VI \cos \phi = 1.732 \times VI \times 0.8$

Note : One lighting circuit can have upto 800 W or upto 10 points.

One power circuit can have upto 3000 W or upto 2 power points.

* The data given above is only for guidance.

The exact rating must be selected only after considering the motor characteristics.

Technical data

Nature and consequences of electrical risks

Direct and indirect contact

All electrical risks for people are the result of direct or indirect contact. What are these contacts? And how can we protect ourselves against them?

All the answers appear in the following section.

Electrical risks do not just concern people : these risks - especially fire affect installations as well. A 500 mA current, for example, flowing through combustible material is sufficient to ignite such material after a certain time. Every electrical installation is subject to current leakages which can vary considerably depending on such factors as the installation's condition, age, environment, etc.

These current leaks may flow through the fabric of the building (trunking, metal girders or other metal components), generating heat which in turn may lead to fire.

Direct contacts

Direct contact is caused by humans and may be due to either carelessness or clumsiness.

What is a direct contact? How can we protect ourselves? Here are the answers...

This is when someone makes contact with a live electrical component of a device or installation.

For example :

- a person inadvertently touching a live cable.
- a child sticking a metal object into a power socket.
- using male/male extensions or unprotected test cables.

In this case only basic protection is effective

Other examples

Someone touching a live busbar in a distribution panel or cabinet, or someone touching flush-mounted electrical trunking with the end of a tool, etc. In this case basic protection plus additional protection is effective.

How can we protect ourselves?

There are two ways (independent of the neutral earthing system) of ensuring that personnel are protected against direct contact.

• Preventing access to live parts where possible.

Basic protection via physical or electrical isolation of live parts.

This protection must ensure that live parts cannot be touched, even inadvertently.

How?

By using barriers, enclosures, closed cabinets which physically or electrically isolate live parts presenting a danger to the user, shuttered sockets, or insulation.

• Additional protection

Must be provided by a 30-mA residual current device such as Lexic range of residual current devices. This protection is required in case the basic protection detailed above fails.

Technical data

Indirect contacts

Indirect contacts are independent of humans : it results from an internal hardware fault.

What is an indirect contact?

How can we protect ourselves? Here are the answers...

What is an indirect contact?

This is when a person makes contact with a metal earthed part which has accidentally been powered up following an insulation fault. This type of contact is very dangerous as, unlike direct contact, it is completely unexpected. For example, a person touching the metal frame of an electrical appliance which has defective insulation may be electrocuted through no fault of their own if the appliance is not protected.

How can we protect ourselves?

There are three possibilities :

- Preventing access to potentially dangerous metal components via class II protection.
- Good connection of all exposed conductive parts to an effective earth.
- A protective RCD according to the neutral earthing system.

A person is in danger of electrocution if the fault current raises the voltage of the accessible metal part above 50 V to earth.

Important note:

Under the Indian Electricity Rules [rules 61 (A), 71 (1) and 73 (1)], installation of an RCCB is mandatory in all installations of 5 KW and above, in all luminous tube signs and X-ray installations. The bureau of Indian standards recommends that RCCBs installed at construction sites, temporary installations, agriculture and horticulture premises, limit the residual current to 30 mA.

Residual current devices, selection and operation

The main function of a residual current device is to ensure that people are protected from any risk of electrocution. It can also ensure protection against risk of fire.

What is the nature of these risks ? What are the consequences ?

Here are the answers...

Risks of electrocution-

The dangerous effects of electricity depend on two factors-:

- the flowing time through the human body
- the current value

These two factors are independent and the importance of the risk varies in accordance with the level of each factor.

The dangerous current value through a human body depends on the touch voltage and touch resistance of the human body.

In practice, the current value is defined using a standard "safety" voltage of 50 V. This voltage takes into account the maximum current which can be withstood by a human being with a minimum internal electrical resistance in given conditions. It also takes into account the maximum permissible time for the current to pass through the body without dangerous physio-pathological effects.

50 V is considered as the safe limit of voltage for human body in dry condition.

How does an electrical current affect the human body?

When subject to a voltage, the human body reacts like any other receiver with a given internal resistance. An electrical current passes through the body with three serious risks :

- Locking of the muscles, or tetanisation : the muscles through which the current passes contract and remain contracted : if this includes the rib cage, breathing may be impeded.
- Action on the heart : the cardiac rhythm is completely disrupted (ventricular fibrillation).
- Thermal effects may cause varying levels of damage to body tissue, including severe burns in the case of very high currents.

Examples of electrocution by direct or indirect contact.

Technical data

Effect of current on human body

The standards define the following curves, which take into account the two parameters required to assess the risk :

$i\Delta$: current flowing through body.
 t : time taken for current to pass through body.

These curves show the various zones of effect of an alternating current on people : they derive from IEC 60 479 and determine

4 main risk zones

Zone designation	Physiological effects
zone AC-1	Usually no reaction
zone AC-2	Usually no harmful physiological effects
zone AC-3	Usually no organic damage to be expected. Likelihood of cramp like muscular contractions and difficulty in breathing for durations of current-flow longer than 2 s. Reversible disturbances of formation and conduction of impulses in the heart, including atrial fibrillation and transient cardiac arrest without ventricular fibrillation increasing with current magnitude and time
zone AC-4	Increasing with magnitude and time, dangerous pathophysiological effects such as cardiac arrest, breathing arrest and serious burns may occur in addition to the effects of zone-3
zone AC-4.1	Probability of ventricular fibrillation increasing up to about 5% C1 - C2
zone AC-4.2	Probability of ventricular fibrillation up to about 50% C2 - C3
zone AC-4.3	Probability of ventricular fibrillation above 50%

* For durations of current flow below 10 ms, the limit for the body current at line b remains constant at a value of 200 mA.

A residual current device continuously measures the difference between the value of the input and the output currents. If the value is not equal to zero, this indicates a leak.

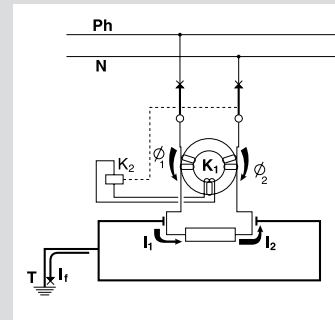

When this leak reaches the level at which the differential is set (its sensitivity), the device trips and breaks the circuit.

What are the operating principles of a residual current device?

What are the selection criteria for a residual current device? Here are the answers...

Operating principle of a residual current device

No fault present

Therefore no current is induced in coil K₁, and coil K₂ is not excited. The contacts do not open. The equipment operates normally

$$I_r = 0, \text{ thus}$$

$$I_1 = I_2$$

$$\Phi_1 = \Phi_2$$

$$\Phi_1 - \Phi_2 = 0$$

Insulation fault

A current is thus induced in coil K₁...

$$I_r \neq 0$$

$$I_1 > I_2, \text{ thus}$$

$$\Phi_1 > \Phi_2, \text{ thus}$$

$$\Phi_1 - \Phi_2 \neq 0$$

...coil K₂ is excited, the contacts open and the equipment is automatically switched OFF

Selecting a residual current device

First determine your requirement. This exists on two levels :

- 1 The need to protect against direct or indirect contacts.
- 2 The need to ensure protection against overloads and short-circuits.

If protection against indirect contact is required, use residual current devices with a sensitivity of :

- 30 mA,
- 100 mA,
- 300 mA,

The rating (40, 63 A, etc.) is selected according to the load.

If protection against direct contact is required, use residual current device with a sensitivity of 30 mA.

The sensitivity of a residual current device $I\Delta_n$ is the current level at which tripping is sure to occur. To do this, the standards concerning residual current devices stipulate that tripping must occur between $I\Delta_n / 2$ and $I\Delta_n$.

Technical data
Types of residual current device

There are 2 types of RCD : the AC type and the A type
Both types are produced in the "S" (discriminating) or normal versions.
They conform to Indian and International standards IS 12640, IEC 61008 and IEC 61009 as well as European standards EN 61008 and EN 61009.

• Type A 

Sensitive to residual alternating currents and residual currents with a DC component.

Use : special applications

- if it is possible that the fault currents are not purely sinusoidal (rectifier bridge, etc.)

• Type AC 

Sensitive to residual alternating currents

Use : standard applications

• Type S 

Delayed trip for discrimination with other residual current devices.

Use : for discrimination with a downstream device.

• Type Hpi 

• Enhanced immunity to unwanted tripping in environments with disturbances. eg. diesels, computers, printers, etc.

• Detects faults with DC components eg. thyristors, trio etc.

Residual current circuit-breaker with or without overload protection? Which do I choose?

Choose a residual current circuit-breaker (RCCB) if you do not need to protect against overload and short circuits (caution! an RCCB must be connected to some form of line protection device : either a circuit-breaker or a fuse).

Choose a residual current circuit-breaker with overload and short circuit protection (RCBO) if this type of protection is not available.

Residual current circuit-breakers without overload and short circuit protection (RCCB)

These provide two functions : fault current detection, measurement and cut-off : and isolation of an installation.

RCCBs are governed by standards IS 12640 (part 1), IEC 61008-1.

Residual current circuit-breakers with overload and short circuit protection (RCBO)

These provide three functions : fault current detection, measurement and cut-off : protection against overloads and short-circuits : and isolation of an installation.

Residual current circuit-breakers are governed by standards IS 12640 (part 2), IEC 61009-1.

The "test" function

A residual current device is a safety device, and it is therefore vital that it is regularly tested. This function is therefore required by the standard governing residual current protective devices, and ensures correct operation. All Lexic RCDs are equipped with this function.

Note : We offer Type AC, Type A-S and Type Hpi RCDs

Compatibility MCBs/add-on modules

Breaking capacity	Number of poles	Add-on module for 1.5 module/pole MCBs
16 kA	2P, 4P	$I_n \geq 80$ A
25 kA	4P	$I_n \geq 32$ A
	2P	$I_n \geq 40$ A
	4P	$I_n \geq 12,5$ A
50 kA	2P	$I_n \geq 32$ A
	2P, 4P	All range

Operating principle

Temporarily electrical disturbances and other external events can cause unwanted tripping of different devices protecting electrical installation

STOP&GO verifies automatically the state of the installation, before resetting and launches a visual and close a contact in case of permanent fault detection (short-circuit or residual current)

After verifying the state of the installation, STOP&GO automatic resets the associated protection device in order to immediatly re-establish power supply and avoid unwanted consequences

STOP&GO does not protect the installation against lightning strikes
For an efficient protection against lightning, use voltage surge protectors

The Autotest version is specially suitable for installations equipped with residual current protection devices (RCD's and RCBOs)
STOP&GO periodically does an automatic test of the functioning of residual current protection devices. The manual test is no longer needed

Installation without STOP&GO

Installation with STOP&GO

Mains fault due to temporarily electrical disturbances
Electrical devices are not powered anymore

STOP&GO automatic resets the associated protection device in order to immediatly re-establish power supply

Technical characteristics of auxiliaries

Max. connection cross-section: 2.5 mm²
Operating temperature: - 25 °C to + 70 °C

Shunt trips

Equipped with a signalling contact which indicates tripping of the shunt trip and automatically breaks the coil.

Min. and max. voltage: 0.7 to 1.1 Un

Tripping time: less than 20 ms

Power consumption: at 1.1 x 48 V = 121 VA
at 1.1 x 415 V = 127 VA

Impedance: 12 to 48 V = 23 Ω
110 to 415 V = 1640 Ω

Consumption	Umin.	Umax.
12 to 48 V	522 mA	2610 mA
110 to 415 V	69 mA	259 mA

Undervoltage releases

Pull-in voltage ≥ 0.55 Un

Tripping time: 0 to 300 ms \pm 10% (adjustable)

Power consumption: 24 V \sim and = : 0.1 VA
48 V \sim and = : 0.2 VA
230 V \sim : 1 VA

Stand-alone releases for N/C push-buttons

Min. and max. operating voltage: 196 to 250 V \sim

Power consumption: 1.4 VA

Signalling auxiliaries

Umin.: 24 V \sim / = and Imin.: 5 mA

Protection of DC circuits

DX³ 6000 and DX³ 10000 MCBs (1P/2P/3P/4P - I_n ≤ 63 A) designed for use in 230/400 V~ supplies, can also be used in DC circuits. In this case, the following deratings and precautions must be taken into account:

1 - Protection against short-circuits

Max. magnetic tripping threshold: multiplied by 1.4

Example: For a C curve MCB for which the AC tripping threshold is between 5 and 10 I_n, the DC tripping threshold will be between 7 and 14 I_n

2 - Protection against overloads

The time/current thermal tripping curve is the same as for AC

3 - Operating voltage

Max. operating voltage: 80 V per pole (60 V for single-pole + N MCBs). For voltages higher than this value, several poles must be wired in series.

Example: for a 110 V voltage, use a 2-pole MCB and connect the 2 poles in series.

4 - Breaking capacity

4000 A for a single pole MCB at max. voltage (80 V~ per pole)

For other voltages, the breaking capacities are as follows:

DX ³ 6000	voltage	single-pole	2P	3P	4P	
Acc. to IEC 60947.2	Icu	≤ 48 V	6 kA	6 kA		
		110 V		6 kA	6 kA	
		230 V				10 kA
	Ics ⁽¹⁾	≤ 48 V	100 %	100 %		
		110 V		100 %	100 %	
		230 V				100 %

DX ³ 10000	voltage	single-pole	2P	3P	4P	
Acc. to IEC 60947.2	Icu	≤ 48 V	10 kA	10 kA		
		110 V		10 kA	10 kA	
		230 V				15 kA
	Ics ⁽¹⁾	≤ 48 V	100 %	100 %		
		110 V		100 %	100 %	
		230 V				100 %

1: As a % of Icu

5 - Distribution of breaking poles

To choose the MCB and determine the pole distribution necessary for breaking on each of the polarities, it is necessary to know how the installation is earthed.

• Supply with one polarity earthed:

Place all the poles necessary for breaking on the other polarity. If isolation is required, an additional pole must be added on the earthed polarity.

1: Only if isolation required

Protection of DC circuits

Protection of DC circuits

Example: circuit earthed via the negative polarity / $U = 110\text{ V}_{\text{DC}}$ / $I_{\text{sc}} = 10\text{ kA}$ / $I_n = 32\text{ A}$

Protect the positive polarity using an MCB capable of breaking 10 kA at 110 V (DX³ 10000 2P 32 A with 2 poles on the positive polarity)
For isolation, use a DX³ 10000 3P 32 A with 2 poles on the positive polarity and one pole on the negative polarity

DX ³ 10000	voltage	single-pole	2P	3P	4P
Acc. to	≤ 48 V	10 kA	10 kA		
IEC 60947.2 Icu	110 V	10 kA	10 kA	10 kA	
	230 V				15 kA

If isolation required

• Network earthed via a middle point:

Place on each polarity the number of poles necessary for max. I_{sc} breaking at half voltage

1: MCB ($U/2-I_{\text{sc}} \text{ max.}$)

Example: circuit earthed via a middle point / $U = 230\text{ V}_{\text{DC}}$ / $I_{\text{sc}} = 6\text{ kA}$ / $I_n = 10\text{ A}$

Protect each polarity using an MCB capable of breaking 6 kA at half voltage, i.e. 115 V

DX ³ 6000	voltage	single-pole	2P	3P	4P
Acc. to	≤ 48 V	6 kA	6 kA		
IEC 60947.2 Icu	110 V	6 kA	6 kA	6 kA	
	230 V				10 kA

• Isolated earth supply:

Distribute the poles necessary for breaking over the 2 polarities to provide protection in the event of a double earth fault (particularly if there are a number of circuits in parallel)

1: MCB ($U-I_{\text{sc}} \text{ max.}$)

Example: isolated earth circuit / $U = 48\text{ V}_{\text{DC}}$ / $I_{\text{sc}} = 4,5\text{ kA}$ / $I_n = 40\text{ A}$
Protect the installation with an MCB capable of breaking 4.5 kA at 48 V and protect each polarity

DX ³ 6000	voltage	single-pole	2P	3P	4P
Acc. to	≤ 48 V	6 kA	6 kA		
IEC 60947.2 Icu	110 V	6 kA	6 kA	6 kA	
	230 V				10 kA

Functions

- Select menu, go back while in menu
Press > 1 sec. = operating display
- Confirm the selection or accept the parameter
- Select the menu item or set the parameter;
for 2-channel time switches, can be used to select the channel (channel 1 – channel 2)
-

Brief description of programming functions

Text guidance

Guides the user through programming and setup with plain text prompts. Each step can be read on the screen, and the function that is currently active flashes. An integrated display and button light makes operation easy even in poorly lit environments.

Set language

The language selection function can be accessed using the "MENU" button. The language is set to English by default. The following languages can be selected: German, English, French, Italian, Spanish, Dutch, Portuguese*, Swedish*, Norwegian*, Finnish*, Danish*, Polish*, Czech*, Russian*, Turkish*.

*) Excluding AstroRex DY64

Time, date, summer time (daylight saving time)

The time switch is preset at the factory to the current time and date. The time can be changed by selecting "MENU" + "SET".

Reset

Simultaneously pressing all buttons for more than 2 seconds deletes all data. Language, date/time, summer time (daylight saving time) and switch times must be set again.

Data key

If the supply voltage is switched on, the "KEY – READ – WRITE" menu item is automatically opened when a data key is inserted. "WRITE": Program data is written from the time switch to the key. Caution: Any data present on the key will be overwritten. "READ": Program data is written from the key to the time switch; any switching programs on the time switch are overwritten. Only one master switching program, which consists of multiple switching programs, can be saved on the time switch or on the key at a time. If the supply voltage is not connected, the "KEY – READ – WRITE" menu item is not automatically opened when a data key is inserted. The "KEY" function can still be selected from the menu even if the supply voltage is not connected.

PC programming

In addition to the easy, text-guided programming directly on the time switch, switching programs can also be created on a PC with the software program from Legrand and transferred to the time switch using a data key. A data transfer device (Cat.No : 4128 73) is required to transfer switching programs created on a PC to the data key. The device is connected to the PC using the USB plug. In addition to the data transfer device, we also offer a CD with the software and the necessary drivers. PC system requirements: USB port; Windows® XP, Windows® Vista, Windows® 7; approx. 40 MB of free memory.

Brief description of programming functions

Weekly programs

To create a weekly program, select "MENU", "PROGRAM", and then "CREATE" to easily enter programs which are repeated on a weekly basis. A weekly program consists of a switch-on/switch-off times and days which are assigned as "switched-on" or "switched-off". The following predefined blocks can be selected: "MONDAY – SUNDAY", "MONDAY – FRIDAY"¹⁾ or "SATURDAY – SUNDAY"¹⁾; the assigned days of the week are fixed. The switch-on/switch-off times must be entered. The user can also set custom day blocks. By selecting "CUSTOM", switch times can be freely assigned to any days of the week. This option also allows the user to set switch times at midnight.

¹⁾Excluding AlphaRex³ DY, AstroRex DY64

Yearly programs [AlphaRex³ DY21, AlphaRex³ DY22]

This menu item allows the user to enter (additional) yearly programs, which are only executed within a defined validity period. They can overlap with one another and with the weekly programs on the same channel based on an "OR" connective. The validity period is defined by entering the start date (at 00:00:00) and the end date (at 24:00:00). The start date must be entered before the end date. With the "EVERY YEAR" option, the additional switch times have the same validity period each year (Christmas, national holidays, birthdays, etc.) Select the "ONCE" option when additional switch times are needed within a validity period (e.g. during holidays), but the start/end dates of the holiday period change from year to year.

Special programs (priority program) [AlphaRex³ DY21, AlphaRex³ DY22]

Weekly and yearly programs on the same channel are not executed during the validity period of a special program. However, other special programs can be executed during the validity period. Different special programs can overlap with each other based on an "OR" connective. With the "EVERY YEAR" option, the additional switch times have the same validity period each year (Christmas, national holidays, birthdays, etc.). Select the "ONCE" option when additional switch times are needed within a validity period (e.g. during holidays), but the start/end dates of the holiday period change from year to year. Additional options include "MON TO SUN"/"CUSTOM": the respective channel only switches according to the special program; "PROG ON"/"PROG OFF": the respective channel is switched on/off during this time period.

Basic functions for "astro"

Location (astro) [AlphaRex³ D21 astro, AlphaRex³ D22 astro, AlphaRex³ DY21, AlphaRex³ DY22]

The sunrise/sunset times, which change daily, are calculated for the location programmed in the AlphaRex. The unit is delivered with the location set to "GERMANY – SOEST" by default. Enter the actual location for optimal operation. This can be done in two ways. Select "MENU", "SET" and "ASTRO" to access the two options "LOCATION" and "COORDINATES". "LOCATION": With this menu item, the user can select the country and city which is closest to the site of operation. "COORDINATES": Alternatively, the user can select this menu item to set the geographical coordinates of the location. The longitude and latitude values are entered in degrees and arcminutes²⁾ (precision can be set in expert mode). Information on coordinates and time zones can be found in the time zone map included with every time switch.

Offset

By selecting "MENU", "SET", "ASTRO" and "OFFSET", time differentials can be set for the calculated switch times. This can be done in two ways: time offset or angle offset.

In time offset, a time differential can be entered to shift the switch time by up to +/- 120 min relative to the sunrise/sunset times.

In angle offset²⁾, a value can be entered in degrees and arcminutes to shift the switch time by up to +/- 12° 00' relative to the sunrise/sunset times. The time differentials are set separately for sunrise and sunset using the menu items "SUNSET" (opens the screen for setting the sunset offset) and "SUNRISE" (opens the screen for setting the sunrise offset).

Example:

For a time differential of +30 min, the time switch switches 30 min. after sunrise and 30 min. after sunset.

For a time differential of -30 min, the time switch switches 30 min. before sunrise and 30 min. before sunset.

Note:

If the offset is set in degrees, the time switch always switches at points when the brightness is the same, despite the fact that the twilight duration changes over the course of the year. Sunrise and sunset correspond to -50' for the centre of the sun (the edge of the sun is visible on the horizon).

Offset correction function²⁾

Select "MENU", "SET", "ASTRO" and "CORRECTION" to set a time correction for the 6-month periods surrounding summer and winter. The time correction is set to 0 min. by default and can be set from 1 min. up to 30 min. The time correction for sunset is entered in the "SUNSET" menu item. The time correction for sunrise is set in the "SUNRISE" menu item. The correction function overlaps with the calculated astronomical switch times, including the offset settings.

Example:

Setting a time correction extends the daily switched-on time by up to 60 min. in the middle of the six winter months (switches off up to 30 min. later in the morning and switches on up to 30 min. earlier in the evening). In the middle of the six summer months, the time correction reduces the daily switched-on time by up to 60 min. (switches off up to 30 min. earlier in the morning and switches on up to 30 min. later in the evening). The time correction varies continuously between the two max. values during the rest of the year.

Basic settings using a PC and day key

All of the basic settings described above, with the exception of the current time and date, can be set up using the AlphaSoft software from Legrand and imported to the time switch using the data key.²⁾ Excluding AstroRex DY64

AlphaRex³ digital time switches

Additional functions

Relay function

The relay state can be changed by selecting "MENU" and "FUNCTIONS". The relay is preset to the "AUTO" function; the time switch switches at the programmed times. The following can also be selected: "ALWAYS ON", "ALWAYS OFF" and "EXTRA". If "EXTRA" is selected, the switching status specified by the program is inverted. The time switch resumes switching according to the programmed switch times after the next switch command.

Holiday program

In holiday program, the holiday period is set with a start and an end date. It can be activated with the "ACTIVE" program item and deactivated with "PASSIVE". If the holiday program is activated, the time switch does not carry out any programmed switch commands during this time period. Instead, it remains "ALWAYS OFF" or "ALWAYS ON" during the holiday period, as requested. When the holiday period has ended, the time switch resumes switching according to the programmed switch times.

1 h test

The "1 h TEST" function can be used for a switching simulation. If "1 h TEST" is activated, the switch outputs are switched for one hour. After the time has ended, the time switch resumes switching according to the programmed switch times.

PIN code

Input and programming can be locked using a four-digit "PIN CODE". The time switch can be unlocked using the "PIN CODE". The time switch can also be unlocked using the "RESET" function, which also deletes all settings and programs.

Operating hours counter

This function displays the time for which the relay has been switched on and the date of the last reset. Counting range: 65,535 h.

Contrast adjustment

This function allows the user to adjust the display contrast.

Expert mode*

Expert mode is activated by selecting "OPTIONS" and "EXPERT". After expert mode is activated, the following additional functions can be used: control input "extra"¹⁾, control input "out"¹⁾, cycle function, channel-switching function (2-channel time switches), mains-synchronous operation, offset correction function²⁾, geographical coordinates in degrees and arcminutes²⁾.

¹⁾ AlphaRex³ D21s, AlphaRex³ D21 astro, AlphaRex³ DY21 ²⁾ AlphaRex³ astro, AlphaRex³ DY

Control input with switch-off delay

Adjustable switch-off delay via control input. The control input enables an additional switching of the relay, parallel to the switching program. The switch-off delay can be set from 0 s to 23 h 59 min 59 s. The switch-off delay begins as soon as the voltage is removed from the control input.

Control input "extra"*

Override of switching state via control input. If the "EXTRA" function is activated, the switching state specified by the program is inverted. The time switch resumes switching according to the programmed switch times after the next switch command. The "EXTRA" function is ended prematurely if the button is pressed again or if a pulse is received at the control input.

Control input "off"*

Switch off via control input. Activating the "OFF" function causes the time switch to be switched off via the control input. The "OFF" function is ended if the button is pressed again or if a pulse is received at the control input. The time switch resumes switching on/off according to the programmed switch times.

Pulse function

Programmable with precision to the second.

Cycle function

Function for cyclical switching. With this function, the time switch is switched on once within a defined time period and for a defined duration. The cycle time can be set between 2 s and 2 h. The switch-on time can be set between 1 s and 1 h 59 min 59 s.

	Min.	Max.
Cycle	2 s	2 h
Switch-on time	1 s	1 h 59 min 59 s

Random function

If the random function is activated, set switch times are randomly shifted within a range of +/- 15 minutes.

Channel-switching function*

With 2-channel time switches, this function can be activated so that the time switch regularly switches between the outputs assigned to the channels, in order to protect connected devices (for example lights/lamps) or so that two devices can be used simultaneously. The channel-switching function is activated by selecting "MENU", "OPTIONS" and "CHANNEL 1<>2". The time switch switches between the outputs according to whether the menu item "DAILY" (once per day at 12:00 p.m.) or "WEEKLY" (once per week on Sunday at 12:00 p.m.) is selected.

Mains-synchronous operation

Mains-synchronised clock precision. By activating the "SYNC" function and then "ACTIVE", the quartz-controlled time switch becomes a synchronous time switch.

Protection against lightning and overvoltages

Protection against the effects of lightning is essentially based on:

- Protecting buildings using a lightning protection system (LPS or lightning conductors) to catch lightning strikes and to drive the lightning current to earth.
- The use of surge protective devices (SPDs) to protect equipment.
- The design of the earthing system (passive protection of the installation).

Throughout the world, there are millions of lightning strikes each day in the summer (up to 1000 lightning strikes/second). Lightning is responsible for 25% to 40% of all damage to equipment. When added to industrial overvoltages (switching overvoltages due to the operation of internal equipment), they account for more than 60% of all electrical damages, which can be prevented by installing SPDs (according to the country and type of installation - source: insurance companies).

In some countries, and depending on the end use of the building, national regulations may always stipulate the installation of SPDs (for example, Germany, Austria, Norway, etc.). If there are no specific national regulations, SPDs are usually specified by national installation standards (based on HD/IEC 60364 international installation standards) and EN/IEC 62305 standards.

External lightning protection system (LPS) or lightning conductors: protection of buildings (EN/IEC 62305)

An external lightning protection system (LPS) protects buildings against direct lightning strikes. It is generally based on the use of lightning conductors (single rod, with sparkover device, meshed cage, etc.) and/or the metallic structure of the building.

If there is an LPS or if a lightning risk assessment has been carried out in accordance with EN/IEC 62305 standards, SPDs are generally required in the main distribution board (T1 SPDs) and distribution boards (T2 SPDs).

Determination of the SPDs in the main distribution board in accordance with EN/IEC 62305 and TS/IEC 61643-12 (if there is insufficient information available):

LPL: Lightning protection level	Total lightning current of the LPS	Min. value of Imp current of the SPD (T1)	Usage practices
I	200 kA	25 kA/pole (IT: 35 kA min.)	Power installations
II	150 kA	18.5 kA/pole	Rarely used
III/IV	100 kA	12.5 kA/pole	Small installations

1: LPL (Lightning Protection Level)

Surge protective device (SPD) (internal protection)

The SPD

- Protects sensitive devices against overvoltages caused by lightning and industrial overvoltages, by limiting the overvoltages to values that are tolerated by the equipment
- Limits the possible harmful consequences in terms of the safety of people (medical equipment installed in the home, security systems, environmental systems, etc.)
- Maximises the continuity of operation of equipment and limits production losses

SPDs and standards

Standards EN/IEC 61643-11

Type of SPD		Test waves
EN 61643-11	IEC 61643-11	
Type 1 (T1)	Class I (T1)	I_{imp} : 10/350 μ s (discharge current) I_n : 8/20 μ s (nominal current, 15 shocks)
Type 2 (T2)	Class II (T2)	I_{max} : 8/20 μ s (discharge current) I_n : 8/20 μ s (nominal current, 15 shocks)

T1+T2 SPDs: tested in accordance with both methods.

T1 or T1+T2 SPDs are being increasingly used at the supply origin of installations, even when there is no lightning conductor, as they enable higher energies to be discharged and increase the service life the SPD.

HD/IEC 60364 electrical installation standards

According to articles 443 and 534 of HD/IEC 60364 standards and the TS/IEC 61643-12 guides, the use of SPDs in new or renovated buildings is compulsory at the supply origin of the installation in the following cases:

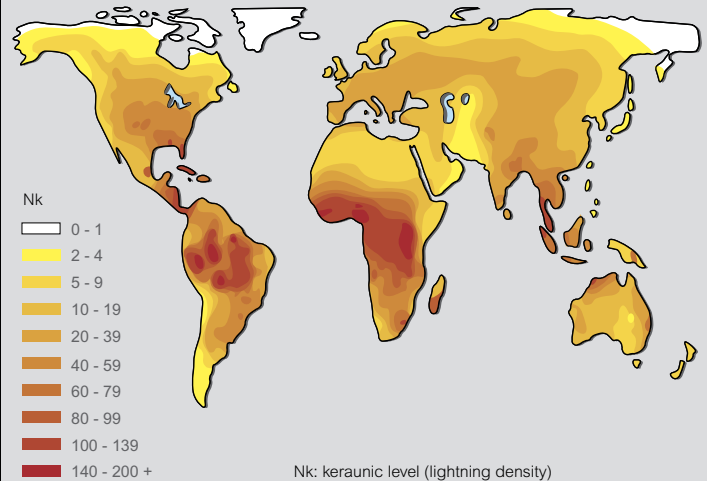

- Buildings with lightning conductors (T1 SPDs, $I_{imp} \geq 12.5$ kA)
- Buildings with totally or partially overhead power supplies in AQ2 geographical areas (article 443.3.2.1 - AQ2: $N_k > 25$, see map below) and based on a risk assessment taking into account the type of power supply to the building (article 443.3.2.2)

According to article 443.3.2.2, SPDs (Type 2) are also required in the following cases:

- Commercial/industrial buildings, public buildings and services, religious buildings, schools and large residential complexes, etc.
- Hospitals and buildings containing medical equipment and/or security systems for people and property (fire alarm, technical alarms, etc.)

Important: it is advisable to install an SPD when the safety of people may depend on the continuity of service of equipment (even if this is not required by national standards). Although not compulsory according to the installation standards, an SPD should always be installed to protect the communication equipment when there is an SPD on the low voltage power network.

These rules should change in 2015. Please consult Legrand.

Protection of distribution boards and sensitive equipment (cascaded protection)

Effective protection against overvoltages cannot generally be assured with a single SPD if its protection level (U_p) is greater than 1.2 kV (EN/IEC 62305 and TS/IEC 61643-12).

When there are overvoltages, an SPD protects equipment by limiting these overvoltages to values that can be tolerated by the equipment. Thus, depending on its discharge capacity (discharge current I_n , I_{max} , etc.) and its protection level (U_p), an SPD will limit these overvoltages to varying values depending on the energy levels involved. The overvoltage values that may be transmitted downstream of the SPD may double over distances of more than 10 m due to resonances associated with the type of electrical installation and the type of equipment. Overvoltages greater than 2.5 kV may then occur and damage equipment if the residual energy is high enough (2.5 kV being the insulation level of most electrical and electronic equipment, or typically 1.5 kV for electrical domestic appliances).

SPDs should be installed in the distribution boards supplying equipment that is sensitive or critical for the activity being carried out (and/or near to equipment with proximity SPDs).

Surge Protective Devices (SPDs)

technical characteristics

Modular SPDs

230/400 V~ power network (50/60 Hz) - Degree of protection IP 20

Surge Protective Devices (SPDs)

technical characteristics

Installation

Associated overcurrent protection

SPDs must be protected by a circuit breaker (or fuses), to provide protection in the event of an overload, which may make the SPD reach its end of life (see selection table p. 10-11). This protective device will be defined to be coordinated or discriminating with regard to upstream protective devices.

Connection principles

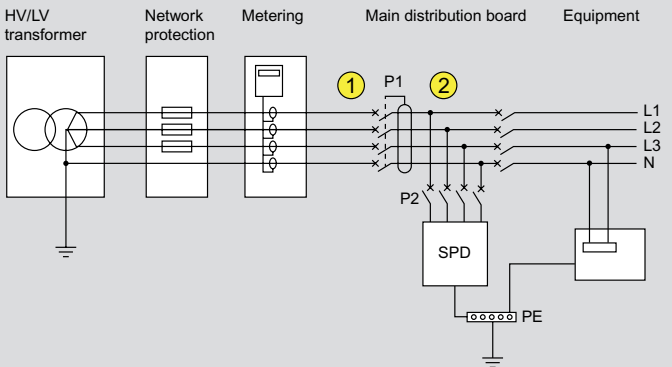

Connection lengths: as short as possible (< 50 cm if possible).
EMC (Electromagnetic Compatibility) rules: avoid loops, fix the cables firmly against the exposed metal conductive parts of the enclosure.

SPD types and earthing systems

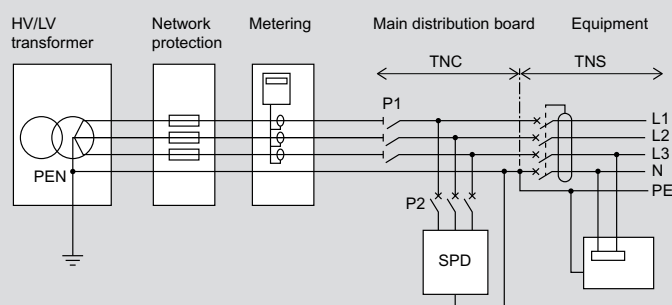

When possible (according to local rules), the SPD and its associated overcurrent protection (P2) should be installed upstream of the main protection (P1) as shown below (according to standards HD/IEC 60364).

SPDs and TT earthing system

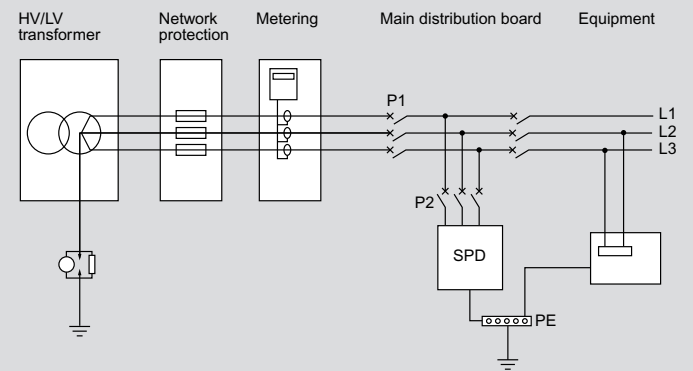

P1: main protection of the installation
SPD: surge protective device with U_c 275 or 320 V recommended
① (upstream of P1): 1P+N/3P+N SPDs only (except for Cat.Nos 0039 51/53/71/73). 1P/2P/3P/4P SPDs and Cat.Nos 0039 51/53/71/73 must always be installed downstream of a residual current device (discriminating or delayed, at the supply end of the installation).
② (downstream of P2): any SPD.

SPDs and TN (TNC, TNS and TNC-S) earthing systems

P1: main protection of the installation
SPD: surge protective device with U_c 275 or 320 V recommended

SPDs and IT earthing system

P1: main protection of the installation
SPD: surge protective device with U_c 440 V ($U_c < 440$ V prohibited)

Coordinating upstream/downstream SPDs

Consists of ensuring that any downstream SPD (in distribution enclosures or proximity SPDs) is correctly coordinated in energy terms with any SPD located upstream (TS 61643-12).

Minimum distances between SPDs

Upstream SPD	Downstream SPD	Min. distance (m)
T1/50 and T1/25	T2/40	10
T1/12.5 and T1/8	T2/40	6
	T2/20, T2/12	8
T2/40	T2/20	4
	T2/12	6
T2/20 and T2/12	Proximity SPD	2

If it is not possible to comply with these distances, insert decoupling inductors on each phase and neutral conductor.

P17 TEMPRA PRO, suitable for all environments

IP 66/67
mobile socket

“ The legrand group, a global specialist in electrical and digital building infrastructure has smart solutions for residential, commercial, hospitality and industrial sectors. Legrand in india has been the leader in protection business for the last four decades. It combines the latest technology to design electrical power distribution systems and guarantees efficient protection and effective service. With smart ideas, sleek designs and sheer simplicity, legrand keeps a close track of changing lifestyle and designs products with high value added content, thereby introducing the all new P17 Tempra Pro. ”

FOR INSTALLATIONS INVOLVING SPECIFIC CONSTRAINTS RELATED TO WATERPROOFNESS OR TEMPERATURE CONDITIONS, BOTH INDOORS AND OUTDOORS

The P17 Tempra Pro range incorporates numerous benefits for optimum commissioning of installations and increased user safety.

More than ever before, the new range is highly recommended for all sites involving specific constraints related to waterproofness, impact resistance or temperature conditions, both indoors and outdoors: shopping centres, hospitals, office buildings, food-processing facilities, industry, transportation, data centres, markets, etc.

P17 TEMPRA PRO, always ensuring continuity of service

By updating its IP44 and IP 66/67 range of industrial sockets, Legrand is meeting the expectations of professional users. New benefits in terms of safety, implementation, design & ergonomics guarantee the longevity of this family of products, which has already proven itself over time.

IP44

SOCKETS FOR INTERNAL AND EXTERNAL USE, PROTECTED AGAINST PROJECTIONS OF WATER (BUT NOT EXPOSED TO DIRECT JETS)

P17 TEMPRA PRO, ensuring a quick installation

As competitiveness is key to success when working on a site, the P17 Tempra Pro range offers an array of essential and intuitive benefits aimed at simplifying every movement, freeing up wiring space and ensuring quick, accurate cable connection under optimum conditions.

Mobile plugs and sockets

MOBILE PRODUCTS
ARE SUPPLIED
ASSEMBLED AND
UNLOCKED

1 QUICK OPENING/CLOSING SYSTEM

Unlocked by pressing with a screwdriver. Marking indicates the location for the locking clip.

Opened by turning the 2 parts in opposite directions.

2 CABLE STRIPPING

Marking allows the user to see quickly the length of cable to be stripped. Option of using cables with ferrules.

Surface mounting sockets

8 CABLE ENTRIES

4 threaded and sealed cable entries at the top and the bottom and marking at the back of the box for ISO cable glands or conduits.

7 EASIER MAINTENANCE

Fixing centres are identical to the old range (70 mm) for the 16 A sockets and marked at the back of the box for 32 A sockets.

3 JUST ONE SCREW PER TERMINAL

A single captive PZ 2 screw, per connection terminal. Same type of screw for both ratings, 16 and 32 A.

4 EASY COVER FIXING

Stainless steel captive screws with mixed head (for cross or flat screwdriver) for a good seal and anti-corrosion resistance.

5 EASY REMOVAL

The active parts of the product can be removed from the base for easier wiring and changing the socket angle.

6 EASY WIRING

Optimum wiring area for easier connections.

P17 TEMPRA PRO, ensuring ease of use and safety

The new P17 Tempra Pro range has been subject to extensive research in terms of design and safety in order to make life safer and easier for the user. Good product gripping, compact dimensions for use in tight spaces, easier handling, etc. Compliance with standards, anti-corrosion treated materials and components, etc. A comprehensive set of solutions which comply with the standards.

AN INNOVATIVE
DESIGN THAT
COMPLIES WITH
STANDARDS
IEC 60309-1 AND 2
AND RESPECTS THE
ENVIRONMENT

1 2 MOUNTING POSITIONS

To solve the problem of limited space, the surface mounting sockets offer 2 different mounting positions (5° or 25°) which allow users to adapt to the space available without changing the box.

2 CABLE GRIP

Captive cable grip with anti-vibration system holds the cable in place permanently.

SAFETY & THE ENVIRONMENT

SAFETY

Connection terminals compliant with standards IEC 60 309 1 & 2

Production sites certified according to ISO 14001 and ISO 9001

Very high resistance to chemical products. Plugs and sockets made of polyamide 6

Anti-corrosion treated screws, stainless steel springs for the socket covers

Resistant to temperatures of -25 °C to + 40 °C

ENVIRONMENT

Halogen-free recyclable materials (silicone, PVC)

Grouped packaging in boxes

PEP products (Eco Passport)

3 EASE OF HANDLING

Gripping areas on the body of the mobile products and the cable grip.

4 OPENING LEVER

For easier connection/disconnection. Cover held open on panel sockets and surface mounting sockets.

5 POSITION MARKING

Information engraved on the ring cover of IP 66/67 products means the user can check quickly whether it is in the open or closed position. Marking area on the shutter of the sockets and on the upper part of the plugs allows easy identification by the user.

P17 TEMPRA PRO,

ensuring customers get exactly what they need

The P17 Tempra Pro range is fully compatible with additional products and accessories from the Legrand industrial socket range and therefore meets the needs of all site configurations. Customised configurations are also available for solutions that are even more suited to your wide-ranging needs.

P17 WORKSITES COMBINED UNITS

Power supply made easy

- Provide temporary power supplies on building sites and for events
- 2 types of worksites combined units:
 - individual units (ready to use or to be equipped)
 - floor cabinets (to be equipped)
- Can take P17 Tempra Pro panel mounting sockets, Arteor sockets outlets (via the dedicated adaptor)
- Easy to hang on a wall without having to open the unit

P17 Tempra Pro IP 44 - LV 16 and 32 A

Characteristics

Terminal connection:

- Panel and surface mounting sockets

16 A: max. 1 x 4 mm² rigid

32 A: max. 1 x 10 mm² rigid

- Appliance inlets:

16 A: max. 1 x 2.5 mm² rigid

32 A: max. 1 x 6 mm² rigid

- Plugs and mobile sockets:

16 A: max. 1 x 2.5 mm² flexible

32 A: max. 1 x 6 mm² flexible

IP 44 according to IEC and EN 60529

IK 08 according to EN 50102 for interlocked switched sockets with small flange

IK 09 according to IEC 62262 and EN 62262

Material: polyamide 6

Self-extinguishing: 850 °C (support of active parts) / 650 °C (plastic housing)

- 25 °C to + 40 °C according to IEC 60309-1
