# Advanced features for greater control and intuitive use

As smart buildings continue to evolve, so do your customers' needs. That's why the KNX Pushbutton Pro T features customizable multifunctionality for increased convenience, innovative touchless capabilities for more hygienic use, and a built-in smart temperature sensor for greater control.

## Full Schneider support

From ordering to installation to usage, Schneider provides expertise and guidance throughout the product lifecycle.

### Touchless control

An optimal solution for public areas, your customers can enable touchless control providing greater safety and hygienic use.

- Activated with a simple hand wave
- Icons indicate when the command has been sent
- No contact button helps reduce germ spread
- Adjustable shutter and lighting control

### Temperature sensor

A built-in sensor provides greater convenience to your customers, ensuring their rooms remain comfortable without interference.

The Pro T works with valve drive controllers that activate the heating, while the temperature can be adjusted in the central system or with a smartphone. It's a perfect solution for areas where your customers don't want people to adjust the thermostats.

- Economical HVAC control
- Optimal temperature setting for commercial buildings
- Easy adjustment from a connected device

### Customizable multifunctionality

The KNX Pushbutton Pro T allows your customers to choose up to four functions to meet their specific needs. After installation, the switch's functionality can still be adjusted to control lights, shutters, or scenes.

No rewiring is needed and the pushbutton's icon foils can be easily swapped.

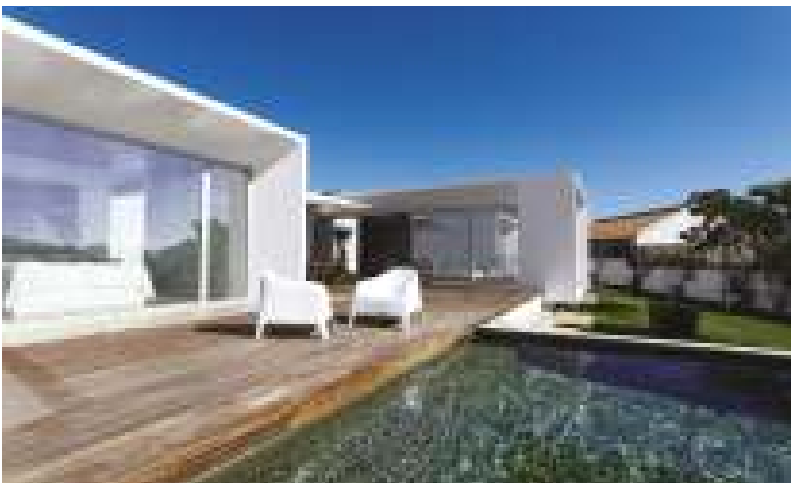

# Ideal for residential and commercial buildings

The KNX Pushbutton Pro T can create a welcoming, healthy, and comfortable environment for small and large buildings.

## Spas and hotels

With the built-in temperature sensor, spa and hotel managers can maintain consistent temperature in rooms, lobbies, and corridors, while the touchless control can help minimize the spread of germs in their facilities.

## Luxury homes

Your residential customers can add high-class room control with multifunctional capabilities for light and shutter adjustments and scene setting. Perfect for transforming the house from a home office to a home theater.

## Nursing homes

Care home directors can make their facilities even more resident-friendly. For example, a proximity sensor enables the Pro T's icons to illuminate automatically upon approach, providing greater ease-of-use.

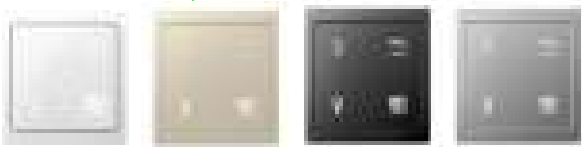

# Appealing switch designs

Available in two customizable System D and System M designs

The Pro T features clear icon images and a flat, conventional design to elegantly blend into your clients' interiors. It is available in two customizable design systems, offering a choice of colors and materials for a truly bespoke switch.

## System D

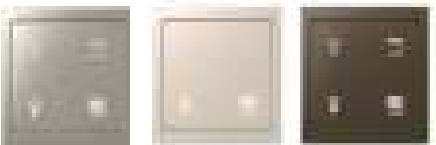

D-Life Thermoplast

D-Life Glass and Stone

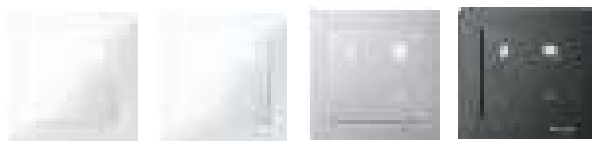

D-Life Metal

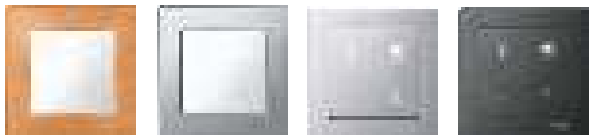

## System M

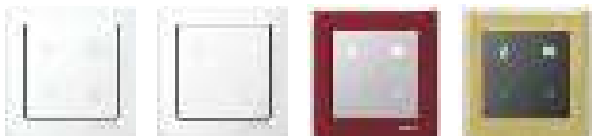

M-Pure, M-Pure Decor

M-Elegance, M-Plan

M-Smart, M-Creativ
