

Meet the future of intelligent building automation

Living and work spaces are becoming more engaging, hyper-efficient, and truly sustainable. Because of this, your customers' expectations concerning building technology are growing beyond aspects of comfort and security. They want a more personalized experience, greater flexibility into the future, and are looking for ways to meet energy efficiency targets.

Buildings account for **36%** of global energy use*

KNX solutions enable a seamless way to digitize buildings, providing a connected system of devices which intelligently communicate with each other to reliably perform tasks, such as switching.

However, these systems can be costly and complicated. So it's key to choose the latest technology and a system that's easy to install, set up, operate, and maintain.

SpaceLogic KNX: a proven solution from a trusted partner

Schneider Electric provides a complete range of KNX solutions, designed to work seamlessly together with the added benefits of simplicity, flexibility, and reliability.

SpaceLogic KNX from Schneider Electric is an interoperable, modular, future-ready system. Whether it's for a small family home or a large office complex, our flexible smart devices are easy to configure, order, and install, and designed to increase comfort and security, while decreasing energy consumption.

A complete KNX system

SpaceLogic KNX consists of a range of products and solutions to create one comprehensive system.

- **Actuators** – the brains of the KNX system, SpaceLogic KNX Actuators turn data into actions,
- **Sensors** – the eyes and ears of the system, collecting information for the system to feed to the actuators,
- **System components** – feed the right level of power to devices connected to the system,
- **Connectivity** – with EcoStruxure™ Building solutions for remote control and monitoring, and integration to third-party systems.

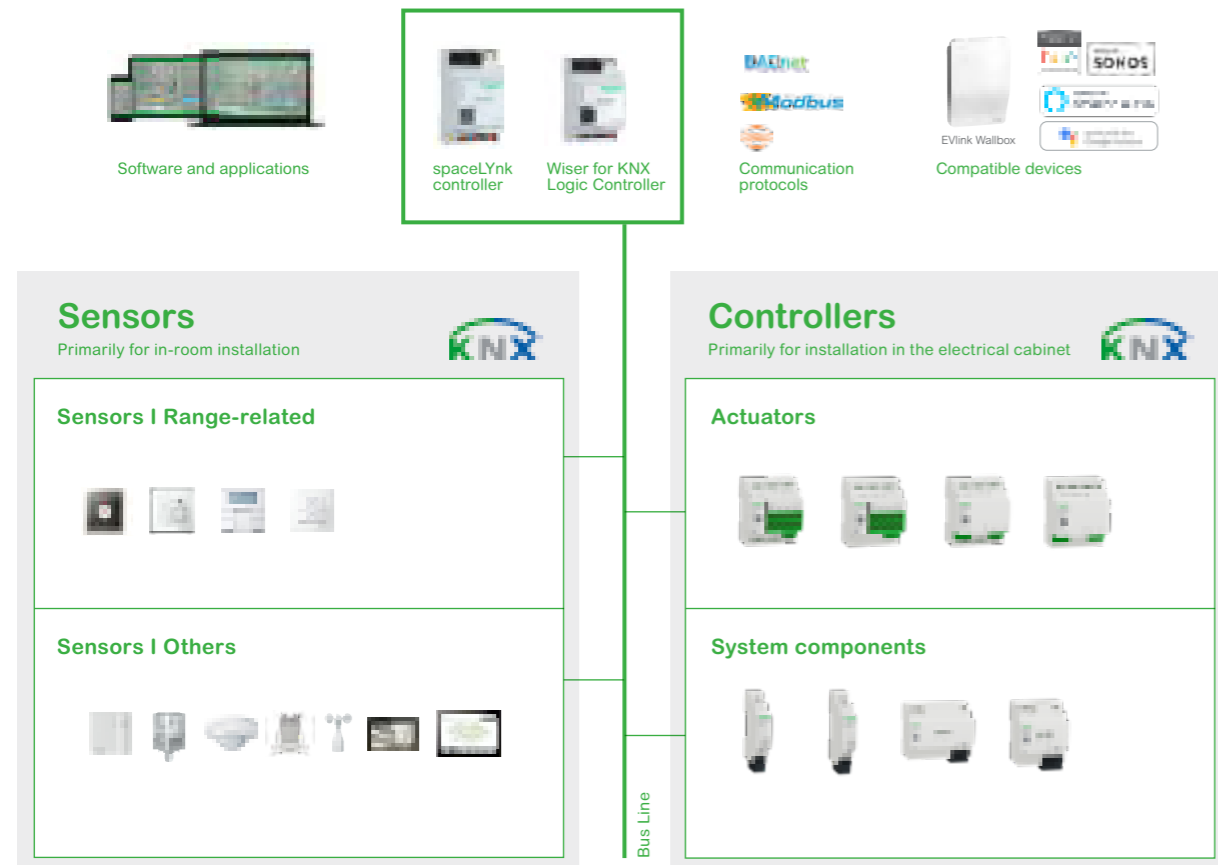

All SpaceLogic KNX solutions are KNX IP Secure compliant and backed by Schneider Electric's world-class cybersecurity.

30 years

SpaceLogic KNX solutions are the culmination of more than a quarter of a century of innovation by Schneider Electric

SpaceLogic KNX system architecture

Simplicity across the whole lifecycle

The SpaceLogic KNX range features powerful products and software that work seamlessly together. Its simplicity allows for greater flexibility across the system, with devices that are:

Easy to manage

From the beginning, SpaceLogic KNX solutions are easy to commission and order via the eConfigure KNX online tool. Going forward, the products are easy to install and sell, flexible to cope with more demanding needs, and future-ready for your peace of mind, and your customers'.

More reliable

Built with a focus on quality and commitment to cybersecurity, SpaceLogic KNX helps you make your projects more efficient by reducing redundant assets. Meanwhile, it enables your customers to lower building operation costs and streamline processes.

Backed by expert support

SpaceLogic KNX solutions benefit from Schneider's extensive support system. You get access to experienced experts through the call center and expanded knowledge via online training programs.

Choose the perfect system for your building

To your customers in small or medium buildings, **SpaceLogic** KNX offers greater efficiency and flexibility.

Hotels

To meet the needs and expectations of the guests, modern building automation is the perfect solution. Not only does it provide a high level of comfort, but also helps improve hotel efficiency and reduce energy consumption.

Office buildings

One of the main reasons to install an automation and control system in offices is for efficiency. A reliable smart building system can help dramatically cut maintenance costs and energy consumption. The end result is a building that's more comfortable for workers and more convenient for building managers. Take heating and cooling control, for example – building managers can schedule based on when people are likely to be in the office/building.

Critical buildings

The enhanced reliability and functionality of KNX devices makes them essential for your critical building customers. In healthcare and hospitals, for example, connected solutions help boost energy efficiency to help meet budgetary requirements, create an at-home experience for patients, and monitor power for essential reliability.

Residential buildings

Provide your residential customers with an interface to control all home functions, which can be used from local and mobile devices such as smartphones, tablets, PCs, and touch panels. Our simple solutions enable monitoring and control of lights, blinds, heating and cooling, energy metering, IP cameras, and scheduling.

Small and medium commercial buildings

Deploying technology designed for large-scale building management in small-scale buildings used to be too complex – until now. With SpaceLogic KNX solutions and eConfigure, you can easily design and fit a smart building system for your small and medium commercial buildings – enabling owners to reduce energy waste while improving comfort for occupants.
