High-end control for modern smart homes

Whether you're looking for lights, blinds, or temperature control, or even an all-in-one solution, the Unica KNX range is ready to meet your needs.

Unica KNX Pushbuttons and Thermostats are available in metallic silver, silver, and wine gold to seamlessly complement any luxurious interior.

Unica KNX Pushbutton

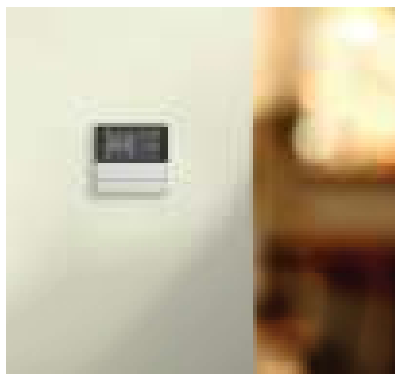

Delivering flexible room control, this pushbutton easily adjusts lights, blinds, and scenarios from just one device. Even after installation, functions can be customized without rewiring. Clear function symbols light up on approach, making this pushbutton a breeze to use.

A set of foils is included with the pushbutton, so you can change the button controls with ease.

Unica KNX Thermostat

The KNX Thermostat unites 3-in-1 functionality, so you can regulate your air conditioning, heating, and ventilation all at once. Designed for intuitive use, a built-in proximity sensor illuminates the display and lets you activate functions with a hand gesture.

Indoor temperature is accurately maintained thanks to an embedded temperature sensor.

Unica KNX Touch Unit

This panel lets you create the perfect ambiance at home: adjust the light color, temperature, and brightness, close the blinds, change the room temperature, and play your favorite music – all with one smartphone-like interface. Customize the main menu to add functions that suit your lifestyle.

Personalize the device's screensaver and background image to add a bespoke touch to your interiors.
